

Supplementary Material

Supplementary Figure S1

Figure S1. The protein levels of α -SMA in CFSC cells after TGF- β 1 stimulation and macrocyclic lactones treatment. Western blot analyzed α -SMA protein levels in TGF- β 1-stimulated CFSC cells treated with different doses (6 μ M, 3 μ M) of ivermectin, abamectin, doramectin, selamectin, moxidectin, and eprinomectin.

Supplementary Figure S2

Figure S2. The mRNA expression of SHP in liver after Ccl4 injection and ivermectin treatment. Hepatic SHP expression in mice analyzed by Real-time PCR. Data represent the mean \pm SEM. *** P < 0.001 vs vehicle-treated control group.
