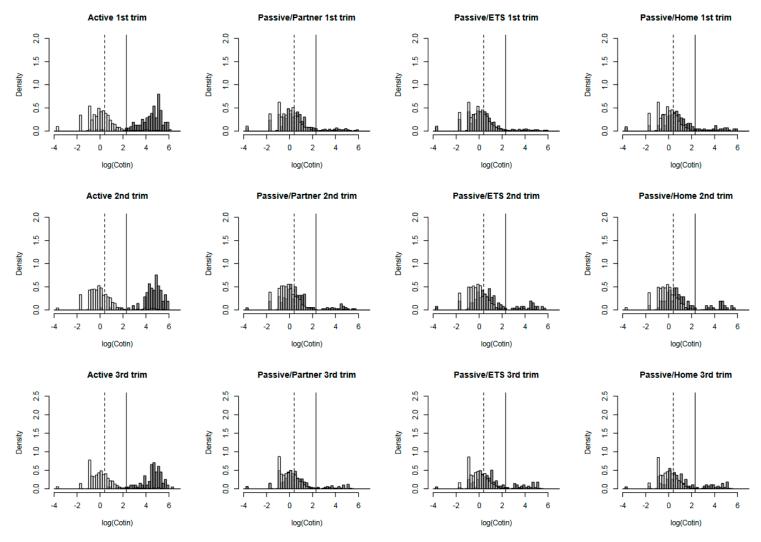

Figure S1. Histograms of log (cotinine) in each trimester of pregnancy and self-reported active and passive smoking status. Non-exposed—light gray; Exposed—dark gray; Overlapping parts of histograms—moderate gray; Vertical lines indicate cut-off points for cotinine levels: the continuous vertical line corresponds to 10 ng/mL as the cut-off point for active smoking, the dotted vertical line corresponds to 1.5 ng/mL as the cut-off point for passive smoking. ETS: environmental tobacco smoke.
