

Molecular Characterization of Highly Pathogenic Avian Influenza Viruses H5N6 Detected in Denmark 2018-2019

Supplementary Material

Figure S1. Active surveillance for avian influenza virus in clinically healthy wild bird, Denmark, 2018. Birds were tested for avian influenza virus in pools of cloacal swab samples from up to five birds of the same species, sampled at the same time and location. Sampling locations are shown for each pool, with points distributed in concentric circles with origin in the center of the circles. Map made with QGIS (version 3.14.1) (www.qgis.org). Based on map of Denmark from Kortforsyningen (www.kortforsyningen.dk downloaded 26 April 2012).

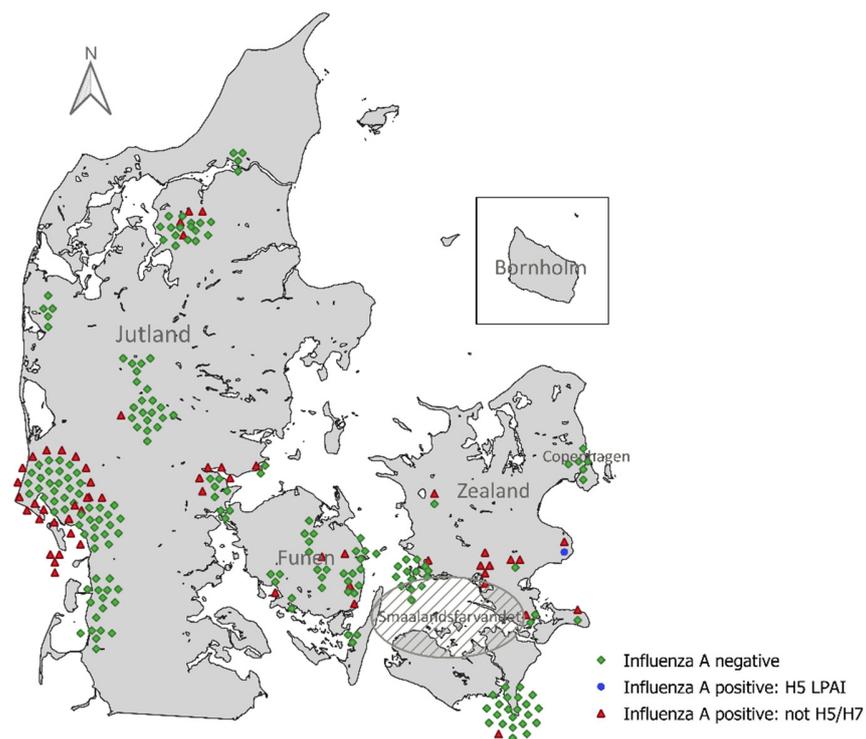

Figure S2. Active surveillance for avian influenza virus in clinically healthy wild bird, Denmark, 2019. Birds were tested for avian influenza virus in pools of cloacal swab samples from up to five birds of the same species, sampled at the same time and location. Sampling locations are shown for each pool, with points distributed in concentric circles with origin in the center of the circles. Map made with QGIS (version 3.14.1) (www.qgis.org). Based on map of Denmark from Kortforsyningen (www.kortforsyningen.dk downloaded 26 April 2012).

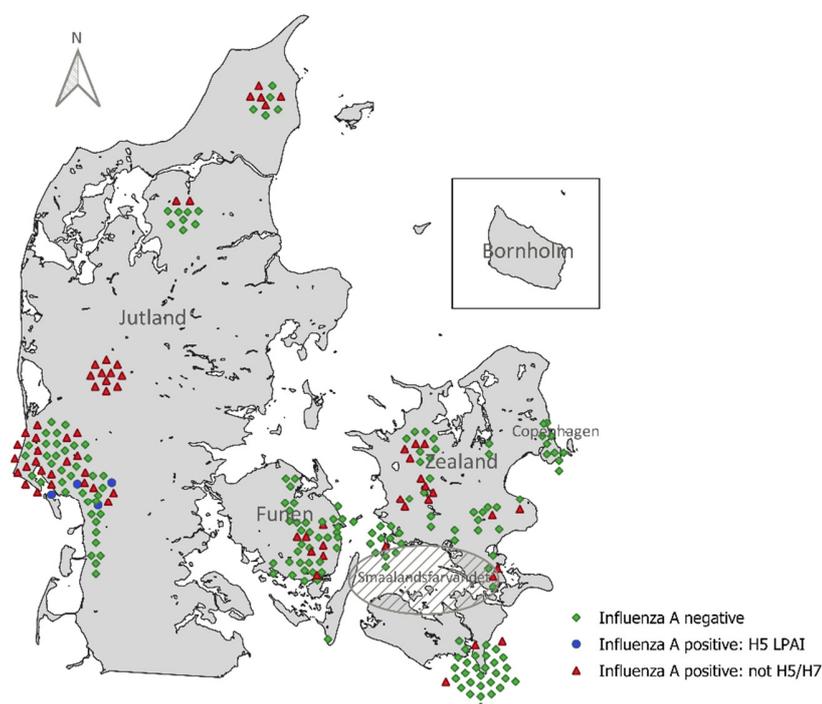

Figure S3: Sampling locations for avian influenza virus wild bird passive surveillance, Denmark, 2018. Map made with QGIS (version 3.14.1) (www.qgis.org). Based on map of Denmark from Kortforsyningen (www.kortforsyningen.dk downloaded 26 April 2012).

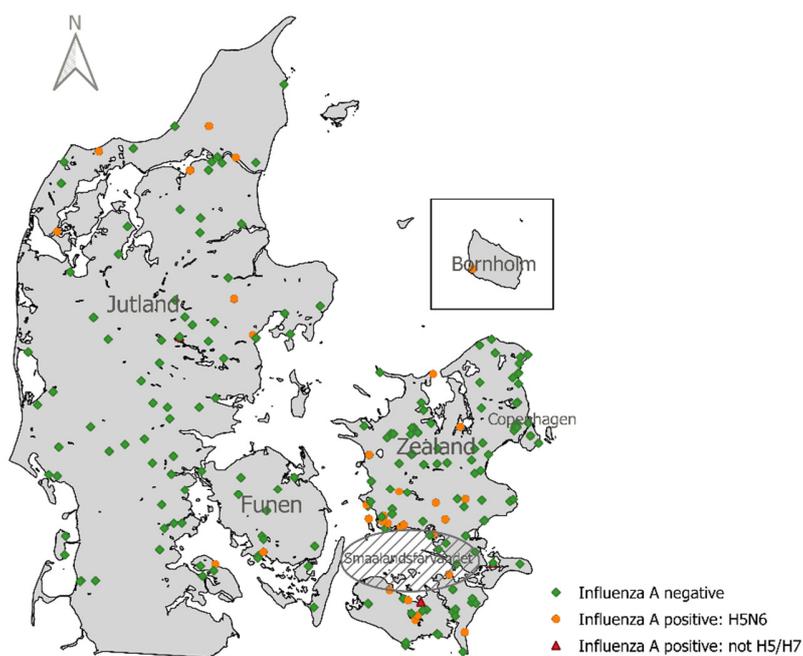

Figure S4: Sampling locations for avian influenza virus wild bird passive surveillance, Denmark, 2019. Map made with QGIS (version 3.14.1) (www.qgis.org). Based on map of Denmark from Kortforsyningen (www.kortforsyningen.dk downloaded 26 April 2012).

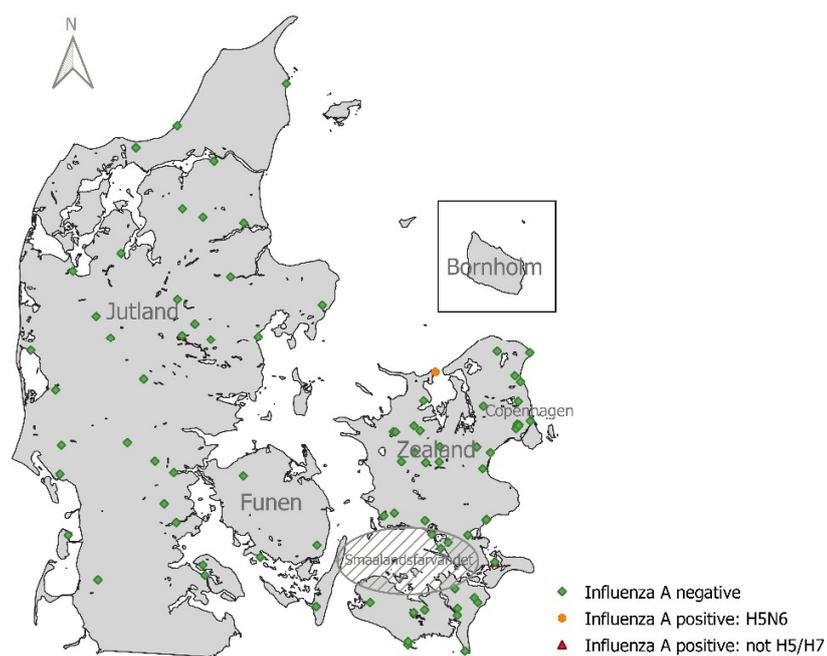

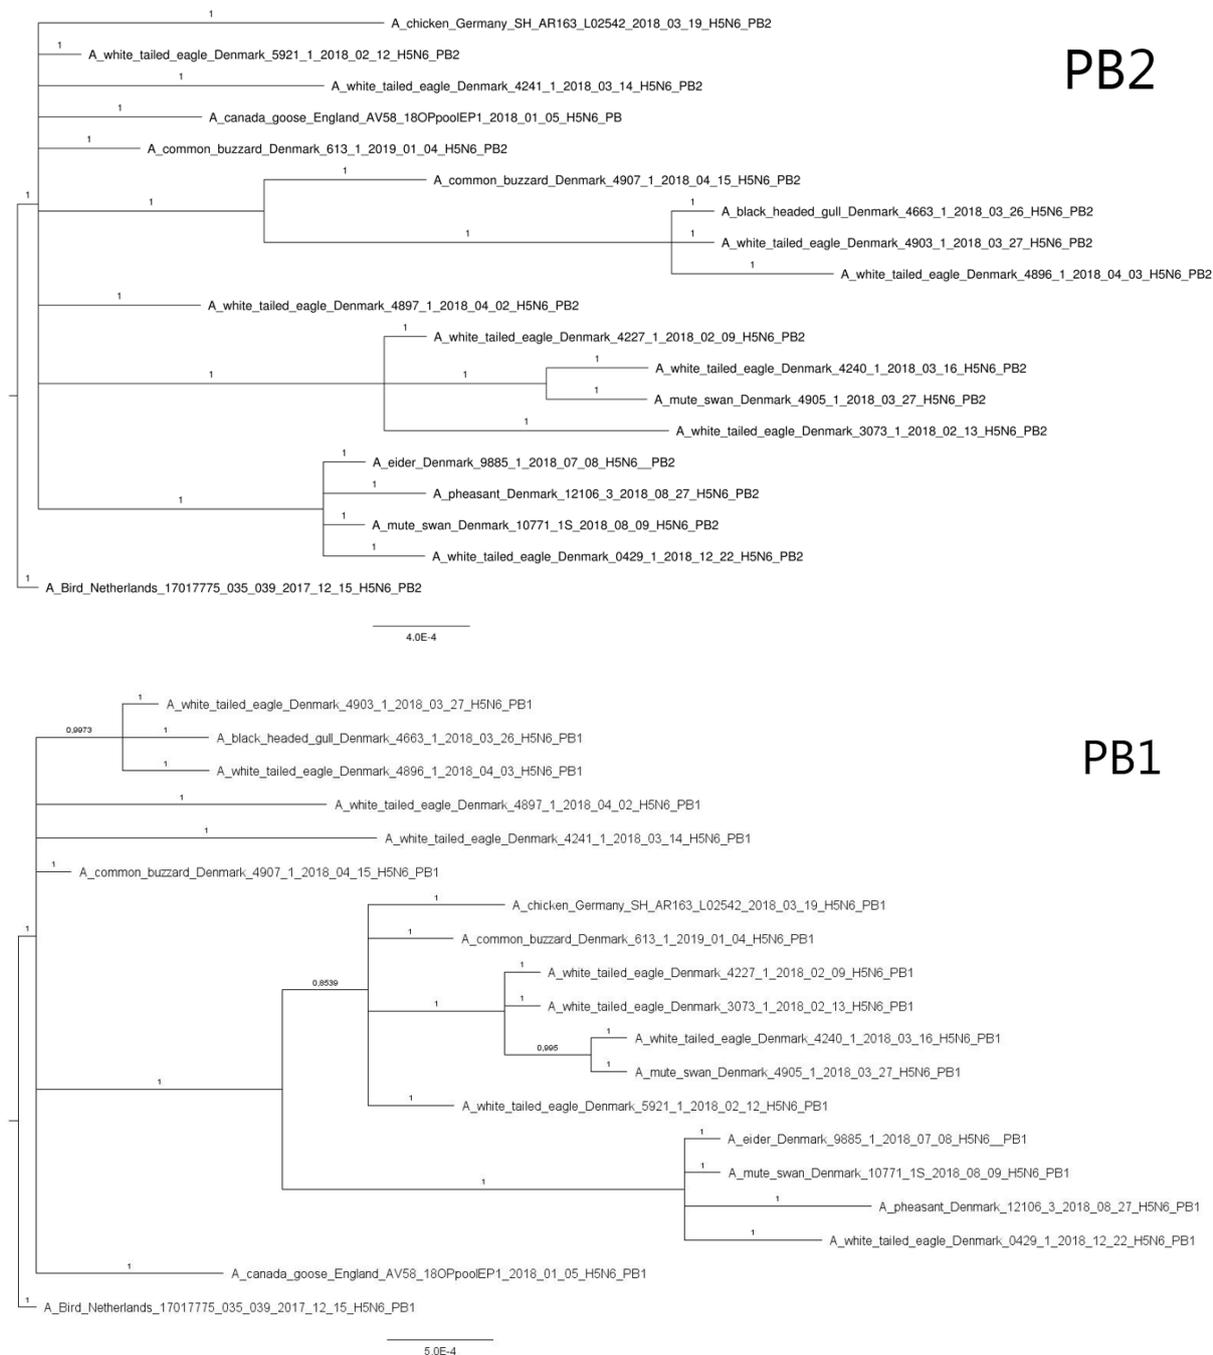

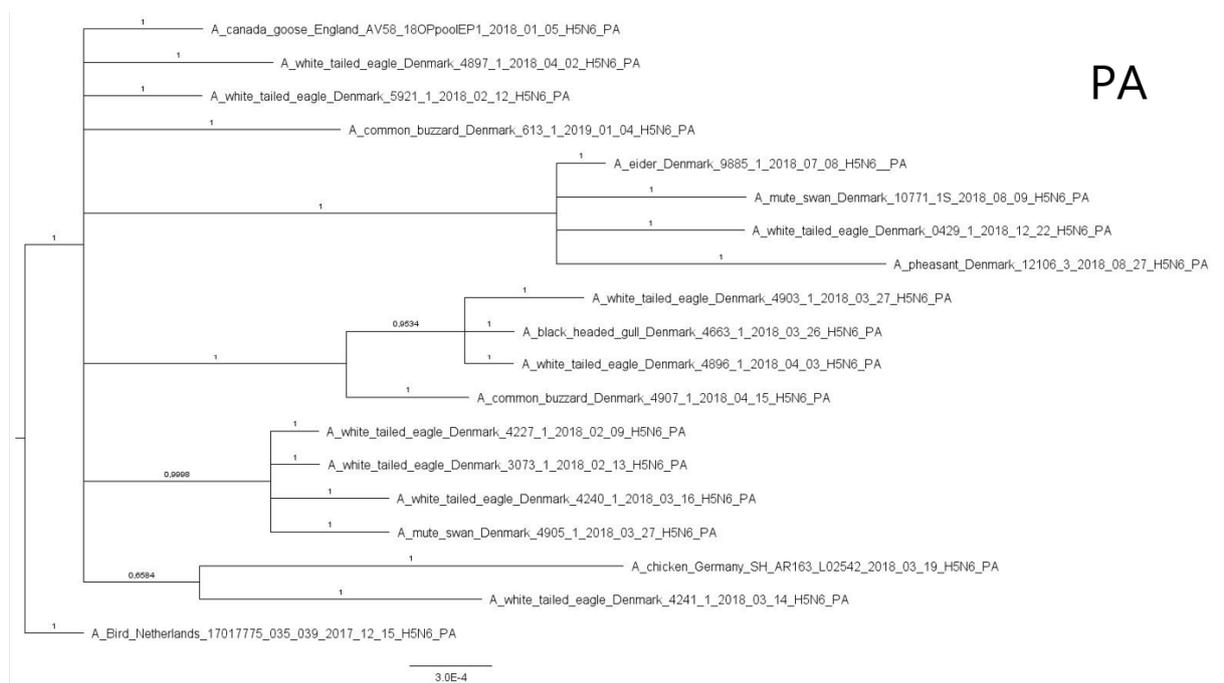

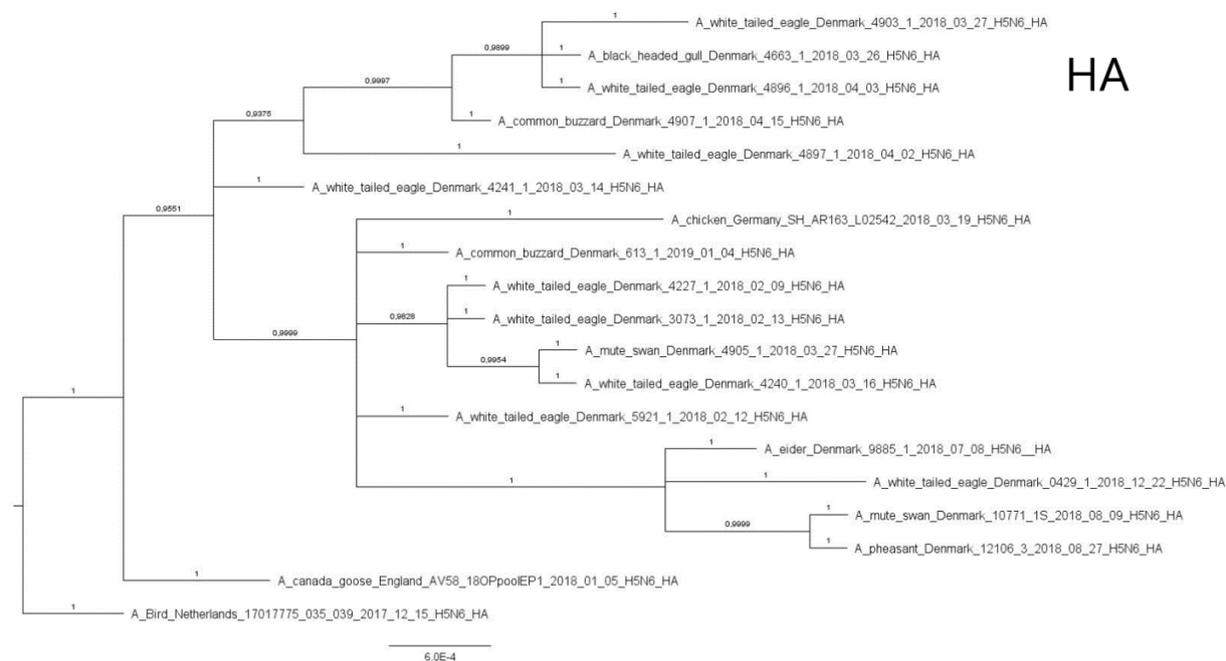

Figure S5. Bayesian phylogenetic analysis performed on each gene segments of H5N6 viruses detected in Denmark 2018-2019. Branch labels represent posterior probabilities. Scale bars indicate nucleotide substitutions per site.

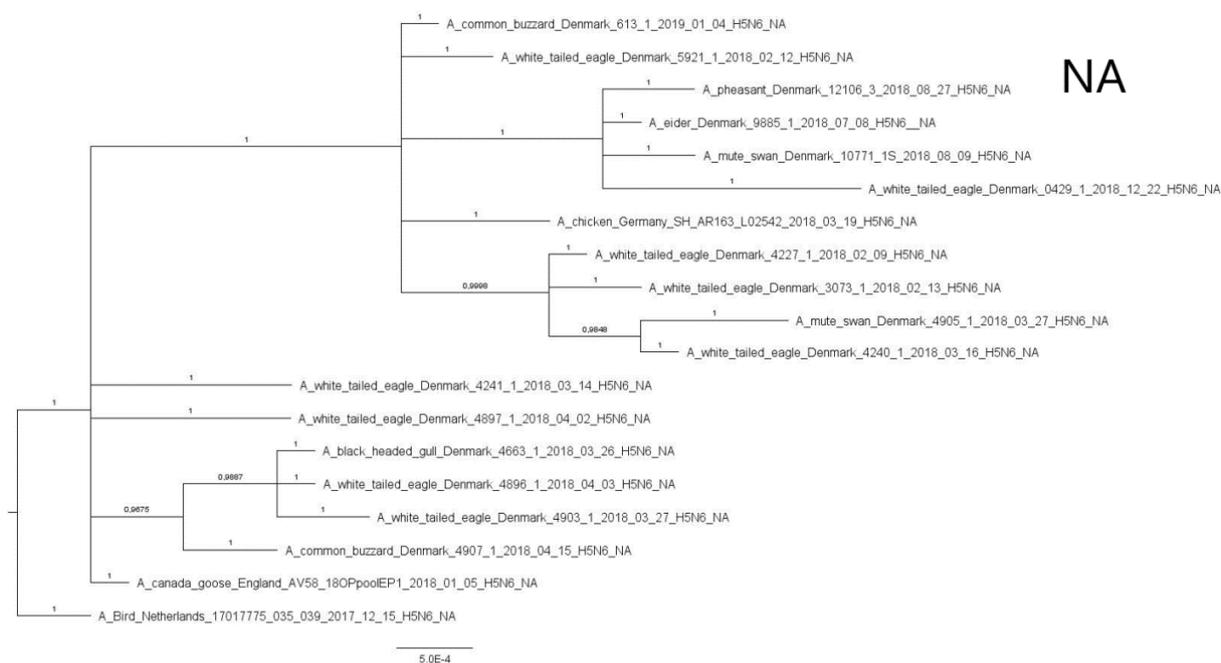

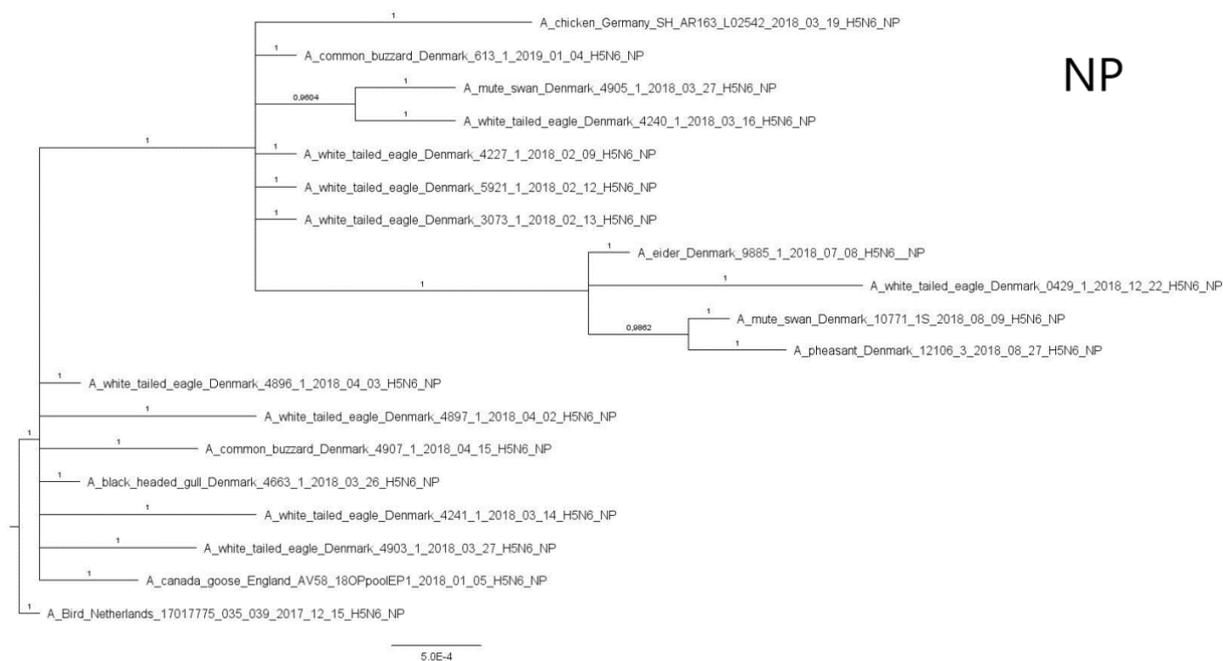

PA

HA

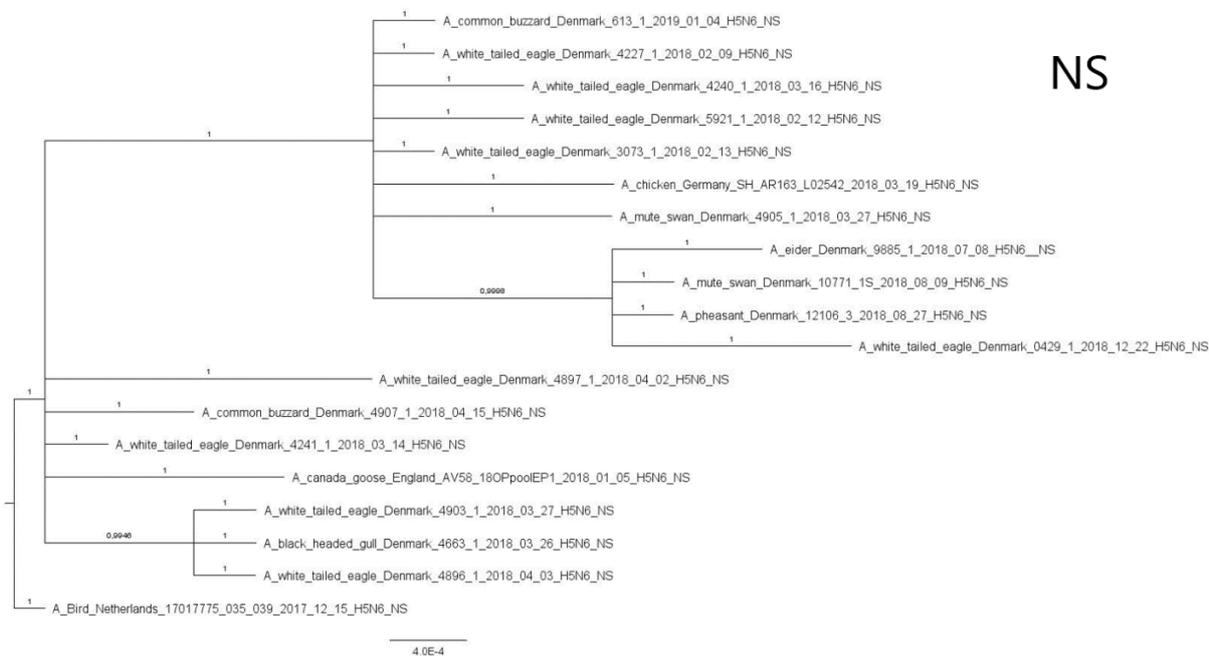

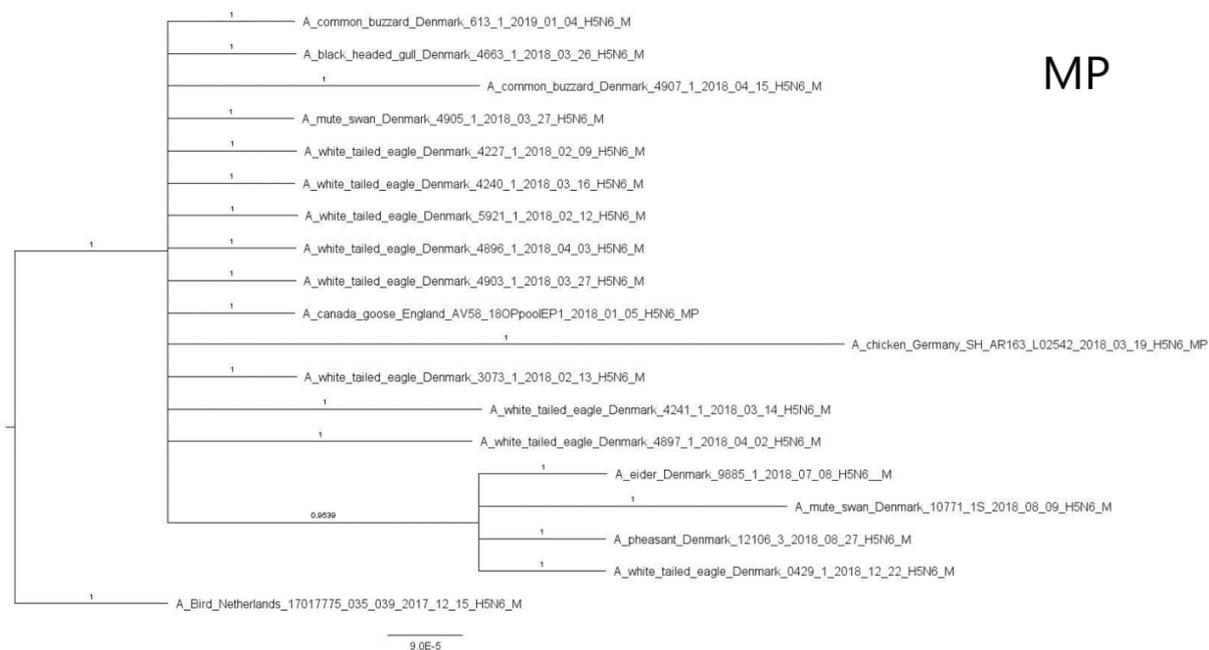

Figure S6. BEAST analysis on concatenated dataset including European clade 2.3.4.4b H5N6 viruses detected in 2017–2019 and representative European clade 2.3.4.4b H5N8 viruses detected in 2016–2017. The gene segments PB1, PA, HA, NP, MP and NS of the influenza viruses included in the analysis were concatenated in that order. The H5N6 viruses isolated in Denmark are in red, the representative H5N8 viruses are in green with the remaining H5N6 viruses in black. Posterior probabilities are denoted above the branches. The scale bar depicts a timeline.

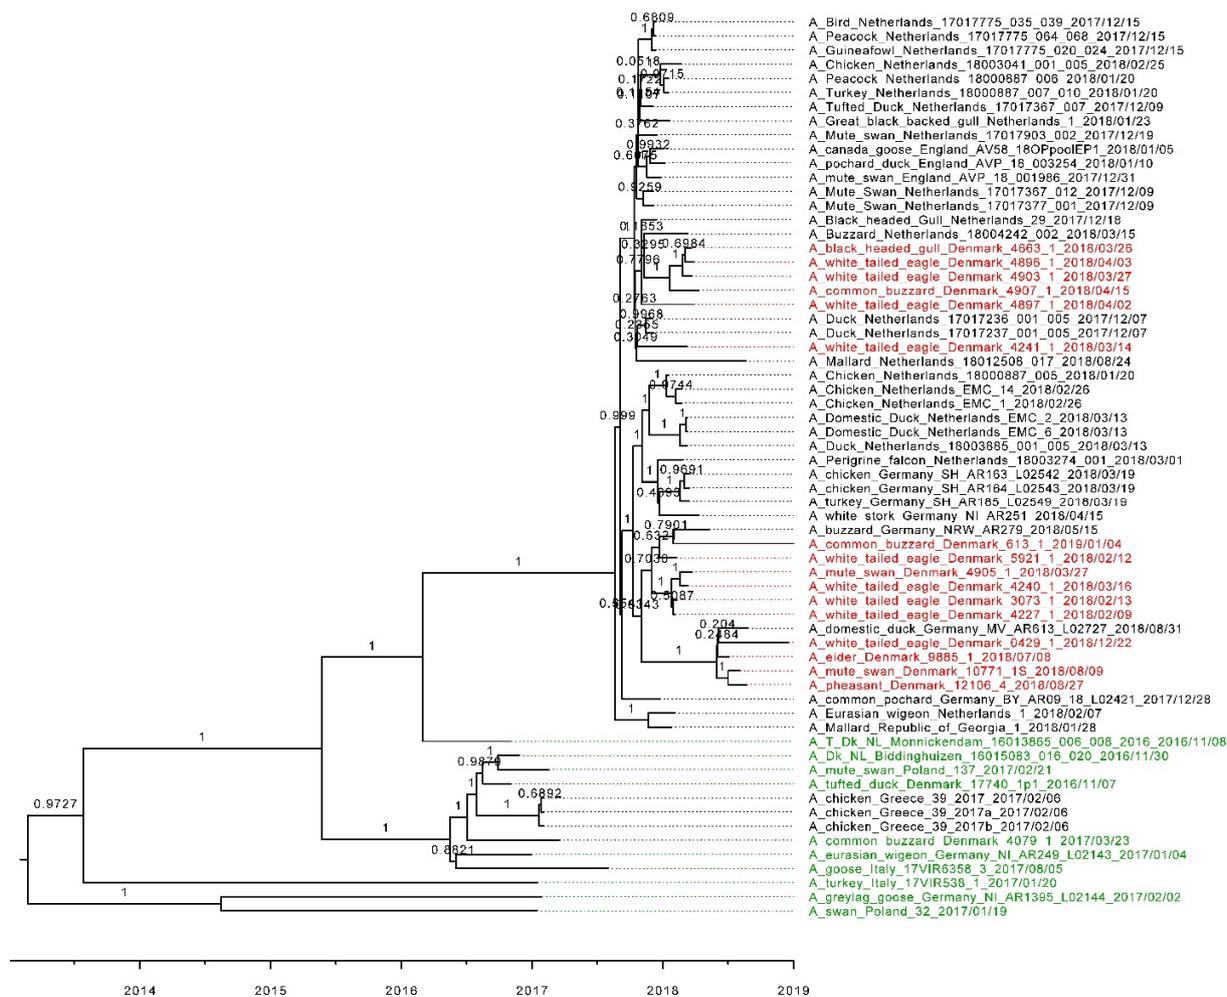

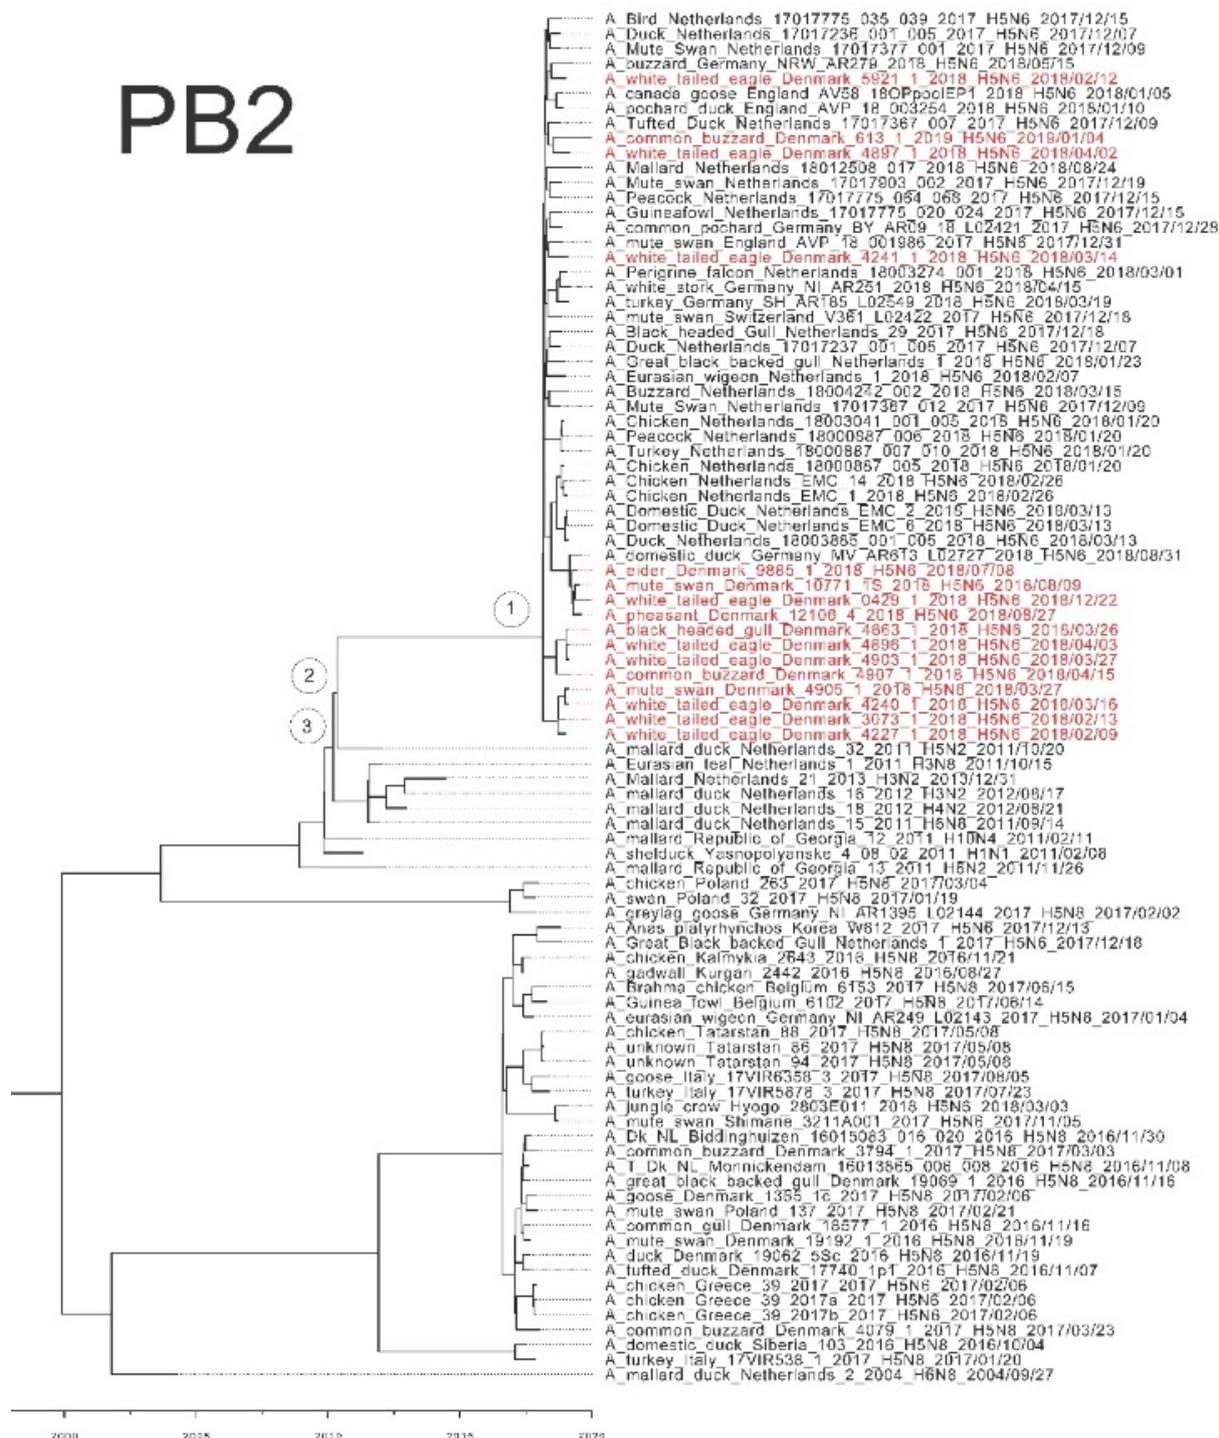

Figure S7. BEAST analysis on HA, NA and PB2 gene segments. Numbers above the nodes represent tMRCA. The HPAI H5N6 viruses from Denmark are in red. The scale bar depicts a timeline.

HA

NA

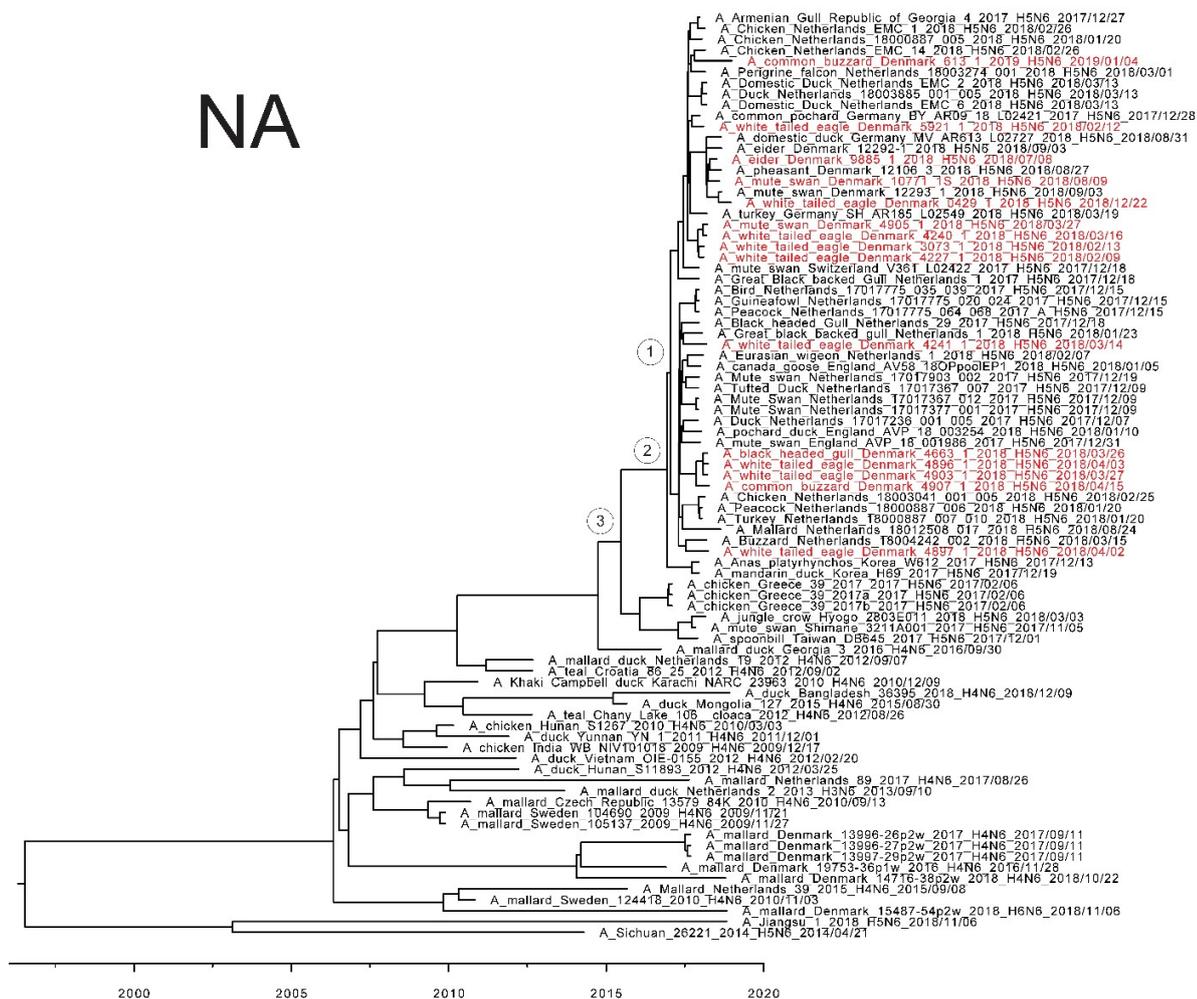

Table S1. Results from active surveillance for avian influenza virus in clinically healthy wild bird, Denmark, 2018

Sampling time, 2018 quarter	Location	Species	No. Birds	No. Pools*	Avian influenza virus positive pools	H5/H7 positive pools
1	Copenhagen	Eurasian coot	5	1	0	0
