Figure S1. RMSD values of different three systems APO-TP, Cu(II)-TP and Inhibitor-TP.

Figure S2. Ca RMSF per residue of different three systems APO-TP, Cu(II)-TP and Inhibitor-TP.

Figure S3. Hydrogen bond existence map between residues of $\beta 1$ and $\beta 2$. Red band shows existence of hydrogen bond while white band shows absence of hydrogen bond. Donor/acceptor pairs are shown for (a) APO-TP (b) Cu(II)-TP and (c) Inhibitor-TP systems. Only hydrogen-bond pairs that have an incidence greater than 20% in the WT system are shown.

Figure S4. Hydrogen bond existence map between residues of $\beta 2$ and $\beta 3$. Red band shows existence of hydrogen bond while white band shows absence of hydrogen bond. Donor/acceptor pairs are shown for (a) APO-TP (b) Cu(II)-TP and (c) Inhibitor-TP systems. Only hydrogen-bond pairs that have an incidence greater than 20% in the WT system are shown.

Figure S5. Hydrogen bond existence map between residues of $\beta 3$ and $\beta 4$. Red band shows existence of hydrogen bond while white band shows absence of hydrogen bond. Donor/acceptor pairs are shown for (a) APO-TP (b) Cu(II)-TP and (c) Inhibitor-TP systems. Only hydrogen-bond pairs that have an incidence greater than 20% in the WT system are shown.

Figure S6. Hydrogen bond existence map between residues of $\beta 5$ and $\beta 6$. Red band shows existence of hydrogen bond while white band shows absence of hydrogen band. Donor/acceptor pairs are shown for (a) APO-TP (b) Cu(II)-TP and (c) Inhibitor-TP systems. Only hydrogen-bond pairs that have an incidence greater than 20% in the WT system are shown.
