

**Supplemental Table S2**

**The 51 genes differentiating responders and nonresponders in the RFS dataset and their performance in the PCR dataset**

Only six genes, labeled with green font and highlighted, were significant in both datasets. For the rest of the genes in the PCR dataset, the association was either nonsignificant or the direction was reversed (Fold Change < 1); thus, gene expression was higher in responders.

GENE SYMBOL	RFS						PCR		
	N_nonresp	N_resp	Fold Change	MannW_p	ROC AUC	ROC_AUC_p	Fold Change	ROC AUC	ROC_AUC_p
