**ALOX15B**

**Figure S1. Bioinformatic analysis of the promoter regions of *ALOX15* and *ALOX15B* genes.** (A and B) Bioinformatic analysis of the promoter regions (-650bp ~ +250bp) of *ALOX15* (A) and *ALOX15B* (B) genes revealed multiple putative binding sites for GR and p300. Blue box: GR binding sites; Red box: p300 binding sites. Arrows indicate primer aligning positions in ChIP assay. TSS, transcription start site.

### *EP300*

**Figure S2. Bioinformatic analysis of the promoter region of *EP300* gene.** Bioinformatic analysis of the promoter regions (-640bp ~ +200bp) of *EP300* gene revealed multiple putative binding sites for CREB. Boxed red letters indicate putative CREB binding sites. TSS, transcription start site. Arrows indicate primer aligning positions in ChIP assay.

**Table S1. Demographic and clinical characteristics of recruited pregnant women**

	<b>TNL (n=7)</b>	<b>TL (n=7)</b>	<b>P value</b>
Maternal age (year)	33.00±2.52	32.00±2.58	0.48
Gestational age at delivery (week)	38.96±0.23	39.00±0.49	0.85
Delivery mode			
Vaginal (%)	0	100%	N/A
C-section (%)	100%	0	N/A
Membrane rupture			
SPOM (%)	0	100%	N/A
ARM (%)	100%	0	N/A
Gravidity median (range)	2 (1-5)	2 (1-2)	0.27
Parity median (range)	1 (1-2)	1 (1-2)	0.12
Fetal gender (male/female)	3/4	3/4	0.78
Birth weight (g)	3395.29±207.12	3255.00±143.03	0.17

TNL, term not in labor; TL, term in labor; ARM, artificial rupture of membranes; C-section, caesarean section; SROM, spontaneous rupture of membranes with labor. Maternal age, gestational age at delivery, and birth weight were expressed as mean ± SD and analyzed with unpaired Student's t-test. Gravidity and parity were expressed as median (min–max) and analyzed with the Mann–Whitney U test. Fetal gender was analyzed with Chi-square test. Significance was set at P < 0.05.

**Table S2. Primer sequences used in qRT-PCR and ChIP.**
