

Supplementary Material

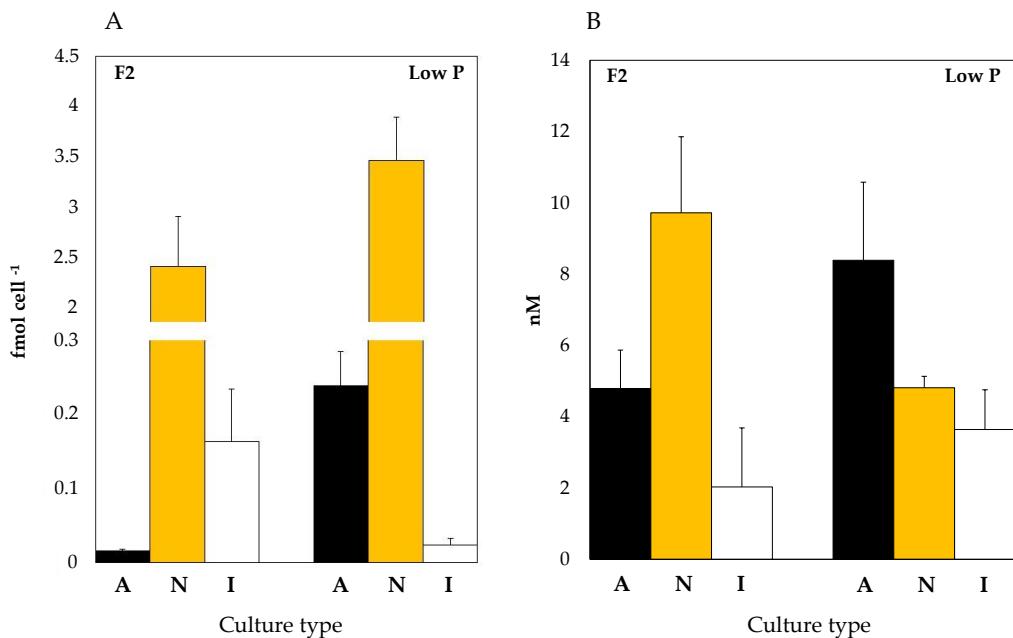

Figure S1. Total pPUA (A) and total dPUA (B) concentrations at the *C. cryptica* cultures in late exponential growth phase at the two phosphate availability conditions assayed (F2 and low P). pPUA scale is normalized by cell density. Error bars are the standard deviation ($n=5$). Sample key: A-cultures = Axenic cultures of *C. cryptica*; N-cultures = *C. cryptica* co-cultured with autoctonous heterotrophic bacteria; I-cultures = *C. cryptica* co-cultured with introduced heterotrophic bacteria.

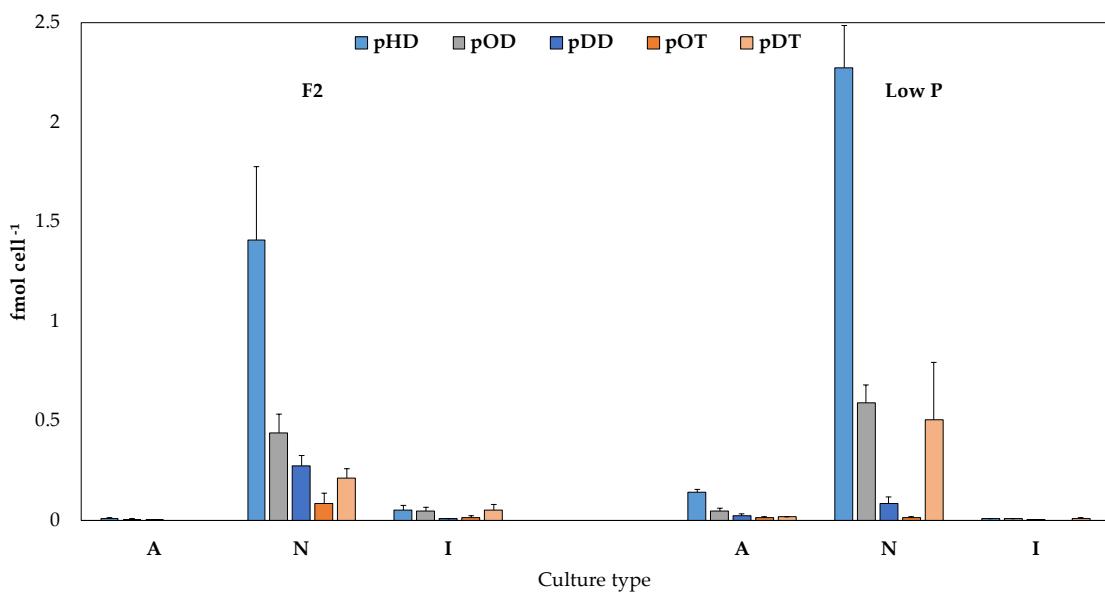

Figure S2. Average pPUA types concentration detected in *C. cryptica* cultures quantified at late exponential growth phase at the two phosphate availability conditions assayed (F2 and low P). Sample key: A-cultures = Axenic cultures of *C. cryptica*; N-cultures = *C. cryptica* co-cultured with autoctonous heterotrophic bacteria; I-cultures = *C. cryptica* co-cultured with introduced heterotrophic bacteria. pHd = particulate 2E,4E/Z-heptadienal; pOD = particulate 2E,4E/Z-octadienal; pDD = particulate 2E,4E/Z-decadienal; pOT = particulate 2E,4E/Z,7-octatrienal; pDT = particulate 2E,4E/Z,7Z-decatrienal. pPUA data are normalized by cell density ($n=5$).

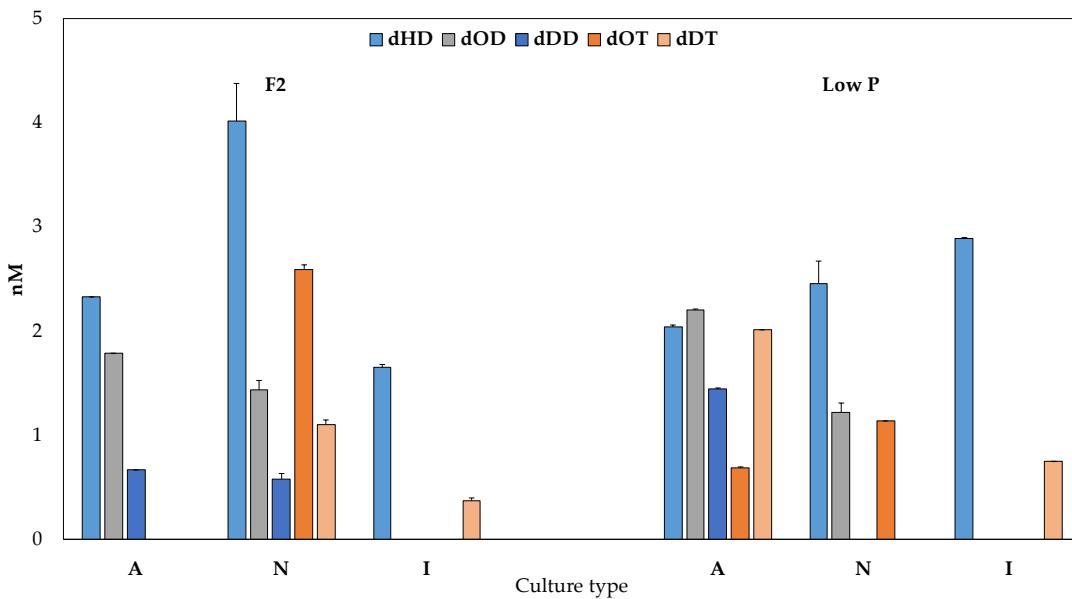

Figure S3. Average dPUA types concentration detected in *C. cryptica* cultures cultures quantified in late exponential growth phase at the two phosphate availability conditions assayed (F2 and low P) (n=5). Sample key: A-cultures = Axenic cultures of *C. cryptica*; N-cultures = *C. cryptica* co-cultured with autoctonous heterotrophic bacteria; I-cultures = *C. cryptica* co-cultured with introduced heterotrophic bacteria.; dHD = dissolved 2E,4E/Z-heptadienal; dOD = dissolved 2E,4E/Z-octadienal; dDD = dissolved 2E,4E/Z-decadienal; dOT = dissolved 2E,4E/Z,7-octatrienal; dDT = dissolved 2E,4E/Z,7Z-decatrienal (n=5).

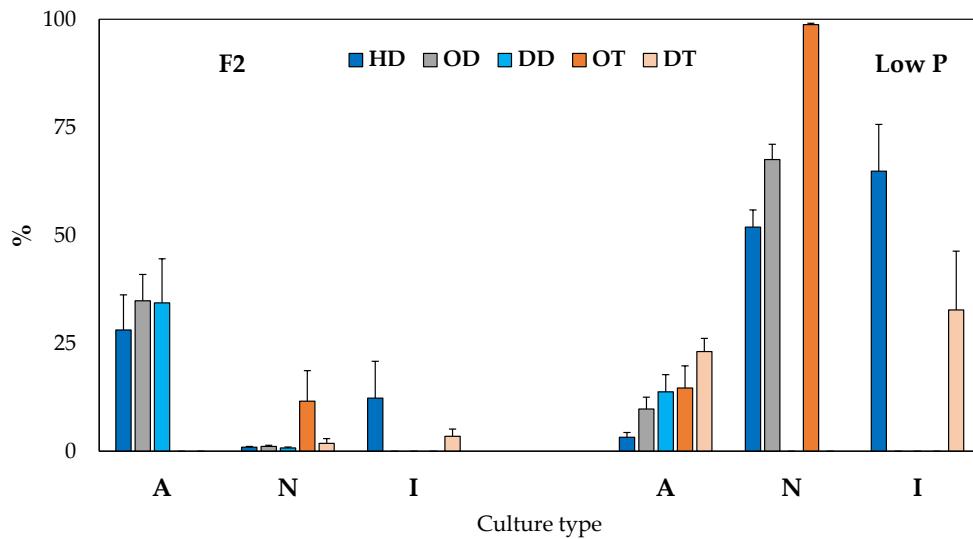

Figure S4. Dissolved PUA types percentage in the different *C. cryptica* cultures quantified in late exponential growth phase at the two phosphate availability conditions assayed (F2 and low P). The percentage was obtained adding the concentrations of total pPUA types and total dPUA types (nM). Sample key: A-cultures = Axenic cultures of *C. cryptica*; N-cultures = *C. cryptica* co-cultured with autoctonous heterotrophic bacteria; I-cultures = *C. cryptica* co-cultured with introduced heterotrophic bacteria. HD = 2E,4E/Z-heptadienal; OD = 2E,4E/Z-octadienal; DD = 2E,4E/Z-decadienal; OT = 2E,4E/Z,7-octatrienal; DT = 2E,4E/Z,7Z-decatrienal (n=5).

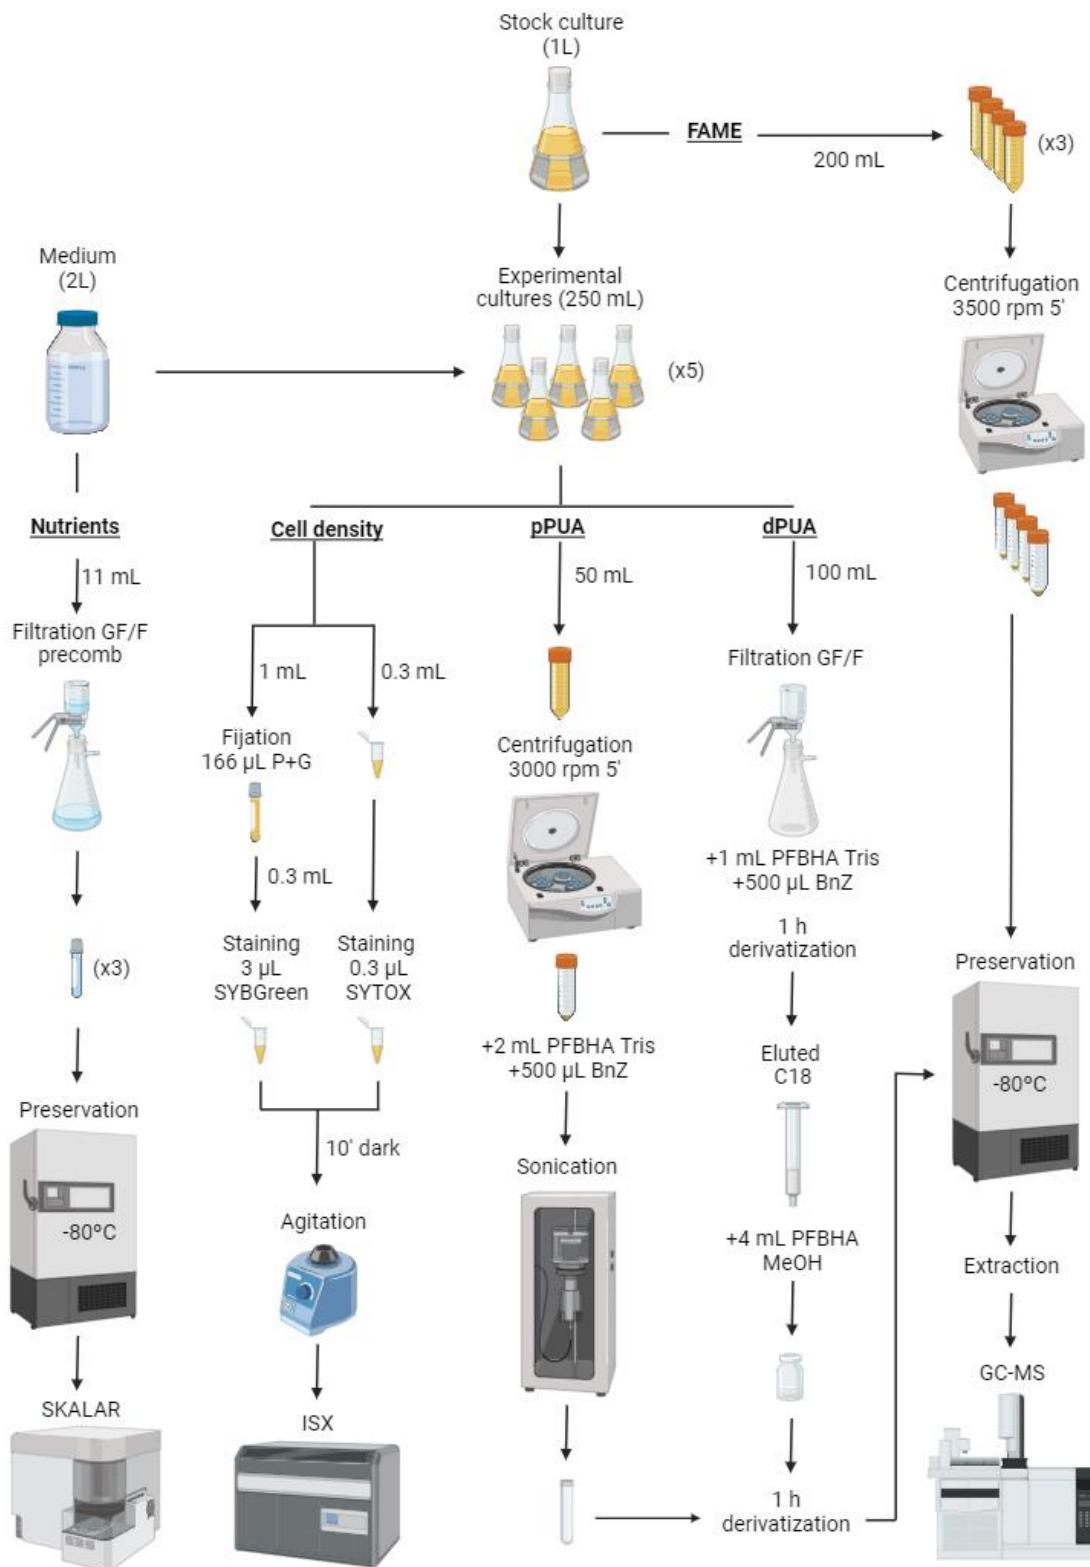

Figure S5. Flow diagram of the experimental procedures carried out in this study. The steps carried out in the experimental sampling and the subsequent procedures to obtain the variables of interest (nutrient, cell density, pPUA, dPUA and FAME concentrations) are shown. Sample key: P+G= paraformaldehyde and glutaraldehyde; PFBHA= reagent O-(2,3,4,5,6-pentafluorobenzylhydroxylamine)hydrochloride; Tris= Tris-HCl; BnZ= benzaldehyde, internal standard; C18= LiChrolut® RP C-18 cartridge; MeOH= methanol; SKALAR= Skalar autoanalyzer; ISX= Luminex ImageStream® X Mk II; GC-MS= gas chromatography-mass spectrometer.

Table S1: Results of one-way ANOVA tests between growth rates of *C. cryptica* and heterotrophic bacteria present in the cultures at the two phosphate availability conditions assayed (F2 and low P) (n=5). Sample key: A-cultures = Axenic cultures of *C. cryptica*; N-cultures = *C. cryptica* co-cultured with autoctonous heterotrophic bacteria; I-cultures = *C. cryptica* co-cultured with introduced heterotrophic bacteria.

Growth rates (day ⁻¹)
