Results

Initially, we evaluated the optimal dilution ratio to improve amplification and achieve better results in the sample's RT-qPCR assay. By using a pre-dilution of viscous samples, we successfully restored the amplification of the control gene. The results indicated no significant difference between the dilutions (1:1; 1:2 and 1:3) for the detection of positive samples, suggesting that any dilution is effective and provides better results compared to analyzing the sample without dilution (Fig. S1A–S1D). The dilution recommended was the ratio 1:2, as it minimizes the residual interference of PCR and fluorescence inhibitors, resulting in a better amplification signal.

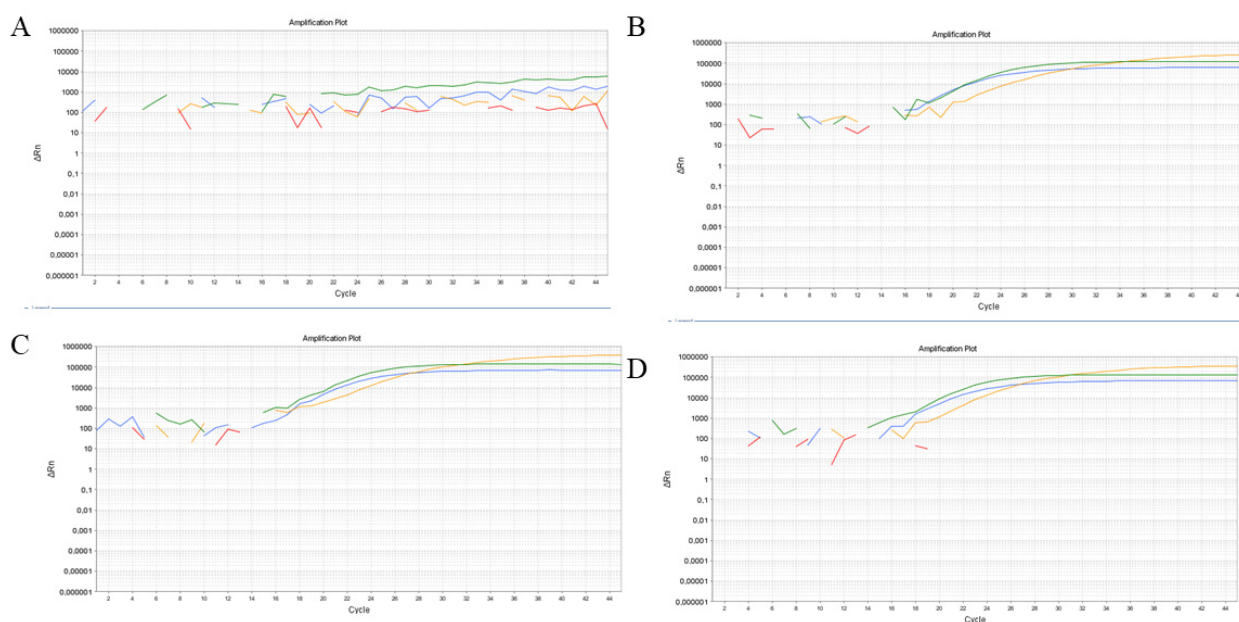

Figure S1. Amplification of positive sample containing SARS-CoV-2 by RT-qPCR, from samples collected in January 2022 and analyzed using Allplex kit. A) Amplification of the sample without dilution. B) Sample amplification after 1:1 dilution. C) Sample amplification after 1:2 dilution (1 sample: 2 saline). D) Sample amplification after 1:3 dilution (1 sample: 3 saline).

All samples collected from August to December 2021 exhibited the presence of different genes, indicating that they corresponded to the Beta, Gamma or other variants not identified by the kit, such as Delta. However, all samples collected in January 2022, which initially yielded inconclusive results in the tests before the dilution process, exhibited amplification for the HV69/70del and N501Y mutation, confirming that they indeed corresponded to the Omicron variant. The individual results of probable variants, as well as the CT of the analyzed targets, are presented in Table S1.

Table S1. Results obtained in the analysis of SARS-Cov-2 variants.

Period	Sample ID	Genes (CT)				Probable variant
		E484K	RdRP	N501Y	HV69/70 del	
Pre-Omicron	1	-	22.93	-	-	Delta
	2	27.18	20.95	26.32	-	Beta or Gamma
	3	30.52	25.98	31.48	-	Beta or Gamma
	4	31.94	29.52	33.23	-	Beta or Gamma
	5	31.97	28.74	28.54	-	Beta or Gamma
	6	-	26.94	-	-	Delta
	7	-	27.85	-	-	Delta
	8	-	27.45	-	-	Delta
	9	-	21.59	-	-	Delta
