

Supplementary
S1. Water quality information

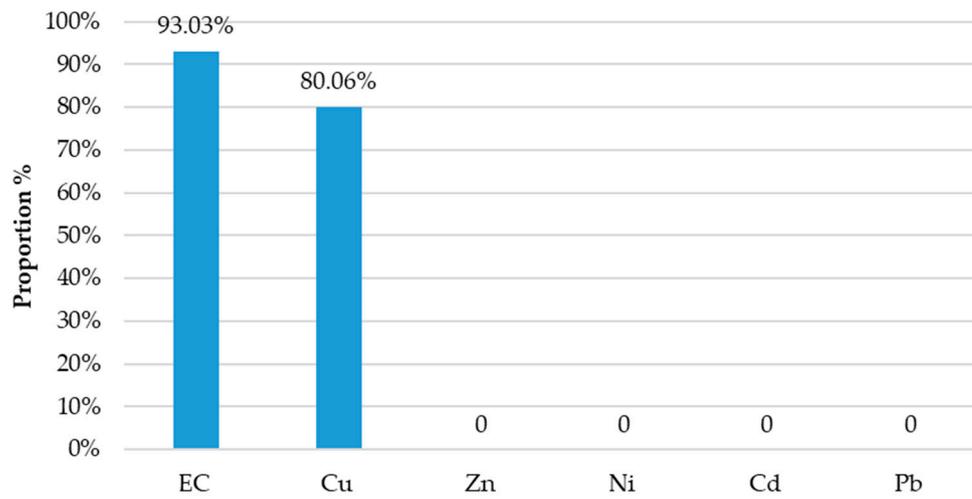

Figure S1 proportions of Electrical Conductivity (EC), Cadmium (Cd), Copper (Cu²⁺), Lead (Pb), Nickel (Ni), Zinc (Zn) greater than the standards.

S2. WASP model parameters

The model parameters and segment information are listed in Tables S1-S7. The parameters and segments are set and reported in the same study area based on real measurements (Tables S1-S7) (Taiwan Council of Agriculture, 2016) [1]. The calibrations are based on the Taiwan Council of Agriculture (2016) report on modeling procedures of the WASP (<https://www.epa.gov/ceam/modeling-products-assess-exposures>). All procedures for data and measurements are presented in the user's guide of the model [2]. In this study, the EC and Cu²⁺ concentrations were simulated at each segment based on the parameters and data from the report (Tables S1-S7). Figure S2 shows the model validation for the EC and Cu²⁺. The R2 values are 0.9986 and 0.9682 for EC and Cu²⁺, respectively. The Mean Absolute Percent Error (MPAE) equation is as follows. The value of MPAE is less than 10% that indicates high accurate simulation [3].

$$MAPE = (\sum |measurements - simulated\ value| / |measurements|) 100 / n \quad (S1)$$

Note: n=number of segments.

Table S1. Model data set and parameters

Data set	Parameters
Model type	Simple Toxicant
Start date	1/1/2017
Start time	00:00
End Date	2/1/2017
End time	00:00
Hydrodynamics	1-D Network Kinematic wave
Solution Technique	Runga-Kutta
Bed volumes	Static
Fraction of max time step	0.01
Max time step	0
Min time step	0.0001

Taiwan Council of Agriculture (2016)

Table S2. Segment information

Segments	Value
Segments	as Table S7 Segment information
Initial Concentrations	
Toxicant: Seg1~6	200
Silts and fines: Seg1~6(20); Seg7~12	10000
Fraction dissolved (Toxicant, Silts and fines, Sand, Organic solids, Tracer 1&2)	1

Taiwan Council of Agriculture (2016)

Table S3. Parameter scale factor

Parameter data	Scale factor
Partition Coefficient to Silts and fines(L/kg)	1258.9254

Taiwan Council of Agriculture (2016)

Tables S4. Constant parameters

Constants data	Value	Min	Max
Constant group: Solids			
Biotic Solids Production Rate (g/m ³ -day)	2	0	5

Organic Matter Dissolution Rate Constant (1/day)	0.004	0	0.5
Organic Solids Fraction Ash (Ash/DW)	0.1	0	1

Taiwan Council of Agriculture (2016)

Table S5. Volumes

Loads	CMS	kg/day
Toxicant:

Step 6-1: Since there are no coins at the address of this station, the Issuer sends a coin to the station address. (Issuer -> ['R12'])

Step 6-2: The upstream area is checked and M02 is detected to be polluted; it is therefore considered that this pollution event originates at M02 and affects R12. The coin is thus sent to M02. (R12 -> ['M02'])

Step 7 : Operation at M02

Step 7-1: Since there are coins at the address of this station, there is no need for the Issuer to send a coin to this station.

Step 7-2: The upstream area is checked and there is no station polluted; it is therefore considered that M02 is the source of this pollution event and the coin is sent to the collection address. (M02 -> [])
