Supplementary Materials

Figure S1. FTIR spectra of PCA, FA and GOP-PCA-FA nanocomposite.

Assignment	PCA	FA	GOP-PCA	GOP-PCA-FA
N-H	-	3542, 3460	-	3540, 3400
O-H stretching	3253	3319, 3414	3223	3318
C-H aromatic stretching and PEG stretching	3072	3091, 2927	2919, 2861	3110, 2922, 2869
C=O	1662	-	1620	1692
C=O amide	-	1688	-	1605
C=N	-	1636	-	1634
Aromatic C-C stretching	1500-1300	-	1500-1300	1500-1300
C-O-C ether	-	-	1071	1068
C-H in plane bending of aromatic ring	1040	-	1000	9043
C-H bending N-H Rocking	760	762	703	761

Table S1. FTIR bands of functional groups of free drugs PCA, FA, GOP-PCA and GOP-PCA-FA nanocomposite.

Figure S2. High-resolution transmission electron micrographs of (a) GO, (b) GOP, (c) GOP–PCACA and (d) GOP–PCACA–FA nanocomposite.

Figure S3. Cell viability assay for normal human hepatocellular carcinoma (HepG2) cell line on protocatechuic acid and different functionalized graphene oxide nanocomposites, respectively, after 72 h of treatment.

Results were calculated as mean \pm standard deviation for n = 3 independent experiments. * p < 0.05 compared to PCA and CA (pure compound) treatment groups.

Table S2. IC₅₀ value (μ g/mL) of nanocarriers, pure compound and nanocomposites in different cell lines at 72 h of treatment.

CELLUNES	COMPOUND					
CELL LINE5	GO GO	P PCA	GOP-PCA	GOP-PCAFA		
Hep G2	ND N	38.08 ± 2.22	$*29.84 \pm 2.78$	$*18.89 \pm 1.64$		

The values are expressed as mean of three independent experiments. *(PCA) [#] (CA) P values < 0.05 were considered significant using one-way ANOVA followed by Dunnet's Post hoc test. (**ND: Not Determined**). IC₅₀ derived from cell proliferation assay (MTT) showing the nanocomposite with higher anticancer potential on HepG2 and HT29 cells. Results represent the mean of three independent experiments.

Abbreviations: PCA, protocatechuic acid; CA, chlorogenic acid; GOP–PCACA–graphene oxide coated PEG and loaded with protocatechuic acid+ chlorogenic acid; GOP– PCACA–FA, graphene oxide-coated PEG and loaded with protocatechuic acid+ chlorogenic acid tagged with folic acid; GOP–PCA, graphene oxide-coated PEG and loaded with protocatechuic acid; GOP–PCA–FA, graphene oxide-coated PEG and loaded with protocatechuic acid tagged with folic acid.
