

Supplement

Pilot study on acute effects of pharmacological intraperitoneal L-homoarginine on homeostasis of lysine and other amino acids in a rat model of isoprenaline-induced takotsubo cardiomyopathy

Dimitrios Tsikas ^{1,*} and Björn Redfors ²

¹ Institute of Toxicology, Core Unit Proteomics, Hannover Medical School, Hannover 30623, Germany

² Department of Cardiology, Sahlgrenska University Hospital, Gothenburg, Sweden

Table S1. Concentrations (in μM) of free amino acids in the homogenates of the analyzed organs of the rats. See Table 1.

Figure S1. Concentration of the sum of all amino acids (All AA), of lysine (Lys), of all amino acids except for Lys (AA-Lys) in all organs available, and of all amino acids except for Lys in the four organs of six rats (AA-Lys (4)). See also Table S1.

Figure S2. Spearman correlation coefficients for free tissue amino acids in lung, kidney, heart and liver of the study rats. The data points for Sarc and hArg are encircled and given in blue and red, respectively. Explanation of the amino acids: Ala, alanine; Thr, threonine; Gly, Glycine; Val, Valine; Ser, Serine; Sarc, sarcosine; Leu+Ile, leucine+isoleucine; GAA, Guanidinoacetate; Asp+Asn, aspartate+asparagine; OH-hydroxyproline; Pro, proline; Met, methionine; Glu+Gln, glutamate+glutamine; Orn+Cit, ornithine+citrulline; Phe, phenylalanine; Tyr, tyrosine; Lys, lysine; Arg, arginine; hArg, homoarginine; Trp, tryptophane; ADMA, asymmetric dimethylarginine.

Figure S3. Concentration of free Lys in homogenate samples of four rats (#3, #2, #18, #13) administered with hArg (t=0 min) and isoprenaline (t = 15 min) measured at the time of death. See also Table S1.
