

Supplementary Materials

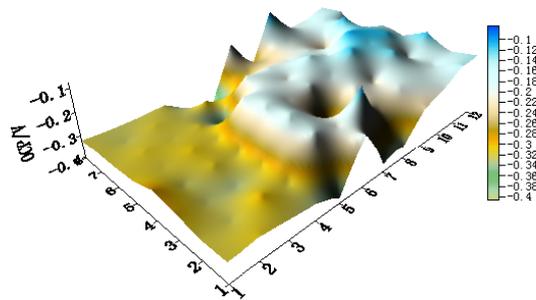

Figure S1. Open circuit potential OCP (vs. saturated calomel electrode (SCE)/V) distribution maps of the CMEA1 (HA177-2/316L SS/TA2) after immersion in artificial seawater with 2.7% chloride ions (*wt.*%).

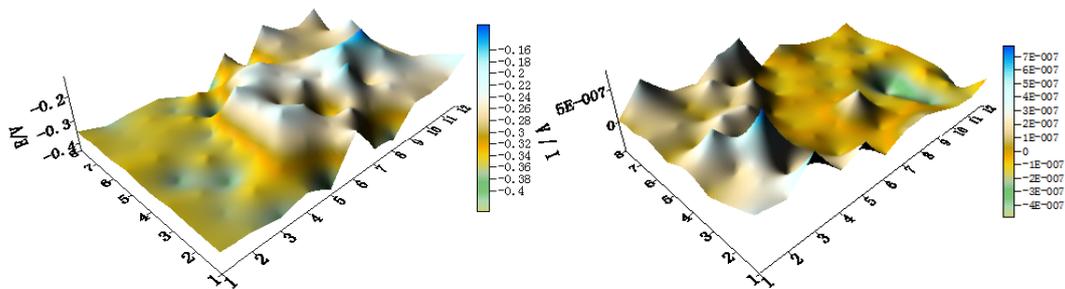

Figure S2. Spatial potential (left, V/SCE) and corresponding current (right, I/A) distribution maps of CMEA1 after being short-circuited for 12 h in artificial seawater with 2.7% chloride ions (*wt.*%).

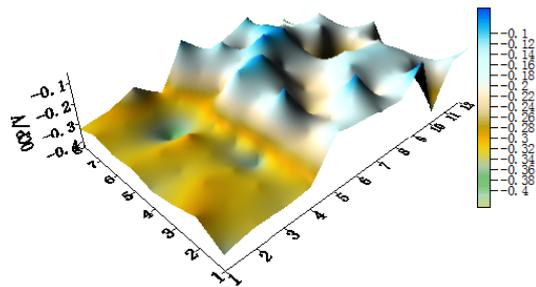

Figure S3. OCP (vs. SCE/V) distribution maps of CMEA2 after immersion in artificial seawater with 2.7% chloride ions (*wt.*%).

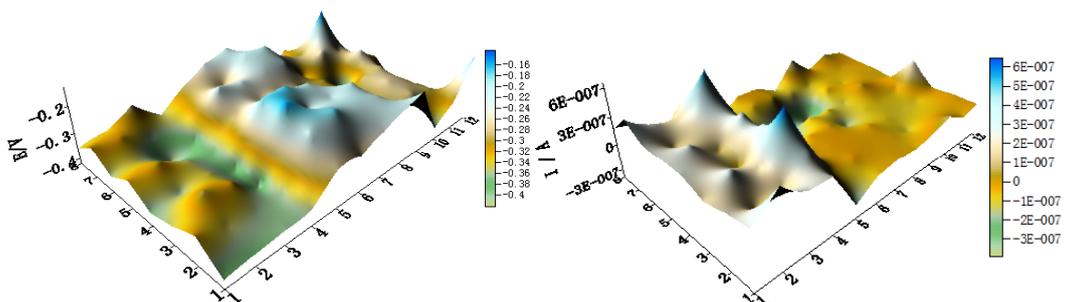

Figure S4. Spatial potential (left, V/SCE) and corresponding current (right, I/A) distribution maps of CMEA2 after being short-circuited for 12 h in artificial seawater with 2.7% chloride ions.

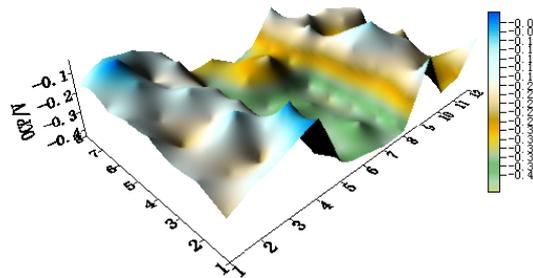

Figure S5. Potential distribution maps of CMEA3 at OCP (V/SCE) after immersion in artificial seawater with 2.7% chloride ions (wt.%).

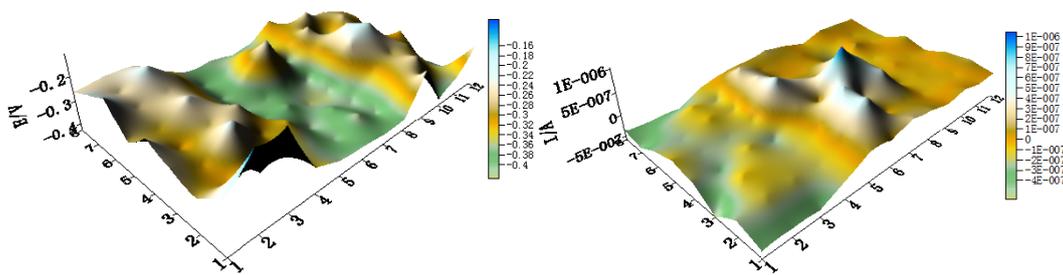

Figure S6. Spatial potential (left, V/SCE) and corresponding current (right, I/A) distribution maps of CMEA3 after being short-circuited for 12 h in artificial seawater with 2.7% chloride ions (wt.%).
