**Figure S1.** Effects of *Porphyra* cover on interstitial mussel bed invertebrates. Ordination of invertebrate assemblage composition between the *Porphyra*-removal treatment (filled symbols) and controls (empty symbols) at the three experimental sites. Sample ordination based on species abundance using non-metric multidimensional scaling and the Bray-Curtis index of dissimilarity.

**Figure S2.** *Porphyra*-related patchiness in interstitial invertebrate distribution. Ordination of invertebrate assemblage composition between the *Porphyra*-covered patches (empty symbols) and exposed mussel bed areas (filled symbols) at the four sampling sites. Sample ordination based on species abundance using non-metric multidimensional scaling and the Bray-Curtis index of dissimilarity.

**Table S1.** Mean (SD) densities of invertebrate species found in the *Porphyra*-removal experiment that were not subject of univariate analyses due to low overall density (< 1 individual per sample) and/or scattered representation across sites/dates (n = 8).

Species	Taxa	Punta Cantera, 2011		Las Brusquitas, 2015		Copacabana, 2017

<i>Hallosydnella australis</i>	AP	-	0.14 (0.38)	-
Chironomidae (larvae)	ID	0.14 (0.38)	-	-

**Table S4.** Two-way PERMANOVA comparing the composition of interstitial invertebrate assemblages across Treatments (*Porphyra* removal vs. Control plots) and experimental Sites/Dates (Punta Cantera/2011, Las Brusquitas/2015, and Copacabana/2017) when excluding the amphipod *Hyale granicornis* from the analysis. Asterisks indicate significant effects.

Source	MS	df	F	p
Treatment	0.25	1	1.83	0.128
Site/Date	2.97	2	21.73	<0.001*
Treatment X Site/Date	0.21	2	1.54	0.164
Residual	0.14	42		

**Table S5.** Two-way PERMANOVA comparing the composition of interstitial invertebrate assemblages across Patch Types (*Porphyra* covered vs. Exposed mussel bed areas) and experimental Sites/Dates (Punta Cantera/2011, Las Brusquitas/2015, and Copacabana/2017) when excluding the amphipod *Hyale grandicornis* from the analysis. Asterisks indicate significant effects.

Source	MS	df	F	p
Treatment	0.14	1	0.86	0.494
Site/Date	2.08	3	13.09	<0.001*
Treatment X Site/Date	0.28	3	1.74	0.056
Residual	0.16	40		

**Table S6.** Names and taxonomic authorities of the taxa analyzed in this study, listed in the order they appear in the text and Tables S1-S3.

Taxa
<i>Porphyra</i> C.Agardh, 1824
<i>Brachidontes rodriguezii</i> (d'Orbigny, 1842)
<i>Hyale grandicornis</i> (Krøyer, 1845)
<i>Siphonaria lessonii</i> Blainville, 1827
<i>Perinereis anderssoni</i> Kinberg, 1866
<i>Sphaeroma serratum</i> (Fabricius, 1787)
<i>Halicarcinus planatus</i> (Fabricius, 1775)
<i>Boccardia polybranchia</i> (Haswell, 1885)
<i>Syllis prolixa</i> Ehlers, 1901
<i>Protoariciella uncinata</i> Hartmann-Schröder, 1962
<i>Idotea balthica</i> (Pallas, 1772)
<i>Caprella dilatata</i> Krøyer, 1843
<i>Syllis gracilis</i> Grube, 1840
<i>Hallosydnella australis</i> (Kinberg, 1856)
<i>Lumbrineris tetraura</i> (Schmarda, 1861)
