

Supplementary Table S1. Relevant histological changes and SARS-CoV-2 nucleoprotein expression in Syrian hamsters after intranasal infection with 10⁴ PFU SARS-CoV-2 B.1.1.7 (Alpha) and euthanised at 7 days post infection (“Infected #1-#6), and in hamsters that were exposed to contact transmission (CT) for 7 days and treated intranasally with saline, PIB, FVP, FVP+PIB, RDV, or RDV+PIB for 7 days (from day -1 to day 6).

NB: In all animals the lungs exhibited a variable degree of increased interstitial cellularity due to leukocyte influx. This is not specifically mentioned in the histological descriptions.

Animal group + no	Treatment, exposure	Histological changes and viral antigen expression (lung)	Virology (PCR) ¹
Infected #1	Infected	Lung (HE): mf to coalescing consolidated areas with type II pc/BEC hyperplasia, leukocyte infiltration ² and some deg cells; mild pa edema, mild pv LC infiltration vAg: a few pos macrophages and very small patches of alveoli with pos AEC	S: 260191 N: 19356510 L: 105225
Saline #1	Saline; CT from Infected #1	Lung (HE): bronchioles with rare individual deg BEC and mild (sub)epithelial leukocyte infiltration; extensive coalescing areas of alveoli with desquamed AEC/AM, some fibrin, activated type II pc, some syncytial cells and some deg cells, a few LC and NL; mild vascular and pv leukocyte infiltration and pa edema vAg: rare pos BEC; multiple large patches of alveoli with pos AEC	S: 71551 N: 4588954 L: 214215063
Saline #2	Saline; CT from Infected #1	Lung (HE): bronchioles with rare individual deg BEC and mild (sub)epithelial leukocyte infiltration; mf consolidated areas with type II pc/BEC hyperplasia, leukocyte infiltration and some deg cells; mf coalescing areas of alveoli with desquamed AEC/AM, some fibrin, activated type II pc, some syncytial cells and some deg cells, a few LC and NL; mild vascular infiltration and pa edema vAg: rare pos BEC; multiple large patches of alveoli with pos AEC	S: 925835 N: 13001195 L: 255314234
Saline #3	Saline; CT from Infected #1	Lung (HE): mf areas of alveoli with desquamed AEC/AM, alveolar edema, activated type II pc, some syncytial cells and some deg cells; other areas with activated type II pc, a few syncytial cells, macrophages, LC and deg cells; mild to mod vascular leukocyte infiltration vAg: multiple large patches of alveoli with pos AEC	S: 63743657 N: 11071723 L: 130573481
Saline #4	Saline; CT from Infected #1	Lung (HE): mf coalescing areas of alveoli with desquamed AEC/AM, some fibrin, activated type II pc, some syncytial cells, some deg cells, a few LC and NL; small consolidated areas with activated type II pc and focal type II pc/BEC hyperplasia; mild vascular infiltration and pa edema vAg: rare pos BEC; multiple large patches of alveoli with pos AEC	S: 64771 N: 13931410 L: 120151650
Saline #5	Saline; CT from Infected #1	Lung (HE): mf coalescing areas of alveoli with desquamed AEC/AM, some fibrin, activated type II pc, some syncytial cells, some deg cells, a few LC and NL; mf consolidated areas with activated type II pc and type II pc/BEC hyperplasia; mild vascular infiltration and pa edema vAg: small patches of alveoli with pos AEC	S: 166482 N: 71845150 L: 130309340
Infected #2	Infected	Lung (HE): mf to coalescing consolidated areas with with activated type II pc and type II pc/BEC hyperplasia, a few syncytial cells, mod numbers of macrophages and a few NL and deg cells; mild to mod vascular infiltration and pa edema; mild pv LC infiltration vAg: rare individual and small patches of alveoli with pos AEC	S: 53452 N: 1553459 L: 110368
PIB #1	Pibrentasvir; CT from Infected #2	Lung (HE): mf to coalescing consolidated areas with focal type II pc/BEC hyperplasia, macrophages, a few NL and deg cells, focal areas with desquamation of AEC/AM and some syncytial cells; mild to mod leukocyte emigration and pv infiltration vAg: numerous small patches of alveoli with pos AEC (within and outside areas of desquamation)	S: 58937939 N: 240222 L: 33935538
PIB #2	Pibrentasvir; CT from Infected #2	Lung (HE): mf, mainly loosely consolidated areas with activated type II pc and focal type II pc/BEC hyperplasia, mod numbers of macrophages, a few NL and deg cells; mild to mod vascular infiltration, mild pv LC infiltration vAg: abundant variably sized patches of alveoli with pos AEC (outside, in the periphery of and within consolidated areas)	S: 12774 N: 1496389 L: 21571524

PIB #3	Pibrentasvir; CT from Infected #2	Lung (HE): mf to coalescing consolidated areas with type II pc/BEC hyperplasia, macrophages, a few NL and deg cells, focal areas with desquamation of AEC/AM and some syncytial cells; mild to mod vascular and pv LC infiltration, mild pa edema vAg: abundant variably sized patches of alveoli with pos AEC (outside, in the periphery of and within consolidated areas)	S: 75551 N: 10667159 L: 32116347
PIB #4	Pibrentasvir; CT from Infected #2	Lung (HE): mf to coalescing consolidated areas with type II pc/BEC hyperplasia, macrophages, a few NL and deg cells, focal areas with desquamation of AEC/AM and some syncytial cells; mild to mod vascular and pv LC infiltration, mild pa edema vAg: extensive, mainly large patches of alveoli with pos AEC (outside and in periphery of consolidated areas)	S: 58071 N: 9445262 L: 16032641
Infected #3	Infected	Lung (HE): mf to coalescing consolidated areas with type II pc/BEC hyperplasia, leukocyte infiltration and some deg cells; mod pa edema; mild pv LC-dom leukocyte infiltration vAg: a few individual pos AEC and macrophages in consolidated areas, several small disseminated patches of alveoli with pos AEC	S: 50238183 N: 4545371 L: 110021
FVP #1	Favipiravir; CT from Infected #3	Lung (HE): mf areas with desquamation of AEC/AM, macrophages, NL, some syncytial cells and some deg cells; mild to mod LC-dom arteritis and pa infiltration vAg: rare individual intact pos BEC; extensive large patches of alveoli with pos AEC	S: 717120 N: <LOD L: 45555269
FVP #2	Favipiravir; CT from Infected #3	Lung (HE): bronchioles with individual deg EC; mf areas with desquamation of AEC/AM, macrophages, NL, some syncytial cells and some deg cells; focal areas of type II pc/BEC hyperplasia; mild to mod LC-dom vascular and pa infiltration vAg: rare individual intact and deg pos BEC; mf disseminated small to large patches of alveoli with pos AEC	S: <LOD N: 16107403 L: 105791946
FVP #3	Favipiravir; CT from Infected #3	Lung (HE): very widespread desquamation of AEC/AM, with fibrin, macrophages, NL, some syncytial cells and some deg cells in alveoli, alveolar edema and extensive alveolar hemorrhage; mild pv LC-dom infiltration vAg: rare individual intact and deg pos BEC; very widespread disseminated and coalescing large patches of alveoli with pos AEC	S: 44627 N: 9746003 L: 66193065
FVP #4	Favipiravir; CT from Infected #3	Lung (HE): very widespread desquamation of AEC/AM, with fibrin, macrophages, NL, some syncytial cells and some deg cells in alveoli, alveolar edema and mf alveolar hemorrhage; focal consolidated areas with type II pc/BEC hyperplasia and leukocyte infiltration; mild pv LC-dom infiltration vAg: mf disseminated variably sized patches of alveoli with pos AEC	S: <LOD N: 23753666 L: 55222081
Infected #4	Infected	Lung (HE): mf to coalescing consolidated areas with type II pc/BEC hyperplasia, leukocyte infiltration and some deg cells; mod pa edema; mild pv LC-dom leukocyte infiltration vAg: a few individual pos AEC and macrophages in consolidated areas, a few mod sized disseminated patches of alveoli with pos AEC	S: 20110 N: 8413686 L: 160505
FVP+PIB #1	Favipiravir and Pibrentasvir; CT from Infected #4	Lung (HE): mf areas with desquamation of AEC/AM, some deg cells, occ syncytial cells, some leukocytes; small consolidated areas with type II pc/BEC hyperplasia, leukocyte infiltration and some deg cells; mild to mod pv LC-dom leukocyte infiltration vAg: many variably sized disseminated patches of alveoli with pos AEC	S: 2268658 N: 2941343 L: 29975435
FVP+PIB #2	Favipiravir and Pibrentasvir; CT from Infected #4	Lung (HE): bronchioles with occ deg EC and desquamated EC in lumen, mild (sub)epithelial LC-dom infiltration; mf areas with desquamation of AEC/AM, some deg cells, occ syncytial cells, some leukocytes; small consolidated area with type II pc/BEC hyperplasia, leukocyte infiltration and some deg cells; mild to mod pv LC-dom leukocyte infiltration vAg: most bronchioles with several individual and patches of intact pos EC; several variably sized patches of alveoli with pos AEC	S: 36979666 N: 4151342 L: 107999927

FVP+PIB #3	Favipiravir and Pibrentasvir; CT from Infected #4	Lung (HE): mf to coalescing consolidated areas with type II pc/BEC hyperplasia, leukocyte infiltration and some deg cells; some areas with desquamation of AEC/AM, some deg cells, occ syncytial cells, some leukocytes; mild pa edema; mild vascular and pv LC-dom leukocyte infiltration vAg: a few individual pos AEC and macrophages in consolidated areas, widespread large patches of alveoli with pos AEC	S: 103771 N: 14027330 L: <LOD
FVP+PIB #4	Favipiravir and Pibrentasvir; CT from Infected #4	Lung (HE): mf to coalescing consolidated areas with type II pc/BEC hyperplasia, leukocyte infiltration and some deg cells; some areas with desquamation of AEC/AM, some deg cells, occ syncytial cells, some leukocytes; mild pa edema; mild vascular and pv LC-dom leukocyte infiltration vAg: a few individual pos AEC and macrophages in consolidated areas, a few disseminated mod sized patches of alveoli with pos AEC	S: 477534 N: 28217555 L: 56590693
Infected #5	Infected	Lung (HE): mf to coalescing consolidated areas with activated type II pc and type II pc/BEC hyperplasia, a few syncytial cells, mod numbers of macrophages, a few NL and deg cells; focal alveolar edema; mild to mod vascular infiltration and pa edema; mild pv LC-dom infiltration vAg: a few individual and small patches of alveoli with pos AEC	S: 42575 N: 43140212511 L: 8736570121
RDV #1	Remdesivir; CT from Infected #5	Lung (HE): widespread activated type II pc; occ syncytial cells vAg: neg	S: <LOD N: <LOD L: <LOD
RDV #2	Remdesivir; CT from Infected #5	Lung (HE): mf extensive areas with desquamation of AEC/AM, macrophages, NL and deg cells, with mild focal type II pc/BEC hyperplasia; very mild (peri)bronchial LC infiltration; mod LC-dom vascular and pv infiltration vAg: a few individual pos intact BEC; several variably sized patches of alveoli with pos AEC	S: <LOD N: <LOD L: <LOD
RDV #3	Remdesivir; CT from Infected #5	Lung (HE): focal areas with desquamation of AEC/AM, activated type II pc, NL and deg cells; mild (peri)arterial LC-dom infiltration vAg: several bronchioles with a few to numerous intact pos EC and a few pos deg cells in lumen; one focal area of alveoli with pos AEC	S: <LOD N: <LOD L: 201109102313
RDV #4	Remdesivir; CT from Infected #5	Lung (HE): focal subpleural area with desquamation of AEC/AM, macrophages, NL and deg cells; small focal consolidated area with type II pc/BEC hyperplasia, a few deg cells and a few NL; mild (peri)arterial LC infiltration vAg: one large area (desquamative lesion) of alveoli with pos AEC	S: <LOD N: <LOD L: 25667286385
Infected #6	Infected	Lung (HE): mf to coalescing consolidated areas with activated type II pc and type II pc/BEC hyperplasia, focal desquamation of AEC/AM, a few syncytial cells, mod numbers of macrophages, a few NL and deg cells; mild to mod LC-dom arteritis and pa infiltration, mod pa edema; mild pv LC infiltration vAg: a few small patches of alveoli with pos AEC	S: 111238 N: 1707945 L: <LOD
RDV+PIB #1	Remdesivir and Pibrentasvir; CT from Infected #6	Lung (HE): a few small focal areas with desquamation of AEC/AM, leukocyte infiltration, activated type II pc and occ deg cells vAg: neg	S: <LOD N: <LOD L: 22827806270
RDV+PIB #2	Remdesivir and Pibrentasvir; CT from Infected #6	Lungs: focal consolidated areas with activated type II pc and type II pc/BEC hyperplasia, occ syncytial cells, macrophages and LC, occ deg cells; focal areas with desquamation of AEC/AM, leukocyte infiltration and activated type II pc; mild to mod pb LC-dom infiltration vAg: very rare individual pos intact BEC and AEC	S: <LOD N: <LOD L: <LOD
RDV+PIB #3	Remdesivir and Pibrentasvir; CT from Infected #6	Lung (HE): focal consolidated area with activated type II pc and type II pc/BEC hyperplasia, occ syncytial cells, macrophages and LC, occ deg cells; smaller focal areas with desquamation of AEC/AM, leukocyte infiltration and activated type II pc; mod pb LC-dom infiltration vAg: several bronchioles with several to numerous pos EC	S: 848238 N: 523848409877 L: 28732905109

RDV+PIB #4	Remdesivir and Pibrentasvir; CT from Infected #6	Lung (HE): multifocal activated type II pc; random small macrophage aggregates vAg: neg	S: <LOD N: <LOD L: <LOD
------------	--------------------------------------------------	----------------------------------------------------------------------------------------------------------	-------------------------------

Legend: AEC – alveolar epithelial cells; AM – alveolar macrophages; BEC – bronchiolar epithelial cells; deg – degenerate; EC – epithelial cells; FVP – Favipiravir; HE – histological features assessed in a hematoxylin-eosin stained section; LC – lymphocyte; mf – multifocal; mod – moderate; neg – negative; NL – neutrophils; NT – nasal turbinates; LC – lymphocytes; LC-dom – lymphocyte dominated; LOD – level of detection; occ – occasional; pb – peribronchiolar; pc – pneumocytes; PF – proteinaceous fluid; PIB – Pibrentasvir; pos – positive; pv – perivascular; RDV – Remdesivir; vAg – viral antigen

¹ PCR: Copies of viral N-RNA/μg of RNA relative to 18S, for each animal determined in throat swabs (S), nasal turbinates (N) and lungs (L) at day 7.

² leukocyte infiltration/leukocyte infiltrates: if not further specified, this implies macrophages, fewer lymphocytes and variable numbers of neutrophils

Supplemental Table S2. Average viral RNA levels (copies of N-RNA/μg of RNA relative to 18S) in throat swabs (day 1, 3, 5, and 7), nasal turbinate (day 7) and right lung (day 7) for groups treated with saline, PIB, FVP, FVP+PIB, RDV, and RDV+PIB. In parenthesis, the p value of each group in comparison to the saline group. Values significantly lower than in the saline group are shown in bold (* = $P \leq 0.05$, ** = $P \leq 0.01$, nonparametric Mann-Whitney test, one-tailed).

Group	Throat swabs				Nasal turbinate (day 7)	Right lung (day 7)
	Day 1	Day 3	Day 5	Day 7		
Saline	<LOD	7.3×10^7	4.3×10^8	1.3×10^7	2.3×10^7	1.7×10^8
PIB	<LOD (P = 0.5)	1.9×10^7 (P = 0.365)	1.5×10^8 (P = 0.365)	1.5×10^7 (P = 0.206)	5.5×10^6 (*P = 0.032)	2.6×10^7 (**P = 0.008)
FVP	<LOD (P = 0.5)	8.4×10^6 (P = 0.143)	2.1×10^7 (P = 0.278)	1.9×10^5 (*P = 0.048)	1.2×10^7 (P = 0.452)	6.8×10^7 (**P = 0.008)
FVP+PIB	<LOD (P = 0.5)	6.5×10^8 (P = 0.365)	5.4×10^8 (P = 0.278)	9.9×10^6 (P = 0.279)	1.2×10^7 (P = 0.365)	4.9×10^7 (**P = 0.008)
RDV	<LOD (P = 0.5)	<LOD (**P = 0.008)	<LOD (**P = 0.008)	<LOD (**P = 0.008)	<LOD (**P = 0.008)	5.7×10^{10} (P = 0.5)
RDV+PIB	<LOD (P = 0.5)	<LOD (**P = 0.008)	2.2×10^5 (*P = 0.016)	2.1×10^5 (P = 0.056)	1.3×10^{11} (P = 0.143)	1.3×10^{10} (P = 0.5)

Supplementary Table S3. Individual hamsters exposed to contact transmission (CT) for 7 days and treated intranasally with FVP, FVP+PIB, RDV, or RDV+PIB for 7 days (from day -1 to day 6) that were tested negative for SARS-CoV-2 infection in one or more of the different detection approaches. NB: All saline and PIB treated hamsters tested positive in all assays.

Treatment	Animal no (#)	PCR ¹			<i>In situ</i> ²	
		Tracheal swab	Nasal turbinate	Lung	IH (vNP)	Histology
FVP	1	+	-	+	+	+
	2	-	+	+	+	+
	4	-	+	+	+	+
FVP+PIB	3	+	-	-	+	+
RDV	1 ^{α, γ}	-	-	-	-	(+)
	2 ^{α, β}	-	-	-	+	+
	3 ^{α, β}	-	-	+	+	+
	4 ^{α, β}	-	-	+	+	+
RDV+PIB	1 ^{α, β}	-	-	+	-	(+)
	2 ^{α, β}	-	-	-	(+)	+
	4 ^{α, γ}	-	-	-	-	(+)

Legend: FVP – Favipiravir; IH - immunohistology; PIB – Pibrentasvir; RDV – Remdesivir; vNP – viral, i.e. SARS-CoV-2 nucleoprotein

¹ PCR: Copies of viral N-RNA/μg of RNA relative to 18S, for each animal determined in throat swabs (S), nasal turbinates (N) and lungs (L) at day 7.

² *In situ*: detection of viral antigen by immunohistology (IH) or histological changes consistent with SARS-CoV-2 infection (consolidated areas with focal hyperplasia of type II pneumocytes/bronchial epithelial cells and/or areas of alveoli with desquamated alveolar epithelial cells/alveolar macrophages, presence of activated type II pneumocytes, evidence of syncytial cells and of degenerate cells). Grading for IH: - negative (no viral antigen detected); (+) very rare individual positive alveolar and/bronchiolar epithelial cells; + variable amount of alveoli with positive alveolar epithelial cells (and positive bronchiolar epithelial cells). Grading for Histology: (+) minimal changes consistent with SARS-CoV-2 infection (increased interstitial cellularity, presence of activated type II pneumocytes; + changes consistent with SARS-CoV-2 infection, as defined above.

^α No evidence of viral shedding at the time of death.

^β Evidence of pulmonary infection (PCR, IH and/or histology).

^γ Infection of animal not confirmed.

Supplementary Figure S1. Closer view of histological changes and viral antigen expression in the lungs of hamsters intranasally infected with SARS-CoV-2 (A) or treated with saline (B) or RDV (C) and housed together as a group of 5 hamsters with an infected hamster; animals were euthanized and examined at day 7. Left column: HE stained sections, right column: consecutive sections stain for SARS-CoV-2 nucleoprotein (NP), immunohistology, hematoxylin counterstain. **A.** Infected hamster (#3). Consolidated area (corresponding to area indicated by the arrow in Figure 6A) with multifocal type II pneumocytes/bronchiolar epithelial hyperplasia (arrows). Viral antigen expression is seen in a few alveolar epithelial cells (AEC) and macrophages (arrowheads). **B.** Saline treated hamster (#4). Focal area (corresponding to area indicated by the arrow in Figure 6B) of alveoli that contain desquamated AEC and/or alveolar macrophages (arrows) and exhibit activated type II pneumocytes (arrowheads). Viral antigen expression is seen in AEC in multiple patches of alveoli (arrows). **C.** RDV treated hamster (#1). **C.** RDV treated hamster (#1). The parenchyma appears cell rich, consistent with increased interstitial cellularity. There are activated type II pneumocytes (arrowheads). There is no evidence of viral antigen expression (right image).
