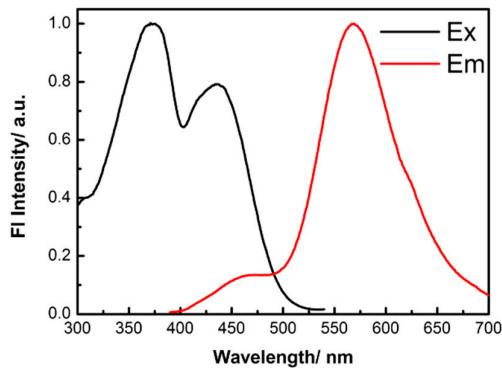

Figure S1. Excitation (Ex) and emission (Em) spectra of GO, which is the product of GP (10 μ M) reacting with GSH (1000 μ M). The excitation wavelength of emission spectrum is 370 nm and the settled emission wavelength of excitation spectrum is 569 nm.

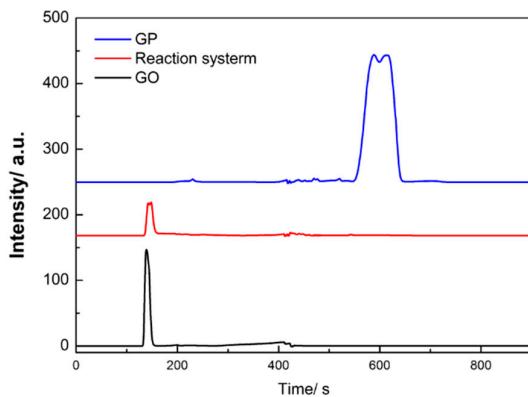

Figure S2. HPLC (High Performance Liquid Chromatography) of GP (Blue line), GO (Black line) and detecting reaction system (Red line). Acetonitrile acts as the mobile liquid phase and the velocity was 0.4 ml/min.

Table S1. Limit of detection (LOD), responding time and Sticks shift of reported probes for GSH.
