

Table S1. Percent similarity of strains assigned to *Leptolyngbya* and *Plectolyngbya*, with sister taxa *Tapinothrix*, *Romeria*, and a *Leptolyngbya* species outside of *Leptolyngbya sensu stricto*. Values <94.5 generally indicate different genera, while values <98.7 are typically considered different species. The three clades in *Leptolyngbya sensu stricto* identified as nodes in the phylogenetic analysis are indicated by different colored shading.
