Figure S1: Participant selection.

Figure S2: Trace plot for the predicted prevalence of minimum acceptable diet among Bangladeshi children in 2030.

Table S1: Complementary food groups.

Food group	Contains
Cereal and grains	Grains (bread, rice, noodles, porridge or other foods made from grains), white or pale starchy roots, tubers, and plantains
Dairy products	Cheese, infant formula, milk (powdered or fresh animal milk), yogurt
Flesh foods	Fish (fresh, dried fish or shellfish), meat (including beef, lamb, goat, chicken or duck), organ meats (including liver, kidney, heart or other organs)
Fruits and vegetables- Rich in Vitamin A	Dark green leafy vegetables; pumpkin, carrots, squash, or sweet potatoes that are yellow or orange inside; ripe mangoes; papayas; and vitamin A-rich fruits
Other fruits and vegetables	
Legumes and nuts	Any foods made from beans, nuts, lentils, peas, seeds
Breastmilk	
Eggs	

Table S2: Prevalence of minimum diet diversity, minimum diet frequency, and minimum acceptable diet among Bangladeshi children aged 6-23 months by household socioeconomic status.

| | Prevalence (95% confidence intervals) | | | | | |
| | Minimum diet diversity | | Minimum meal frequency | | Minimum acceptable diet | |

Household level		0.12 (0.70)	0.29 (0.76)	0.37 (0.79)
Likelihood Ratio test[f]				
Chi-square statistic		4.04	3.99	3.03
P value		0.1325	0.1359	0.2199

Note: SE, standard error.

[a]Mixed-effects model included random intercept and fixed slope.

[b]Model 1, unadjusted model.

[c]Model 2 included only children's characteristics and their mother's characteristics.

[d]Model 3 further included household-level characteristics.

[e]Model 4 additionally included community-level variables (contextual factors)

[f]The likelihood ratio tests were performed to compare fixed effect model with a random-effects model. Based on the results on likelihood ratio tests, estimates of fixed effect logistic regression models were preferred than mixed-effects models. The results of fixed effect logistic regression models are presented in Table 3.
