## Figure

**Figure S1.** Correlation between pre- and post-CRT miR-21 expression in plasma and tumor tissue.

## Table

**Table S1.** Predictive value of miR-21 cut-off.

miR-21 Cut-Off	Pre-CRT Tumor Tissue <b>2.61</b>	Pre-CRT Non- Neoplastic Tissue <b>1.2</b>	Pre-CRT Serum <b>0.54</b>	Post-CRT Serum <b>0.84</b>
Sensitivity (%)	53	56	44	50
Specificity (%)	47	57	47	53
PPV (%)	53	60	50	56
NPV (%)	47	53	41	47

Cut-off derived by ROC curve. miR-21 estimated cut-points: 2.61 in pre-CRT tumour tissue; 1.2 in pre-CRT non-neoplastic tissue; 0.54 in pre-CRT serum; 0.84 in post-CRT serum. PPV: positive predictive value; NPV: negative predictive value.
