

Supplementary Material S1

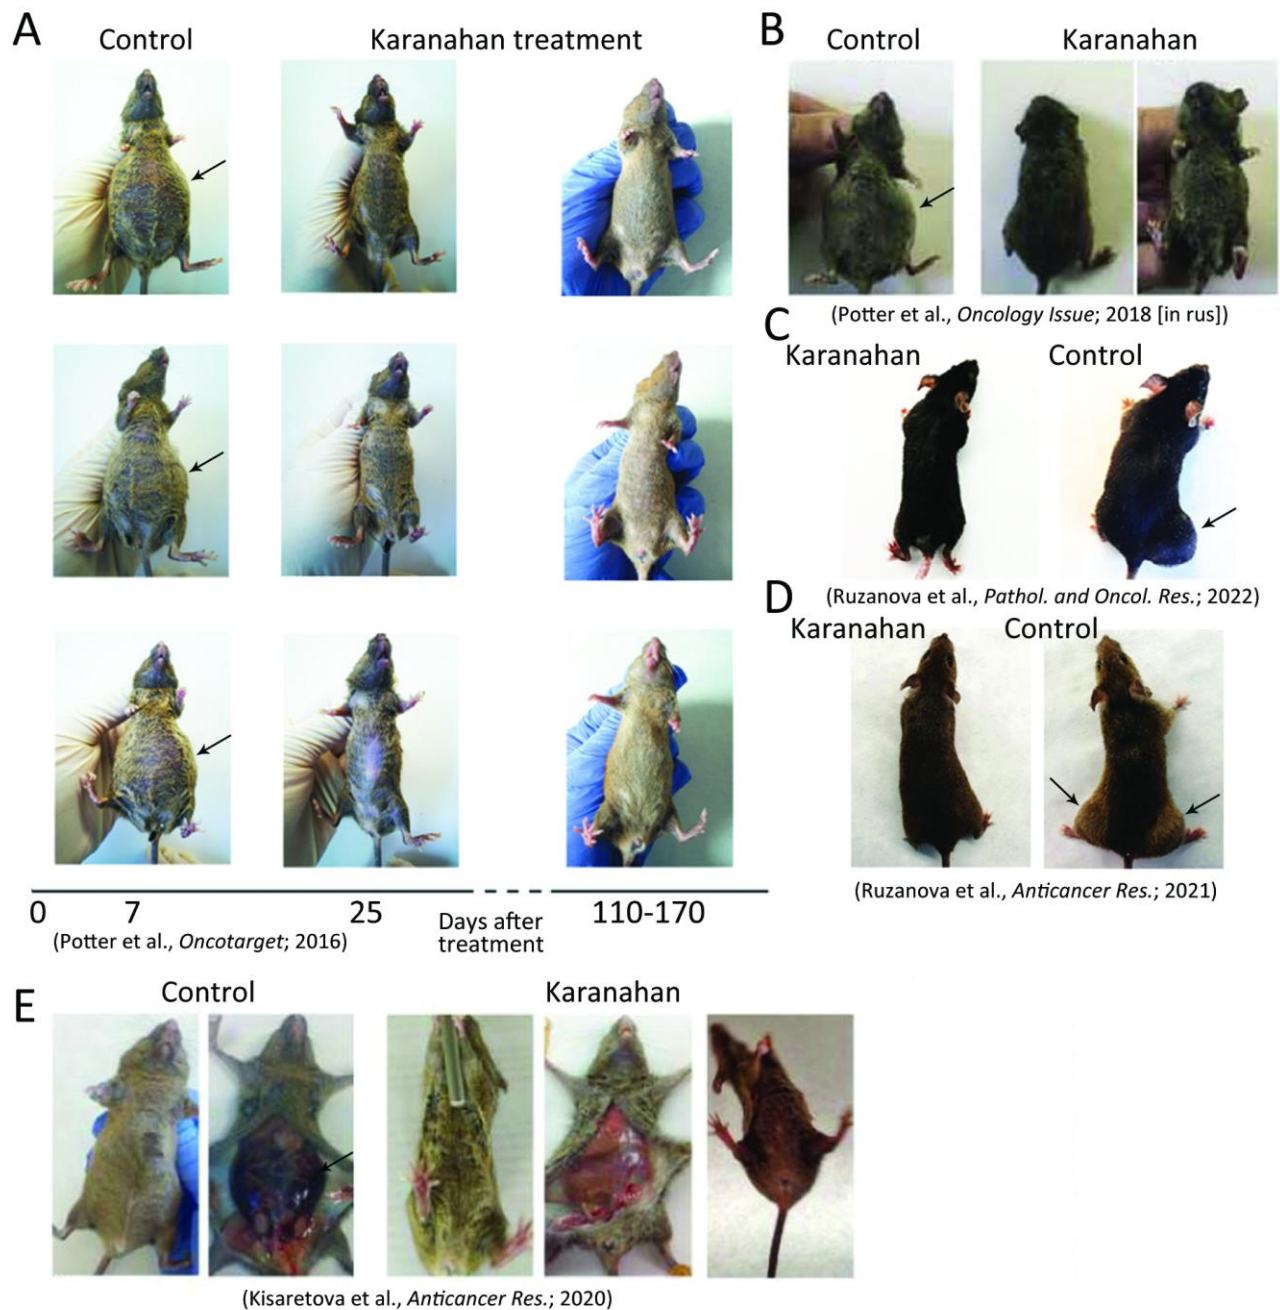

Figure S1. Efficacy of the Karanahan approach shown in different mouse tumor models. Overall visual condition of experimental animals prior and after the therapy is shown. (A) Krebs-2 ascites. Mice before the therapy (left panels), during ascites regression period (~day 25 post the first CP injection, middle panels) and cured mice on day 150 of the experiment (right panels) [11]. (B) Ascitic tumor G-29 [90]. (C) Lewis carcinoma with an intramuscular graft [10]. (D) Solid Krebs-2 tumor. Tumors were grafted intramuscularly in the two hind paws of the mouse [12]. (E) RLS tumor [9]. The presence of a tumor is indicated by an arrow.

Supplementary Material S1 references are presented in the main text of the manuscript.
