Table S6. The variables adopted in the study and the corresponding methods.

Parameters	Method
Change in forest fragmentation in 2010–2014	Interpretation of remote sensing data and calculation of landscape indices
Change in shrubland fragmentation in 2010–2014	Interpretation of remote sensing data and calculation of landscape indices
Change in farmland fragmentation in 2010–2014	Interpretation of remote sensing data and calculation of landscape indices
Change in landscape fragmentation in 2010–2014	Interpretation of remote sensing data and calculation of landscape indices
Mean elevation	Remote sensing data
Household density	Interview and survey data and remote sensing data
RFFP implementation	Interview and survey data

Off-farm proportion	Interview and survey data
Nearness to township	Interview and survey data and remote sensing data
Solar water heater proportion	Interview and survey data
Walnut area	Interview and survey data
Cropland retirement proportion	Interview and survey data
Planted trees proportion	Interview and survey data
Mean patch area (MPS)	Interpretation of remote sensing data and calculation of landscape indices
Number of patches (NP)	Interpretation of remote sensing data and calculation of landscape indices
Fractal dimension index (FRAC)	Interpretation of remote sensing data and calculation of landscape indices
Connectance (CONNECT)	Interpretation of remote sensing data and calculation of landscape indices
Fragmentation index (class- or landscape-level) (FN/LFI)	Interpretation of remote sensing data and calculation of landscape indices
Shannon's diversity index (SHDI)	Interpretation of remote sensing data and calculation of landscape indices
