

Figure S2 : mRNA enrichment in polysomes of tm-treated versus untreated cells, with or without MRPS15 immunoprecipitation.

mRNA fold change of input (a) or MRPS15 elution (b) samples were compared between treated (tm) and untreated (NT) condition and represented in histograms. Data represent at least 3 independent biological replicates for each condition; * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$, **** $p < 0.0001$.
