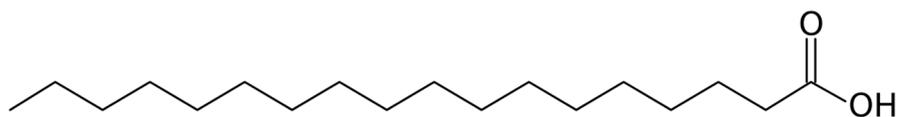

Figure S1. Formula of stearic acid.

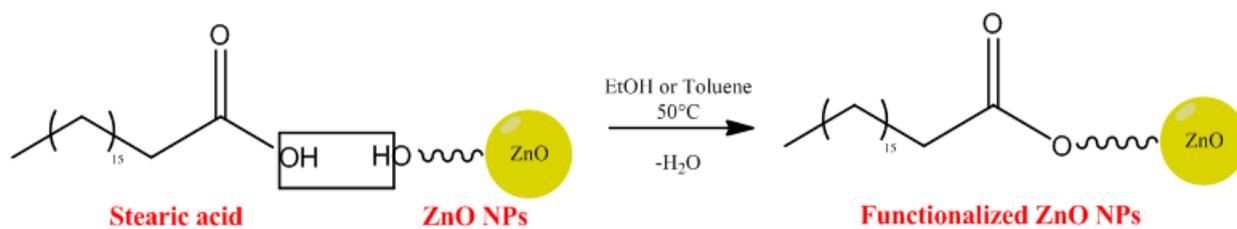

Figure S2. Chemical reaction for the functionalization of ZnONPs with stearic acid.

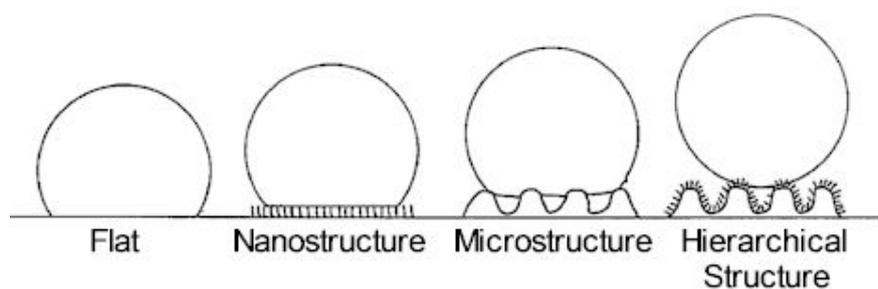

Figure S3. Effect of the surface structuring on the hydrophobicity, which increases from left to right.

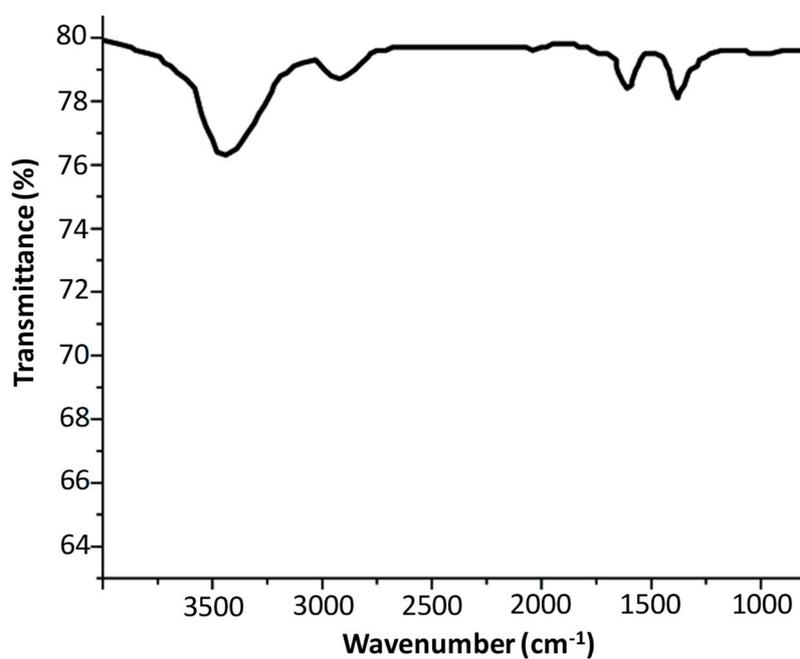

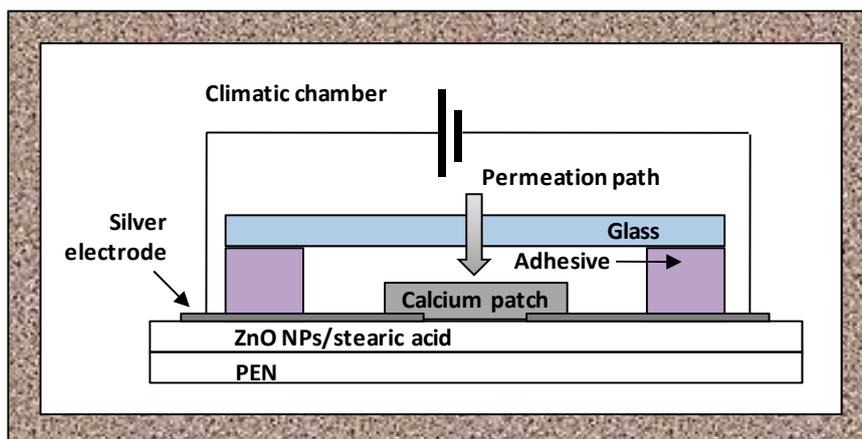

Figure S4. ATR spectrum of pure ZnO nanopowder.

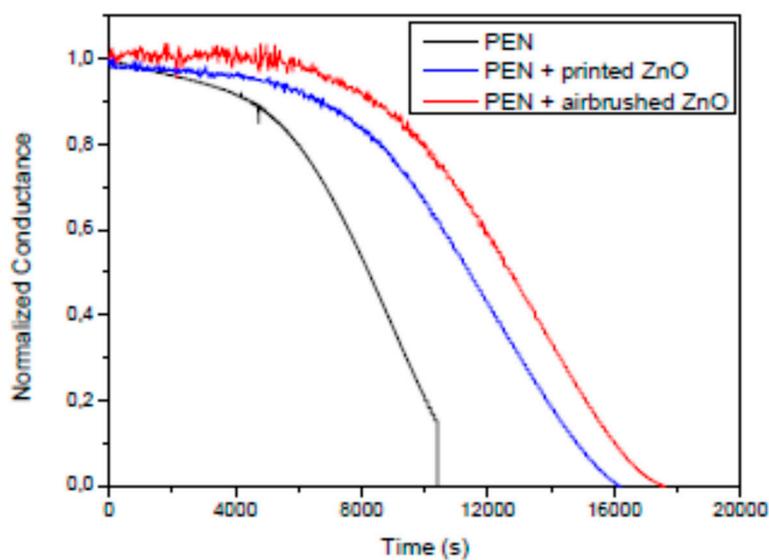

**Table S1.** Parameters used for the deposition of the ZnONPs/stearic acid coatings.

Process	1st step	Thermal treatment	2nd step	Thermal treatment
GP2	ZnONPs (13% w/w in EtOH)		Stearic acid (30 mg/mL in EtOH)	
	<b>Gravure Printing parameters:</b> printer IGT G1-5; engraved cylinder line density = 70lines/cm; stylus angle = 120°; screen angle = 53°; printing force = 700 N; printing speed = 60 m/min	140 °C, in oven, in air, for 1 h	<b>Gravure Printing parameters:</b> printer IGT G1-5; engraved cylinder line density = 70 lines/cm; stylus angle = 120°; screen angle = 53°; printing force = 100 N; printing speed = 12 m/min	60 °C, in oven, in air, for 12 h
AB2	ZnONPs (5 mg/mL in EtOH)		Stearic acid (20 mg/mL in EtOH)	
	<b>Airbrushing Painting parameters:</b> Iwata mod. Neo Nozzle size = 0,35 mm Pressure = 3 bar Working distance = 20 cm.	140 °C, in oven, in air, for 1 h	<b>Airbrushing Painting parameters:</b> Iwata mod. Neo Nozzle size = 0,35 mm Pressure = 3 bar Working distance = 20 cm.	60 °C, in oven, in air, for 12 h
GP1	ZnO + stearic acid in EtOH (10 mg/mL)			
	<b>Gravure Printing parameters:</b> printer IGT G1-5; engraved cylinder line density = 70 lines/cm; stylus angle = 120°; screen angle = 53°; printing force = 500 N; printing speed = 60 m/min	60 °C, in oven, in air, for 1 h	-	-
AB1	ZnO+ stearic acid in EtOH (2.5 mg/mL)			
	<b>Airbrushing Painting parameters:</b> Iwata mod. Neo Nozzle size = 0,35 mm Pressure = 3 bar Working distance = 20 cm	60 °C, in oven, in air, for 1 h	-	-

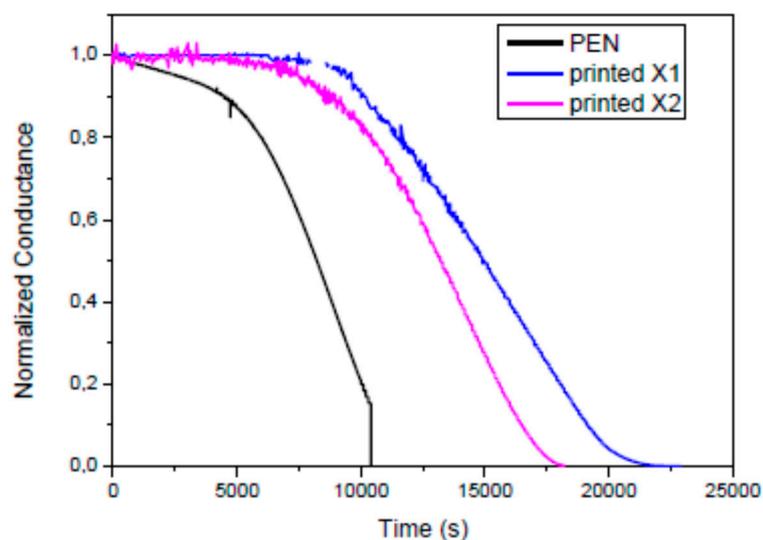

GP1: gravure printing one-step process; AB1: airbrushing one-step process; GP2: gravure printing two-step process; AB2: airbrushing two-step process.

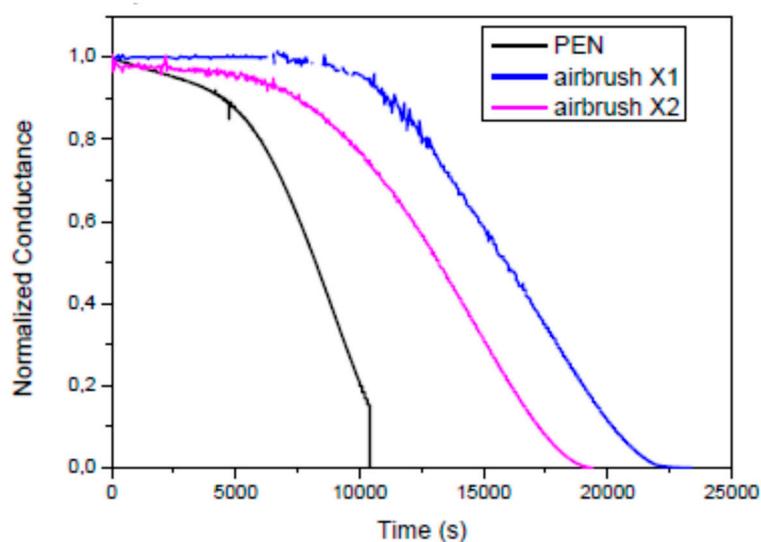

**Figure S5.** Scheme of the experimental setup for the electrical calcium test. The thick external rectangle represent the climatic chamber.

**Figure S6.** Normalized conductance *vs* time for the electrical calcium test carried out on bare PEN (black trace), and on ZnONPs coatings on PEN obtained by gravure printing (blue trace) and by airbrushing (red trace).

**Figure S7.** Normalized conductance *vs* time for the electrical calcium test carried out on bare PEN (black trace), and on ZnONPs/stearic acid coatings on PEN obtained by the gravure printing one step (GP1, blue trace) and two steps (GP2, magenta trace) approach.

**Figure S8.** Normalized conductance *vs* time for the electrical calcium test carried out on bare PEN (black trace), and on ZnONPs/stearic acid coatings on PEN obtained by the airbrushing one step (AB1, blue trace) and two steps (AB2, magenta trace) approach.

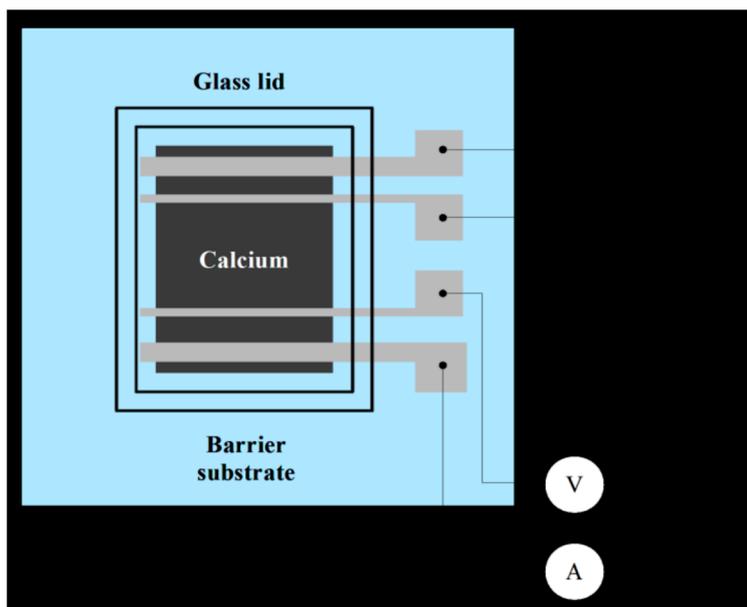

Figure S9. 4-Wires sensing geometry for electrical calcium test measurements.
