

Supplementary Material S1:

Additional information on the Local Administrative Unit and delimitation of each metropolitan area.

To apply the PHI to the metropolitan areas it was deemed important to identify the adequate administrative level to provide evidence on urban inequalities. For this study the definition of a municipality from the Encyclopædia Britannica was applied (<http://www.britannica.com/topic/municipality>): «A municipality is a political subdivision of a state within which a municipal corporation has been established to provide general local government for a specific population concentration in a defined area (...). The municipality is one of several basic types of local government, the others being counties, townships, school districts, and special districts». However, European countries have a diversified system of local government in which several different categories exist. For instance, the term municipality may be applied in France to the *commune*, in Italy to *comune* and in Portugal to *município*.

EUROSTAT has set up a hierarchical system of Nomenclature of Territorial Units for Statistics (NUTS) and Local Administrative Units (LAUs). NUTS are organized into four levels. NUTS 0 correspond to the 28 EU countries. NUTS 1 are the major socio-economic regions within a given country. NUTS 2 are basic regions for the application of regional policies and NUTS 3 are small regions for specific diagnoses. Below, the Local Administrative Units are also organized into two hierarchical levels: The upper LAU level (LAU level 1) and the lower LAU level (LAU level 2). For most European countries, LAU-2 corresponds to municipalities, except for Bulgaria and Hungary (Settlements), Ireland (Districts), Lithuania (Elderships), Malta (Councils), Denmark (Municipalities), Greece (Municipalities), Portugal (Parishes), and the United Kingdom (Wards) [47] (Table S1). More information at: <http://ec.europa.eu/eurostat/web/nuts/local-administrative-units>.

Table S1. Name of the administrative unit, at the Local Administrative Unit (LAU) level.

Country	LAU 1	LAU 2
Belgium	Arrondissements; Verviers split into two (same as NUTS 3)	Municipalities (<i>Gemeenten/Communes</i>)
Czechia	Districts (<i>Okresy</i>)	Municipalities (<i>Obce</i>)
Germany	Collective municipalities (<i>Verwaltungsgemeinschaften</i>)	Municipalities (<i>Gemeinden</i>)
Spain	Provinces + Islands + Ceuta and Melilla (same as NUTS 3)	Municipalities (<i>Municipios</i>)
Greece	Municipalities/Communities (<i>Dimoi/Koinotites</i>)	Municipal districts/Community districts (<i>Demotiko diamerisma/Koinotiko diamerisma</i>)
Italy	Provinces (same as NUTS 3)	Municipalities (<i>Comuni</i>)
Portugal	Municipalities (<i>Concelhos—Municípios</i>)	Parishes (<i>Freguesias</i>)
Sweden	Counties (same as NUTS 3)	Municipalities (<i>Kommuner</i>)
United Kingdom	In England and Wales: Districts or individual unitary authorities In Scotland: Individual unitary authorities or LECs In Northern Ireland: Districts	Wards (or parts thereof)

Metropolitan areas specified different administrative levels for this project, according to the Local Administrative Unit (LAU) Level defined by EUROSTAT (Table S2). One metropolitan area presents a mixture of administrative levels: Berlin-Brandenburg. This metropolitan area consists of

two regions: Berlin and Brandenburg. The first enjoys a high level of power and, therefore, it has the capacity to produce local statistics to support the analysis of intra-urban disparities. Accordingly, the specified administrative level is the borough. For Brandenburg, the administrative level is the municipality.

Table S2. Local Administrative Unit (LAU) level and number of units, by metropolitan area.

Metropolitan Area	LAU Level	Number of Units
Athens	1	40
Barcelona	2	23
Berlin-Brandenburg	1 and 2	30
Brussels	2	121
London	1	33
Lisbon	1	18
Prague	1/2 (equal)	57
Stockholm	2	26
Turin	2	49

The EUROSTAT delimitation of the metropolitan regions was taken into account to identify the geographical extent of the selected metropolitan areas. EUROSTAT defines metropolitan regions as «NUTS 3 regions, or a combination of NUTS 3 regions, which represent all agglomerations of at least 250,000 inhabitants. These agglomerations were identified using the Urban Audit's Functional Urban Area (FUA). Each agglomeration is represented by at least one NUTS 3 region. If in an adjacent NUTS 3 region more than 50% of the population also lives within this agglomeration, it is included in the metro. As the metro-regions are based on agglomerations, which include the commuter belt around a city, this approach corrects the distortions created by commuting and the GDP per inhabitant becomes meaningful, whereas comparison of GDP per inhabitant of NUTS 3 regions is far more difficult to interpret, since the difference may be partly artificial» (Source: <http://ec.europa.eu/eurostat/web/metropolitan-regions/overview>).

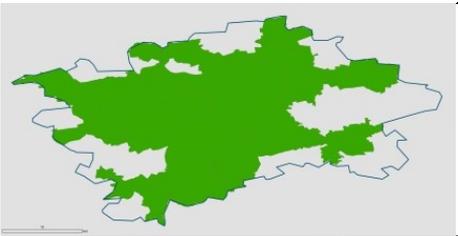

The EUROSTAT delimitation was not considered adequate by all the focal points responsible for the metropolitan areas. Three metropolitan areas applied the EUROSTAT delimitation; three have taken into account national documents and the others defined their own delimitation based on functional aspects (Table S3). Moreover, two metropolitan areas used numerical cut-offs regarding population to define the municipalities being analysed: Barcelona and Prague. Table S4 presents the justification for the selection of the delimitation, as well as a map with the EUROSTAT delimitation and the one taken into consideration for this study.

Table S3. Comparison of the delimitation of the metropolitan areas with the EUROSTAT definition and data source of the new delimitation.

Metropolitan area	Comparison with the EUROSTAT Delimitation of the Metropolitan Region			Source for the Delimitation of the Metropolitan Area		
	Smaller	Equal	Larger	National Document	EUROSTAT	Functional Definition
Athens						
Barcelona						
Berlin-Brandenburg						
Brussels						
Lisbon						
London						
Prague						
Stockholm						
Turin						

Table S4. Delimitation of the metropolitan areas: Decision, justification and difference between the EUROSTAT delimitation and the one taken into consideration for this project.

metropolitan area	Decision & Justification for the delimitation	Delimitation of the metropolitan area
Athens	<p>EUROSTAT definition, less the remote non-urban areas</p> <ul style="list-style-type: none"> • EUROSTAT comprises remote non-urban areas which are included for traditional reasons • The island area has a very small population (about 70,000) spread around the various islands, very different social and economic characteristics compared to Athens. 	<p>Legend:</p> <ul style="list-style-type: none">  Administrative limit according to EUROSTAT (NUTS 3, 2013 version)  Geographical Data delivered by the focal point (municipalities)  NUTS 3 (2013 NUTS version) 
Barcelona	<p>Municipalities of the Àrea Metropolitana de Barcelona with more than 10,000 inhabitants</p> <ul style="list-style-type: none"> • The EUROSTAT delimitation corresponds to Barcelona Province • There is an official delimitation from a public institution - Àrea Metropolitana de Barcelona - Law 31/2010 passed by the Parliament of Catalonia • 13 municipalities (the farthest from Barcelona proper) have less than 10,000 inhabitants and may have issues with data availability 	
Berlin-Brandenburg	<p>EUROSTAT definition plus two nearby NUTS 3</p> <ul style="list-style-type: none"> • A standard definition does not exist • The definition by EUROSTAT just includes Berlin and the adjoined municipalities • The NUTS 3 areas DE401 “Brandenburg an der Havel” and DE403 “Frankfurt (Oder)” are two cities which have a strong relationship to the city of Berlin. e.g., “Frankfurt (Oder)” has a large university and the students usually live in Berlin and study in “Frankfurt (Oder)” 	
Brussels	<p>Keeps EUROSTAT delimitation from the 2013 version</p>	
London	<p>Only the NUTS 3 from Inner and Outer London</p> <ul style="list-style-type: none"> • The EUROSTAT definition seems to include areas other than London NUTS for defining the metropolitan area • The Office for National Statistics describes the London area very clearly 	
Lisbon	<p>Keeps EUROSTAT delimitation</p> <ul style="list-style-type: none"> • It is a public collective person of associative nature, and of territorial scope that aims to realize common public interests of the municipalities that comprise it (Law 10/2003, dated 13 May) • Constituted by a public structure 	

Delimitation of the metropolitan area		
metropolitan area	Decision & Justification for the delimitation	Legend:
Prague	<p>Municipalities with more than 5,000 inhabitants included in the NUTS 3 region CZ010 Prague</p> <ul style="list-style-type: none"> • Prague administrative region is over-bounded (administrative city is larger than the geographical city) 	<p> Administrative limit according to EUROSTAT (NUTS 3, 2013 version) Geographical Data delivered by the focal point (municipalities) NUTS 3 (2013 NUTS version) </p> 
Stockholm	<p>Keeps EUROSTAT delimitation</p> <ul style="list-style-type: none"> • It is an official delimitation (by law) 	
Turin	<p>Combination of two different official delimitations</p> <ul style="list-style-type: none"> • “Città Metropolitana di Torino”—Area Metropolitan of Turin, without the municipalities located in mountainous areas • Strategic Plan of Turin—all adjacent municipalities of Turin even if located in mountainous areas 	

Supplementary Material S2:

Data availability, data source and year of the indicators included on the construction of the Population Health Index by metropolitan area.

Table B1. Population Health Indicators. Data source, year and geographical level, in each Metropolitan Area.

Indicators / Metropolitan Area	Athens (EL)	Barcelona (ES)	Berlin-Bran- denburg (DE)	Brussels (BE)	Lisbon (PT)	London (UK)	Prague (CZ)	Stockholm (SE)	Turin (IT)
