Table S1: ANOVA results for comparison between throughfall reduction and control treatment. Values for F (between degrees of freedom; within degrees of freedom; F-value and resulting p-value are given for each trait and season following the throughfall installation. Traits are: Ψ_{PD} : pre-dawn water-potential; Ψ_{MD} : midday water-potential; Ψ_{TLP} : water-potential at turgor loss point; Ψ_{solute} : solute potential at full turgor; HV: Huber Value; LA: leaf area; SLA: specific leaf area.
