

Supplementary materials

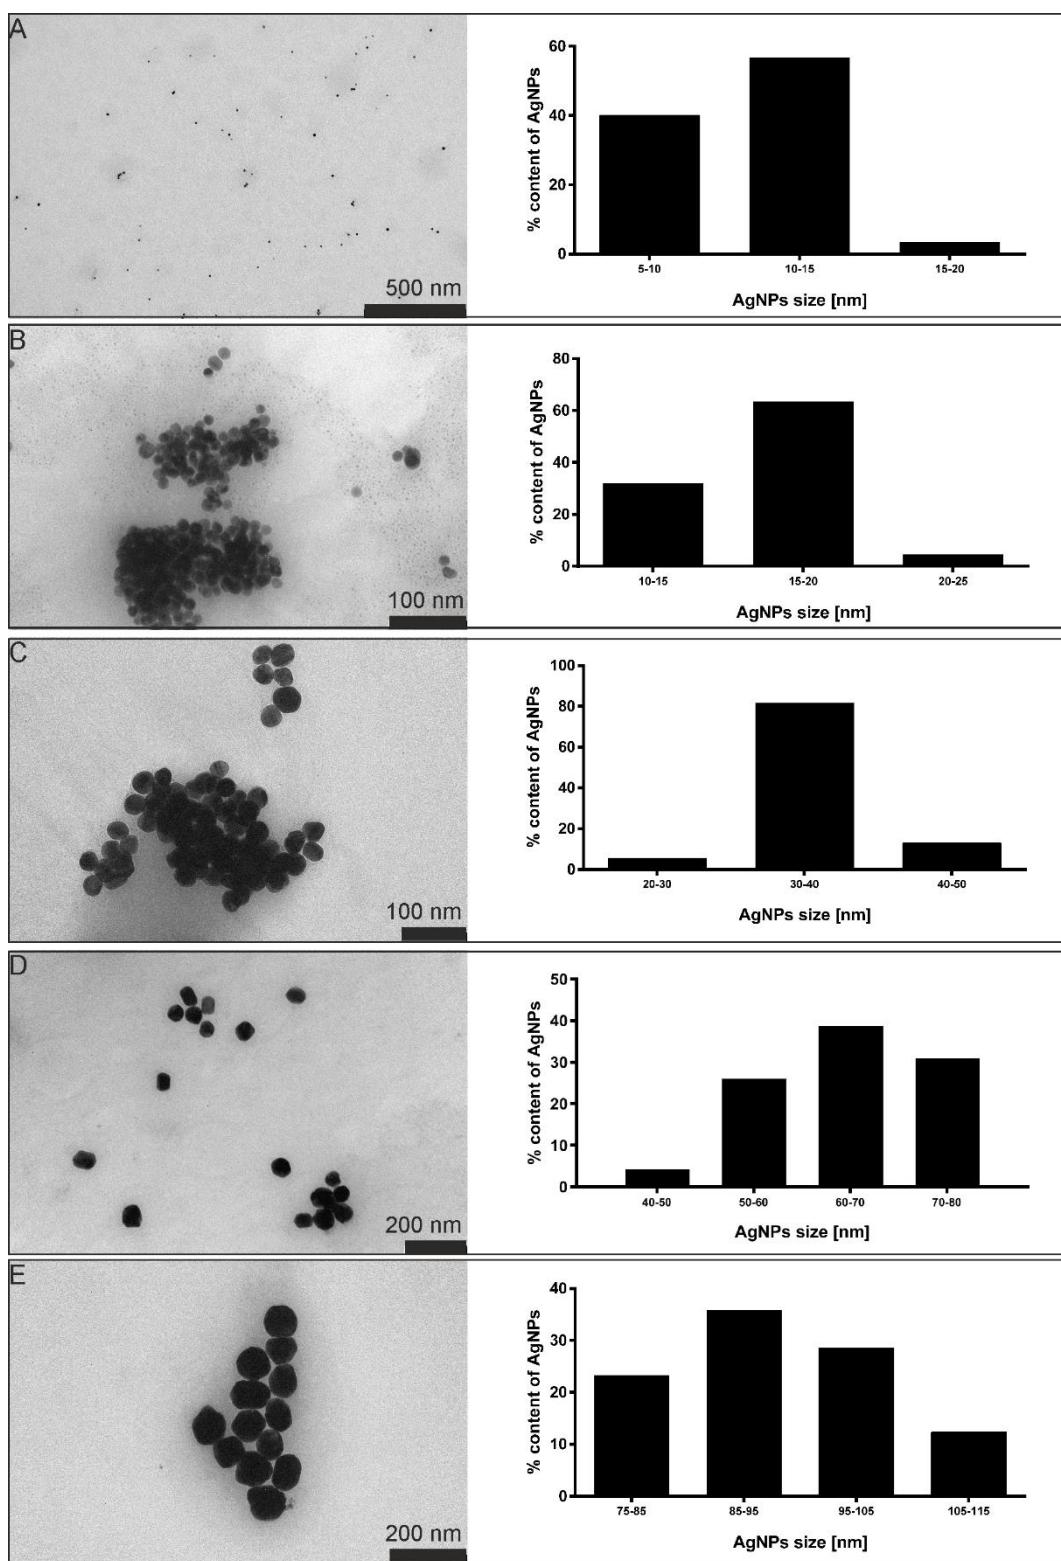

Figure S1. The size distribution of Ag NPs declared as 10, 20, 40, 60 and 100 nm (A, B, C, D, and E).

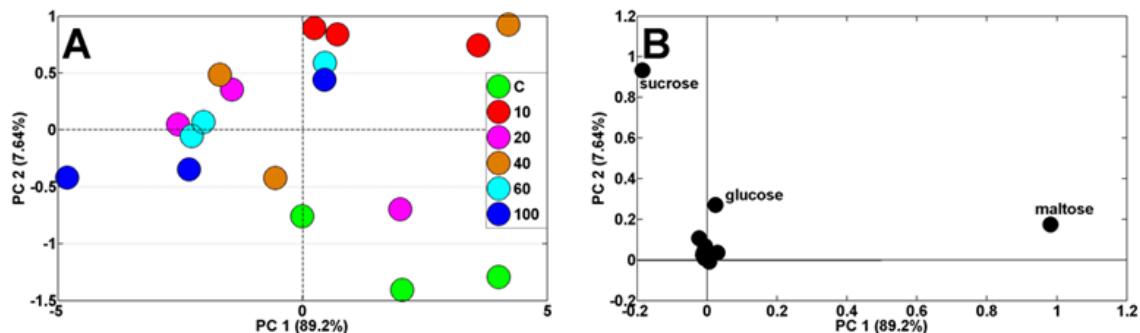

Figure S2. (A) PCA profiles of endosperm metabolites of wheat seedlings developing in double distilled water (control, C) and in the presence of citrate-stabilized Ag NPs with the size of 10, 20, 40, 60 and 100 nm (at the concentration of 20 mg/L each) and (B) PCA loading plots of the polar metabolites.

Table S1. The concentrations of polar metabolites, including total identified polar metabolites (TIPMs), total soluble carbohydrates (TSCs), total amino acids (TAAs), total organic acids (TOAs), and total remaining compounds (TRCs) in roots of 3-day-old seedling of wheat (*Triticum aestivum* L., cv. ‘Ostka Strzelecka’) developing in dd water (control) or in 20 mg/L Ag NPs with a different size (10, 20, 40, 60 and 100 nm). Means of 3 replicates. The same letters by the values indicate no statistically significant differences (P<0.05) based on ANOVA analysis and Tukey’s post- hoc corrections.

| Roots | Control (H ₂ O) | Ag NPs, size, nm | | | | |
|----------------------|-------------------------------|---------------------|---------------------|----------------------|---------------------|---------------------|
| | | 10 | 20 | 40 | 60 | 100 |
| Metabolites | | mg/g DW | | | | |
| TIPMs, including: | 107.70 ^a | 102.09 ^a | 100.63 ^a | 103.23 ^a | 112.82 ^a | 106.09 ^a |
| TSCs, including: | 45.17 ^a | 38.36 ^a | 37.08 ^a | 40.68 ^a | 46.65 ^a | 44.17 ^a |
