1.1 Supplementary Figures

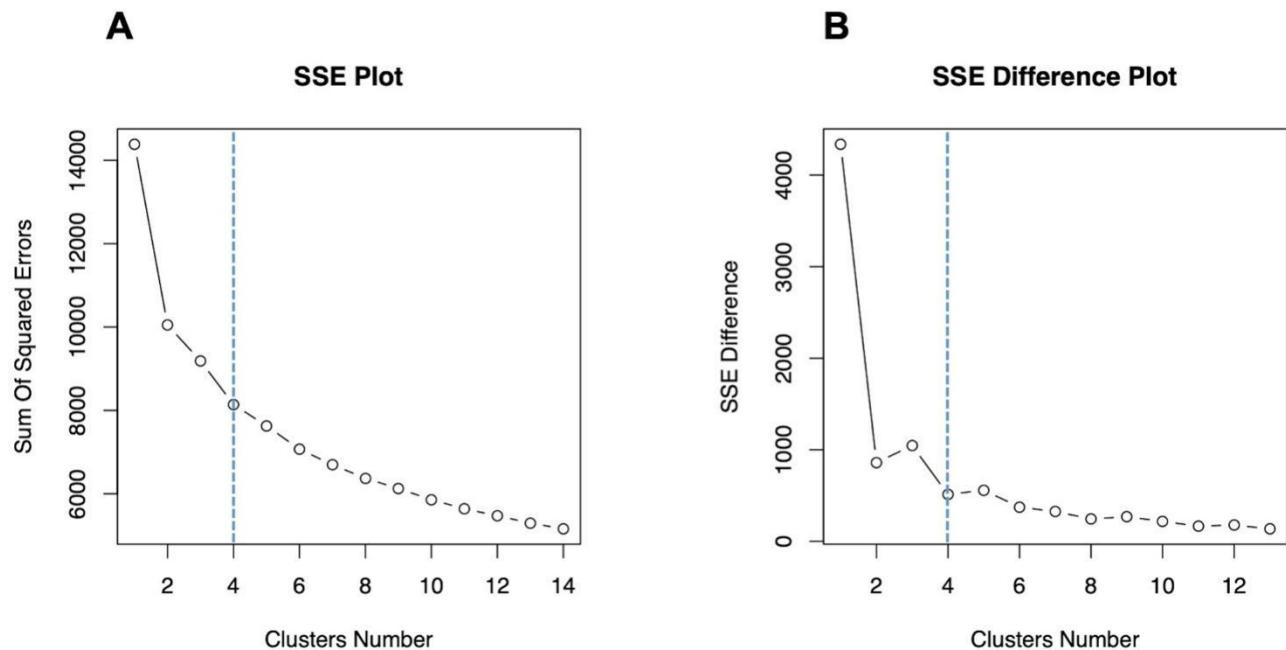

FIGURE S1 Plots of sum of squared errors (A) and SSE difference (B) of k-means with $k=1,2,\dots,14$. We choose $k=4$ at the elbow of the curve.

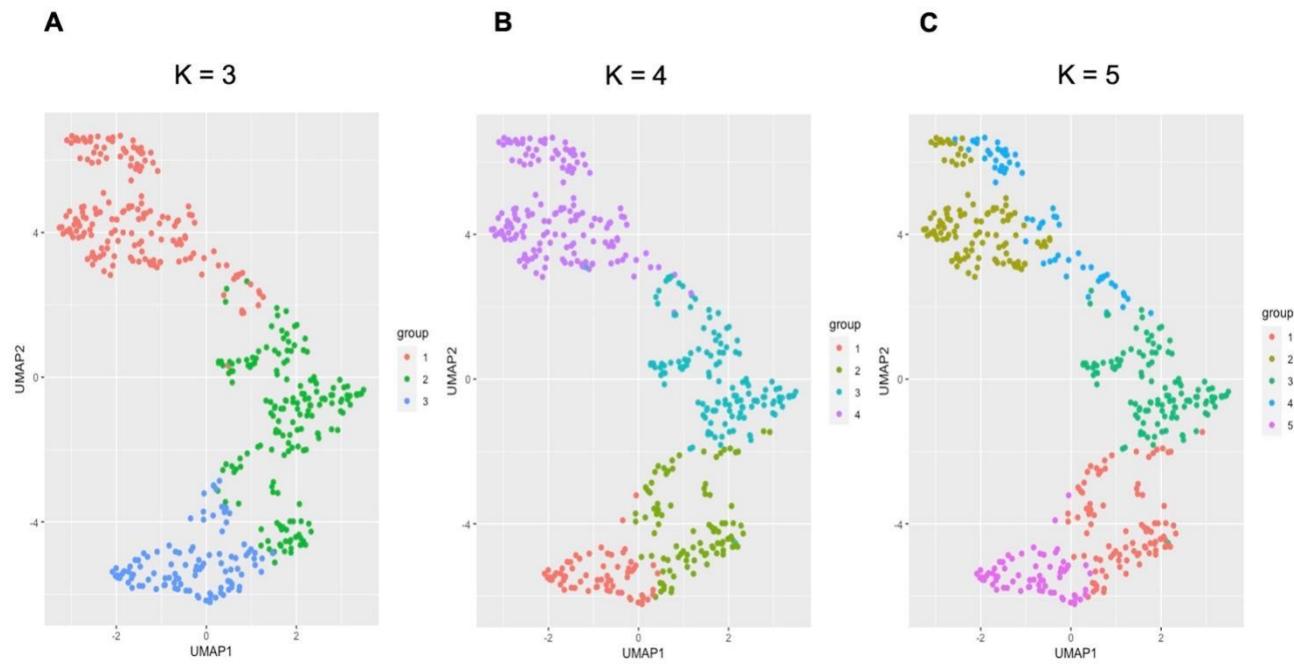

FIGURE S2 The UMAP plot of k-means clustering results with k=3, 4, 5.

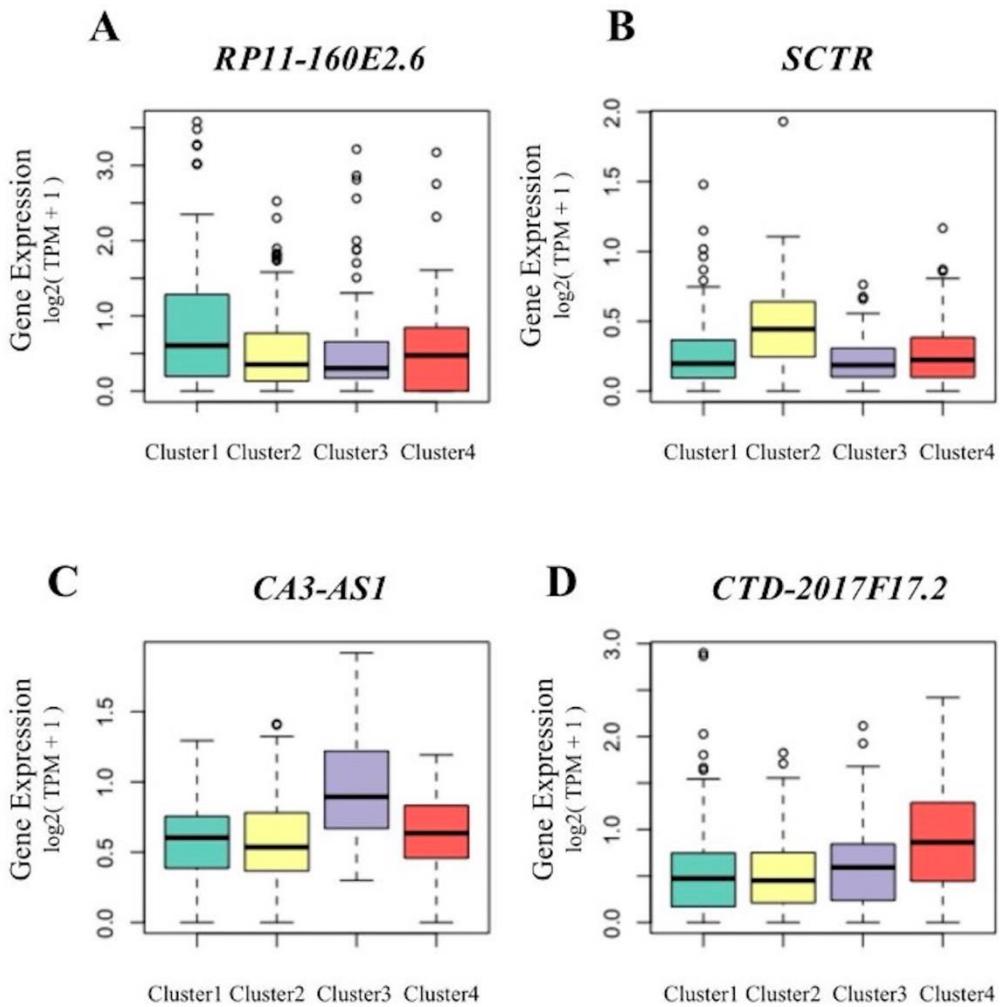

FIGURE S3 The boxplot of the top genes which specify to Cluster 1 (A), Cluster 2 (B), Cluster 3 (C), Cluster 4 (D) respectively. The circles in the boxplot represent outliers in the data.

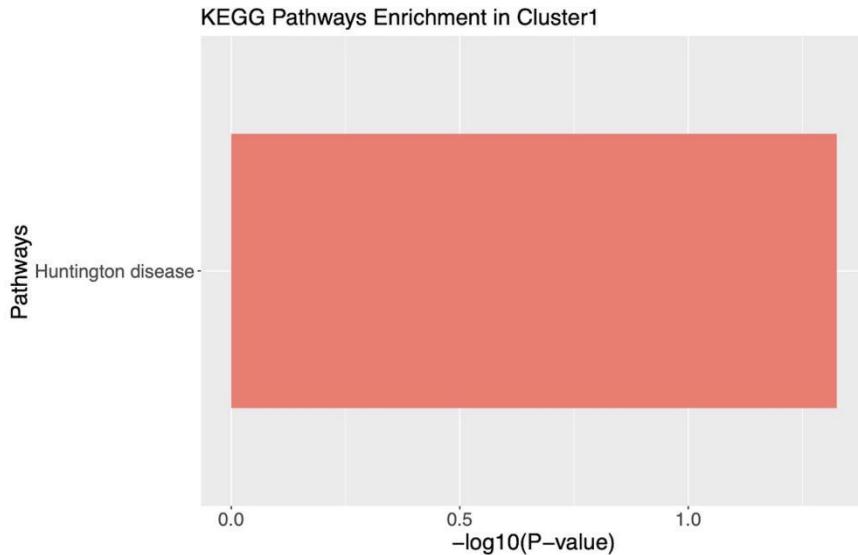

FIGURE S4 Visualization of enrichment analysis in Cluster1. Bar graph of significant pathways in KEGG analysis.

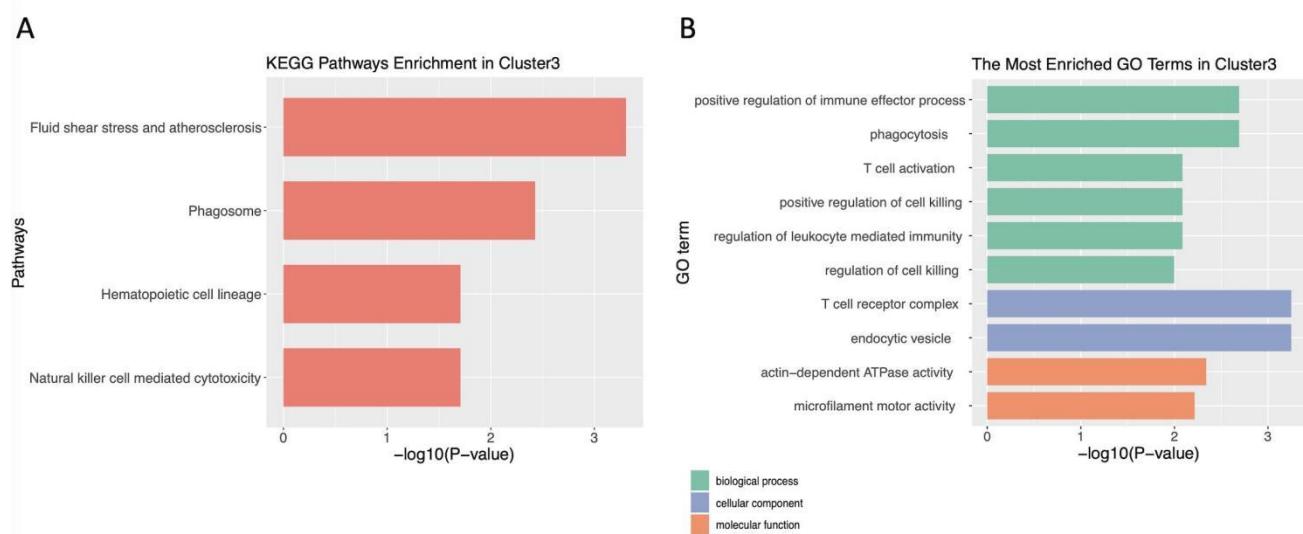

FIGURE S5 Visualization of enrichment analysis in Cluster3. (A) Bar graph of significant pathways in KEGG analysis (B) Bar graph of significant pathways in GO analysis.

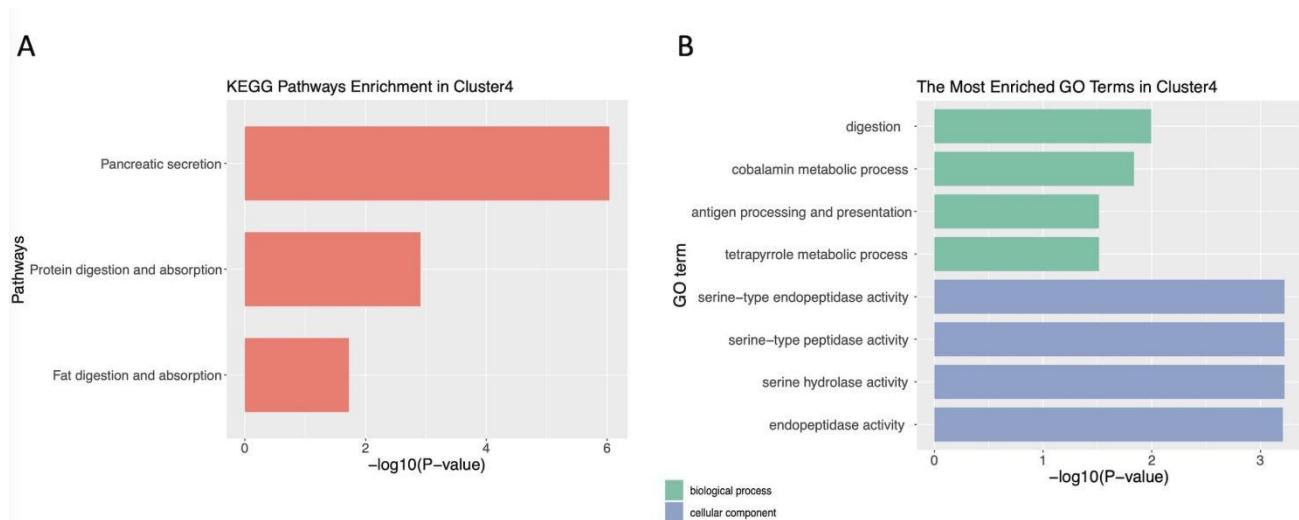

FIGURE S6 Visualization of enrichment analysis in Cluster4. (A) Bar graph of significant pathways in KEGG analysis (B) Bar graph of significant pathways in GO analysis.

1.2 Supplementary Tables

Table S1 Explanations of image features.

Feature Type	Feature Name	Feature Explanations
Shape	Centroid	Centroid of the object
	Circularity/Roundness	Quantify how close the object should be to a true circle. It is the ratio of the area of the equivalent hypersphere to the measured area of the object.
	Elongation	Ratio of the longest physical size of the object on one dimension and its smallest physical size
	EquivalentEllipsoidDiameter, EquivalentEllipsoidDiameter0, EquivalentEllipsoidDiameter1	Diameters of the ellipsoid of the same size and the same ratio on all the axes of the object
	EquivalentSphericalPerimeter	Equivalent perimeter of the hypersphere of the same size of the object

	EquivalentSphericalRadius	Equivalent radius of the hypersphere of the same size of the object
	FeretDiameter	Diameter in physical units of the sphere which include all the object
	Flatness	Degree to which the object approximates the hyperplane
	MajorAxis, MinorAxis	Longest/shortest diameter of the object
	Perimeter	Perimeter of the object
	PerimeterOnBorderRatio	Ratio of perimeter of object which are on the border of the image to the whole perimeter
	PrincipalAxes	Principle axes of the object
	PrincipalMoments, PrincipalMoments0, PrincipalMoments1	Principle moments of the object
Size	AreaInPixels, NumberOfPixels	Area of the object in terms of number of pixels
	NumberOfPixelsOnBorder	Number of pixels of object which are on the border of the image
	PerimeterOnBorder	Perimeter of object which are on the border of the image
	PhysicalSize	Size of the object in physical unit
Texture/Intensity	Intensity_[Mean/Max/Min/Std] or Mean[R/G/B] or Std[R/G/B]	Mean/Max/Min/Std statistics of the intensity values in the object of R/G/B channels

	IntensityKurtosis	Kurtosis of the intensity values in the object of R/G/B channels
	IntensityEnergy, IntensityEntropy	Energy and entropy of the intensity values in the object of R/G/B channels
	GradientEnergy, GradientEntropy	Energy and entropy of the intensity values in the gradient image of object of R/G/B channels
	GradientMean, GradientStd, GradientSkewness, GradientKurtosis	Mean/Std/Skewness/Kurtosis of the intensity values in the gradient image of object of R/G/B channels
	CannyMean	Average of canny value of the object
	CannyNonZero	Number of pixel with nonzero canny value of the object
	cytoCannyMean	Average of canny value of the cytoplasm
	cytoCannyNonZero	Number of pixel with nonzero canny value of the cytoplasm
	cytoGradientEnergy, cytoGradientEntropy	Energy and entropy of the intensity values in the gradient image of cytoplasm of R/G/B channels
	cytoGradientMean, cytoGradientStd, cytoGradientSkewness, cytoGradientKurtosis	Mean/Std/Skewness/Kurtosis of the intensity values in the gradient image of cytoplasm of R/G/B channels
	cytoIntensityEnergy, cytoIntensityEntropy	Energy and entropy of the intensity values in the gradient image of cytoplasm of R/G/B channels
Distance	density_neighbors_in_distance_[0, 1, 2, 3, 4]	Neighbor count within given radius

For instance, the most significant pathway ($p\text{-value} = 5.13\text{E-}6$) related to Cluster 2 is “Transcription regulation by the AP-2 (TFAP2) family of transcription factors”. Five proteins (TFAP2A, TFAP2B, TFAP2C, TFAP2D, TFAP2E) are included in the AP-2 family of transcription factors. The AP-2

family of transcription factors regulates the gene expression by interacting with the transcriptional co-factors of the CITED family and recruiting transcription co-activators to TFAP2-bound DNA elements. The AP-2 family relates to breast cancer and mammary development. De et al. [1] had reported that TFAP2C regulates EGFR in luminal breast cancer as well as HER2 breast cancer. Cyr et al. [2] had reported that the knockdown of TFAP2C in luminal breast carcinoma cells induces the loss of luminal-associated gene expression in contrast to the gain of the basal-associated gene expression. It also pointed out that TFAP2C is the key factor to maintaining the luminal breast carcinoma, and Tcfap2c influences the luminal cells in the mammary. While Bogacheck et al. [3] had reported that the sumoylation of TFAP2A maintains the basal breast cancer phenotype. Also, the most significant pathway (p -value = 1.78E-3) related to Cluster 3 is "ATF4 activates genes in response to endoplasmic reticulum stress". ATF4 is a transcription factor and ATF4 activates 6 genes expression including IL-8, MCP1, IGFBP-1, CHOP, HERP1, and ATF3. Marchand et al. [4] had reported that insulin-like growth factor binding protein 1 (IGFBP1) is induced during the Endoplasmic reticulum (ER) stress in human hepatocytes. It pointed out that the region of the human IGFBP1 gene containing an activating transcription factor 4 (ATF4) composite site is required for the activation of ER stress. Armstrong et al. [5] had reported that ATF4 induces the ER stress-induced cell death of neuroectodermal tumor cells which induced by the chemotherapeutic agents fenretinide and bortezomib.
