

Figure S3. Morphology of MIC⁻ and MIC⁺-derived clones 13 days after sorting. **(a)** Frequency of small and big ALDH^{high} and ALDH^{low} clones (n=9-32, Fisher's exact test); **(b)** Frequency of small and big CD20⁻ and CD20⁺ clones (n=9-42, Fisher exact test; * - p<0.05, *** - p<0.001 versus WT).
