							T0: (P=0.407) T0-T1: (P=0.142)
Kawashima et al. (2022) [61]	12 (12)	Stride Management Assist exoskeleton (Honda R&D); Gait	Hospital RCT T0: Baseline measurement T1: Post-intervention measurement (3 months)	SMA group (G1); Control group (G2);	10 gait training sessions with the SMA (30 min each) for 3 months (step training and overground walking) AND Compare immediate effect with/without SMA during the 10MWT (first 6 times) (device off- to device on- mode) I1= device off I2= device on 10 gait training sessions (30 min each) for 3 months (step training and overground walking) (G2)	Comparison of effects within- and between- groups after training intervention: FoG-Q (max 24) 10MWT (s)	Values are mean (SEM) G1: T0= 12.2 (1.6) vs T1= 11.4 (1.7) (P=0.338) G2: T0= 8.4 (1.2) vs T1= 10.6 (1.8) (P=0.239) Between-group difference in change: P=0.183 G1: T0= 12.5 (2.5) vs T1= 11.5 (2.4) (P=0.206) G2: T0= 13.7 (2.1) vs T1= 13.3 (1.7) (P=0.648) Between-group difference in change: P=0.488
Osteoarthritis							
Koseki et al. (2021) [42]	21 (NA)	Honda Walking Assist; assist hip flexion and extension	Hospital Quasi-experimental design; T0: Pre- TKA measurement T1: Week 2 following TKA T2: Week 4 following TKA T3: Week 8 following TKA	HWA group (G1); Control group (G2);	Conventional rehabilitation + HWA gait training from week 1 to 5 after TKA Total of 17-20 gait training sessions (each around 20-min), with 4-5 sessions per week Conventional rehabilitation	WOMAC-f	T0: G1= 65.51 (±22.24 vs G2= 69.39 (±12.92) (P=0.623, ES= 0.21) T1: G1= 69.79 (±15.17) vs G2= 66.82 (±18.15) (P=0.682, ES=0.18) T2: G1= 87.17 (±8.63) vs G2= 81.95 (±10.71) (P=0.223, ES=0.54) T3: G1= 94.79 (±3.62) vs G2= 84.99 (±4.72) (P<0.001, ES=2.33)

Setoguchi et al. (2022) [53]	47 (NA)	HAL;	Hospital RCT T0: Preoperatively T1: 1 week postoperatively T2: 3 weeks postoperatively	HAL group (G1);	HAL gait training: 3 sessions per week (40-min each) for 6 weeks in total + typical physical therapy on days without HAL training	Harris hip score: - function	<p>T0: G1= 35.5 (±4.78) vs G2= 34.8 (±6.20) (P=0.832)</p> <p>T2: G1= 39.9 (±4.85) vs G2= 42.5 (±3.78) (P=0.336)</p> <p>Within group changes: G1: T0-T2: P<0.05 G2: T0-T2: P<0.05</p> <p>T0: G1= 4.3 (±0.46) vs G2= 4.3 (±0.46) (P=1.000)</p> <p>T2: G1= 4.8 (±0.46) vs G2= 4.9 (±0.35) (P=0.535)</p> <p>Within group changes: G1: T0-T2: P>0.05 G2: T0-T2: P<0.05</p> <p>T0: G1= 15.0 (±7.33) vs G2= 13.6 (±20.58) (P=0.915)</p> <p>T2: G1= 43.4 (±10.21) vs G2= 35.3 (±11.86) (P=0.205)</p> <p>Within group changes: G1: T0-T2: P<0.05 G2: T0-T2: P<0.05</p> <p>T0: G1= 25.0 (±4.26) vs G2= 28.7 (±16.99) (P=0.264)</p> <p>T2: G1= 43.3 (±9.85) vs G2= 42.4(±11.86) (P=0.873)</p> <p>Within group changes: G1: T0-T2: P<0.05</p>
				Control group (G2);	Typical physical therapy (40-min) each day	<p>- motion</p> <p>SF-36 - Physical functioning</p> <p>- Role physical</p>	

							G2: T0-T2: P=NS
Yoshikawa et al. (2018) [57]	19 (NA)	HAL; Gait	Hospital Quasi-experimental design; T0: Pre- TKA measurement T1: Week 1 following TKA T2: Week 2 following TKA T3: Week 3 following TKA T4: Week 4 following TKA T5: Week 8 following TKA	HAL group (G1); Control group (G2);	10-12 HAL training sessions (around 15-min each) over a 4 week period + conventional physical therapy (60-80 min a day) Conventional physical therapy (60-120 min a day)	WOMAC-f	T0: G1= 82.2 (±16.9) vs G2= 74.6 (±15.0) (P=0.287) T2: G1= 82.8 (±14.5) vs G2= 69.6 (±19.0) (P=0.110) T4: G1= 86.5 (±10.6) vs G2= 83.3 (±11.3) (P=0.515) T5: G1= 92.6 (±6.6) vs G2= 85.3 (±5.7) (P=0.077)
Sarcopenia							
Norris et al. (2007) [49]	7 (7)	PAFO; ankle plantarflexion assistance	Research center Cross-sectional design	Older adults Young adults (<u>data not considered</u>)	Participants walked in three conditions: I1= with standard shoes, I2= with the PAFOs inactive, I3= with the PAFOs active Participants walked in three conditions: I1= with standard shoes, I2= with the PAFOs inactive, I3= with the PAFOs active	Preferred walking speed (m/s)	I1= 1.08 (±0.20), I2= 1.03 (±0.16) and I3= 1.05 (±0.17) I1 vs I2: P=0.098 I1 v I3: P=0.536 I2 vs I3: P=0.474
Hip fracture:							
Fujikawa et al. (2022) [34]	14 (14)	HAL; hip support	Hospital Within subject design; T0: baseline, before HAL rehabilitation T1: after HAL rehabilitation	No groups	Conventional rehabilitation + HAL rehabilitation (6x per week, for 15-min per session)	FTSS (sec)	T0 = 34.9 (±8.4) vs T1= 19.8 (±8.0) (P<0.01; ES= 1.81 (95% CI = 0.93 – 2.66))
Stroke:							

Taki et al. (2020) [54]	72 post-matched study patients (CRP group: n = 36 and HRP group: n = 36) (NA);	HAL; gait	Hospital Observational study T0= Time of rehabilitation admission T1= Time of hospital discharge	CRP (G1);	Gait training with KAFO or AFO 3 hours/day for 7 days/week	FIM: motor subscore Locomotion at hospital ward on discharge: - ambulation	T0: G1=19.64 (±11.19) vs G2=18.03 (±7.26) (P=446) T1: G1=58.81 (±25.97) vs G2=69.67 (±17.37) (P=0.045) T0-T1: G1= increase of 39.17 (±24.37) G2= increase of 51.64 (±16.72) G1 vs G2 (P=0.013) G1=20 (55.6%) vs G2=30 (83.3%) (P=0.011)
				HRP (G2);	Gait training with HAL 3 hours/day for 7 days/week		
Longatelli et al. (2021) [46]	29 (NA); 34.50 days [28–51] for the CG and 40 [30–64] days for the EG	Ekso GTA™; gait (hip and knee support)	Rehabilitation center Pre-Post design T0: Pre-intervention assessment T1: Post-intervention assessment	CG (G1);	Standard therapy sessions 4 weeks (3 60-min sessions/week)	Capacity Score (include 6 clinical scales: 5-item Barthel Index, Motricity index, 10 MWT, 6 min walk test, FAC and Trunk Control Test)	Values are Median (I-III Quartile) T0-T1: G1: T0=5.06 (3.63-9.63) vs T1=9.06 (6.97-13.83) (P<0.001) G2: T0=3.99 (3.29-5.50) vs T1=6.63 (5.76-7.61) (P<0.001) T1: G1=9.06 (6.97-13.83) vs G2=6.63 (5.76-7.61) (P=0.350)
				EG (15);	Standard therapy sessions + exoskeleton-assisted gait rehabilitation 4 weeks (12 sessions of 60 min of assisted rehabilitation 3 times/week + 8 sessions of conventional therapy)		
Watanabe et al. (2017) [56]	24 (HAL® group: n= 12, CGT group: n= 12) (NA); 57.0±44.3 days HAL group and 48.1±33.3 days in the control group	HAL; gait	Hospital RCT; T0: Pre-intervention T1: Post-intervention (4 weeks) T2: Follow-up 8 weeks T3: Follow-up 12 weeks	HAL (G1);	Gait training using the HAL 3 times a week with a total of 12 sessions over 4 weeks	FAC LE Fugl-Meyer Assessment	G1 x G2 (P=0.026) G1: HAL group T0: 2.0 (±1.0) T1: 3.0 (±1.3) T2: 3.5 (±1.5) T3: 3.6 (±1.7) G2: Conventional group T0: 2.0 (±0.9) T1: 2.5 (±1.3) T2: 2.4 (±1.5) T3: 2.7 (±1.6) G1 x G2 (P=0.131) G1: HAL group T0: 19.5 (±6.3) T1: 20.6 (±6.3) T2: 18.7 (±7.0) T3: 18.7 (±7.1)
				CGT (G2);	Conventional gait training 3 times a week with a total of 12 sessions over 4 weeks		

							G2: Conventional group T0: 21.1 (± 5.4) T1: 22.5 (± 5.7) T2: 22.7 (± 6.4) T3: 23.1 (± 6.5)
Park et al. (2021) [51]	20 (NA); 13.20 \pm 7.20 days in the CPT-G and 7.60 \pm 4.9 days in the ICT-C group	Walkbot; Gait (hip, knee, and ankle support)	Hospital RCT T0: Pre-intervention T1: Post-intervention	CPT-G (G1)	Conventional physical therapy and gait training 7 days/week, for 2 weeks. At least one 60-min session of physical therapy per day and the additional 30-min standard physical therapy session	FMA-LE synergy scale - flexor synergy test (0-6)	G1: T0: 4.50 (± 1.20) vs T1: 5.50 (± 0.53) G2: T0: 3.86 (± 1.83) vs T1: 5.29 (± 0.99) P (time effect)= 0.000 P (between groups)= 0.116 P (Time x Group)= 0.615 G1: T0: 6.50 (± 1.85) vs T1: 7.50 (± 1.07) G2: T0: 5.71 (± 2.16) vs T1: 7.07 (± 1.00) P (time effect)= 0.007 P (between groups)= 0.170 P (Time x Group)= 0.797 G1: T0: 10.00 (± 1.41) vs T1: 14.00 (± 2.56) G2: T0: 9.14 (± 2.25) vs T1: 12.79 (± 2.64)
				ICT-C (G2)	Interlimb coordinated humanoid robot session with VR/AR game, combined with conventional physical therapy 7 days/week, for 2 weeks. At least one 60-min session of physical therapy per day and the additional 30-min ICT session	- extensor synergy test (0-8) - Total synergy	
Yeung et al. (2021) [65]	47 (NA); 27 \pm 17 days	Exoskeleton ankle robot; Ankle dorsiflexion and plantar flexion	Bi-center RCT T0: Pre-intervention T1: Post-intervention	PAAR (G1) (N=14)	Conventional training routine (2h/weekday) + 30-min robot-assisted (Power-Assisted Ankle Robot) training (10-min stair training and two times 10-min overground walking)	FAC (max. 5)	T0: G1= 1.9 (± 0.7) G2= 2.2 (± 0.8) G3= 2.2 (± 1.0) T0-T1 (mean difference [95% CI]): G1= increase of 1.4 [1.0, 1.9] (P<0.001) G2= increase of 1.4 [0.9, 2.0] (P<0.001) G3= increase of 0.9 [0.4, 1.3] (P<0.01)
				SCAR (G2) (N=16)	Conventional training routine (2h/weekday) + 30-min robot-assisted (Swing-Controlled Ankle Robot) training (10-min		

					stair training and two times 10-min overground walking)		Between-group differences of score improvement (T0-T1): G1 vs G3= 0.4 [-0.2, 1.0] (P=NS, ES=0.671) G2 vs G3= 0.6 [0.0, 1.1] (P<0.05, ES=0.610) G1 vs G2= -0.2 [-0.8, 0.4] (P=NS, ES=0.010) T1: % independent walker (FAC ≥4) G1= 57.1 G2= 56.3 G3= 29.4
				CT (G3) (N=17)	Conventional training routine (2h/weekday)		
Healthy older adults							
Jayaraman et al. (2022) [36]	12 (12)	GEMS-H; hip flexion and extension	Senior living community Quasi-experimental study: Pre-Post test design T0: Pre-intervention T1: Post-intervention	No groups	Twelve gait training sessions (30min each) over a period of 4–6 weeks	FGA (scored on 30) Number of sedentary bouts (>3min) per day Time spent in the sedentary bouts (min/day) FTSS (s)	T0: 17 (±2.9) vs T1: 23 (±3.6) (P< 0.001) T0: 53.7 vs T1: 44.3 (P=0.004) T0: 610.2 vs T1: 497.3 (P=0.003) T0: 15.2 (±4.1) vs T1: 12.3 (±4.0) (P<0.001)
Fang et al. (2022) [33]	6 (6)	Dual-mode ankle exoskeleton; ankle plantar flexor assistance as a mobility aid and plantar flexor resistance as a functional muscle recruitment training platform.	Rehabilitation center Within-subject design Pilot subject: T0: Pre resistance-training T1: Post resistance-training	No groups	2 visits assessing 2 different protocols Assistance protocol: treadmill walking in two conditions: exo-adaptation (I1) (30-min of bilateral plantarflexion and dorsiflexion assistance) and shod (I2) (no exoskeleton). Resistance protocol: treadmill walking in two conditions: baseline (I3) (without exoskeleton) and resisted (I4) (bilateral plantar flexor resistance and biofeedback). Resistance training protocol:	Resistance training protocol (N=1) Self-selected walking speed (m/s) Fast walking speed (m/s)	T0: 1.07 vs T1: 1.12 T0: 1.38 vs T1: 1.59

					One pilot participant performed 12 sessions of resistance training over four weeks (T0: Pre resistance-training, T1: Post resistance-training)		
Martini et al. (2019) [47]	20 (20)	APO; Hip flexion and extension	Hospital Randomized Controlled Trial T0: baseline measurement T1: post-training program (end of week 4) T2: follow-up measurement (one-month)	APO group (G1)	four-week robot-assisted gait training program, followed by a one-month follow-up period.	Daily steps (/10 ³)	<p>T0: G1: 9.89 (±4.28) vs G2= 12.1 (±3.23) (P=0.35)</p> <p>T1: G1= 11.2 (±3.40) vs G2= 12.7 (±4.43) (P=0.39)</p> <p>T2: G1= 9.77 (±5.83) vs G2= 11.5 (±2.29) (P=0.16)</p>
				Control group (G2)	four-week home exercise program of self-paced overground walking, followed by a one-month follow-up period.		
Lee et al. (2022) [62]	60 (60)	EX1; hip flexion and extension	Randomized controlled trial T0: Pre intervention T1: Post intervention	Group A (G1)	4 weeks of exercises with 3 sessions per week (40min each). Exercise consists of overground walking without exoskeleton at a comfortable speed for 300m straight.	SPPB	<p>T0-T1 :</p> <p>G1 : increase of 0.31 (±0.63) (P=NS)</p> <p>G2 : increase of 0.33 (±0.82) (P=NS)</p> <p>G3 : increase of 0.33 (±0.62) (P=NS)</p> <p>G4 : increase of 0.87 (±1.19) (P<0.01)</p>
				Group B (G2)	4 weeks of exercises with 3 sessions per week (40min each). Exercise consists of overground walking using the resistance mode of the exoskeleton at a comfortable speed for 300m straight.		
				Group C (G3)	4 weeks of exercises with 3 sessions per week (40min each). Exercise consists of stair ascent using the assistance mode of the exoskeleton at a comfortable speed from the first basement level to the fourth floor.		

				Group D (G4)	4 weeks of exercises with 3 sessions per week (40min each). Exercise consists of incline treadmill walking using the assistance mode of the exoskeleton at a comfortable speed.		
Older person's ability to build/maintain social relations							
Osteoarthritis							
Setoguchi et al. (2022) [53]	47 (NA)	HAL;	Hospital RCT T0: Preoperatively T1: 1 week postoperatively T2: 3 weeks postoperatively	HAL group (G1); Control group (G2);	HAL gait training: 3 sessions per week (40-min each) for 6 weeks in total + typical physical therapy on days without HAL training Typical physical therapy (40-min) each day	SF-36: Social functioning	T0: G1= 36.9 (±12.14) vs G2= 36.9 (±17.37) (P=0.915) T2: G1= 52.2 (±9.59) vs G2= 51.4 (±9.39) (P=0.701) Within group changes: G1: T0-T2: P=NS G2: T0-T2: P<0.05
Ability to meet basic needs							
Stroke							
Rojek et al. (2020) [63]	44 (NA); 4–12 months for the experimental group and 5–12 months in the control group	Ekso; gait	Rehabilitation center RCT; T0: pre-intervention T1: post-intervention (4 weeks)	Experimental group (G1) (N=23); Control group (G2) (N=21);	Gait training with the Ekso GT exoskeleton, occupational therapy and individually selected physical therapy 5 times a week for 4 weeks Classic rehabilitation: Individual exercises with a therapist, verticalization and gait, group exercises improving general fitness, occupational therapy and individually selected elements of physical therapy 5 times a week for 4 weeks	Barthel Index Rivermead Mobility Index	G1: T0=25 (±25) vs T1=50 (±35) (P=0.00001) G2: T0=85 (±25) vs T1=85 (±50) (P=0.006) T0: G1=25 (±25) vs G2=85 (±25) (P=0.0003) T1: G1=50 (±35) vs G2=85 (±50) (P=0.01) G1: T0=3 (±5) vs T1=6 (±7) (P= 0.0003) G2: T0=10 (±12) vs T1=13 (±8) (P=NS) T0: G1=3 (±5) vs G2=10 (±12) (P=NS) T1: G1=6 (±7) vs G2=13 (±8) (P=NS)
Calabrò et al. (2018) [59]	40 (18 in EGT and 14 in OGT group); mean 10 ±3	Ekso; gait (hip and knee support)	Rehabilitation center RCT	EGT (G1);	Conventional physiotherapy training + 45-min session of Ekso™ training + TMS	Rivermead Mobility Index	EGT-induced improvements: ES=0.6, P=0.03

	m in the EGT and 11 ±3 m in the OGT		T0: Pre- gait training T1: Post- gait training (8 weeks)		five 60-min sessions/ week for 8 consecutive weeks		
				OGT (G2);	Conventional physiotherapy training + 45-min of conventional gait training +TMS five 60-min sessions/ week for 8 consecutive weeks		
Taki et al. (2020) [54]	72 post-matched study patients (CRP group: n = 36 and HRP group: n = 36) (NA);	HAL; gait	Hospital Observational study	CRP (G1);	Gait training with KAFO or AFO 3 hours/day for 7 days/week	Modified rankin scale	T0: G1= 4 (4-5) vs G2= 4 (4-5) (Median (IQR)) (P=0.513) T1: G1= 4 (3-4) vs G2= 4 (3-4) (Median (IQR)) (P=0.806)
				HRP (G2);	Gait training with HAL 3 hours/day for 7 days/week	FIM - Total	T0: G1=35.14 (±19.07) vs G2=35.92 (±15.8) (P=0.858) T1: G1=84.47 (±33.0) vs G2=100.17 (±21.78) (P=0.024) T0-T1: G1= increase of 49.33 (±29.51) G2= increase of 64.25 (±21.66) G1 vs G2 (P=0.018)
Parkinson's disease							
Gryfe et al. Jayaraman et al. (2022) [36]	12 (12)	GEMS-H; hip flexion and extension	Senior living community Quasi-experimental study: Pre-Post test design	No groups	Twelve gait training sessions (30min each) over a period of 4–6 weeks	10MWT (m/s) - Fasted safe gait speed 6MWT (m)	T0 vs T1: improvement of 0.21 m/s (P= 0.001) T0: 371.2 m (±94.5) vs T1 : 433.7 m (± 113.1) (P<0.001)

			T0: Pre-intervention T1: Post-intervention			BBS	T0: 48 out of 56 (± 7) vs T1: 52 out of 56 (± 6) ($P < 0.001$)
Aprigliano et al. (2019) [32]	6 (6)	APO; Hip flexion and extension	Rehabilitation center Within-subject design	No groups	1 session 14 experimental trials with the APO. These trials include perturbations (sagittal and frontal plane) and fake trials (no perturbation) with two robot-working modalities. The “zero-torque mode” allows the subject to move freely without being obstructed, while the “assistive mode” will supply torques at both hip joints when balance loss is detected to promote stability recovery.	<u>Balance recovery after perturbation while walking:</u> Margin of Stability (MoS), defined as the person’s ability to manage unexpected perturbations while walking: - Sagittal plane - Frontal plane	The findings indicate that the assistive approach effectively enhances balance recovery in the sagittal plane for both perturbation paradigms. However, it does not demonstrate effectiveness in maintaining stability in the frontal plane
Fang et al. (2022) [33]	6 (6)	Dual-mode ankle exoskeleton; ankle plantar flexor assistance as a mobility aid and plantar flexor resistance as a functional muscle recruitment training platform.	Rehabilitation center Within-subject design Pilot subject: T0: Pre resistance-training T1: Post resistance-training	No groups	2 visits assessing 2 different protocols Assistance protocol: treadmill waking in two conditions: exo-adaptation (I1) (30-min of bilateral plantarflexion and dorsiflexion assistance) and shod (I2) (no exoskeleton). Resistance protocol: treadmill waking in two conditions: baseline (I3) (without exoskeleton) and resisted (I4) (bilateral plantar flexor resistance and biofeedback). Resistance training protocol:	<i>Resistance training protocol (N=1)</i> 6MWT distance (m) Plantar flexor strength Fast walking speed (m/s)	T0: 397 to T1: 539 (35% increase) T0 vs T1: increase of 18% (right side) and 43% (left side) T0: 1.38 vs T1: 1.59

					One pilot participant performed 12 sessions of resistance training over four weeks (T0: Pre resistance-training, T1: Post resistance-training)
