

Supplementary Materials: A New Surface Charge Neutralizing Nano-Adjuvant to Potentiate Polymyxins in Killing Mcr-1 Mediated Drug-Resistant *Escherichia coli*

Hyejin Cho, Atanu Naskar, Sohee Lee, Semi Kim and Kwang-sun Kim

Table S1. Sequence of synthesized mobilized colistin resistance gene (*mcr-1*). The sequences of *mcr-1* were taken from NCBI protein database (GenBank ID: ASK04346.1) and further codon optimized by GenSmart™ Codon Optimization (ver. Beta 1.0; <https://www.genscript.com/tools/gensmart-codon-optimization>; GenScript, Piscataway, NJ, USA). Red sequences indicate the modified DNA sequences by codon optimization.

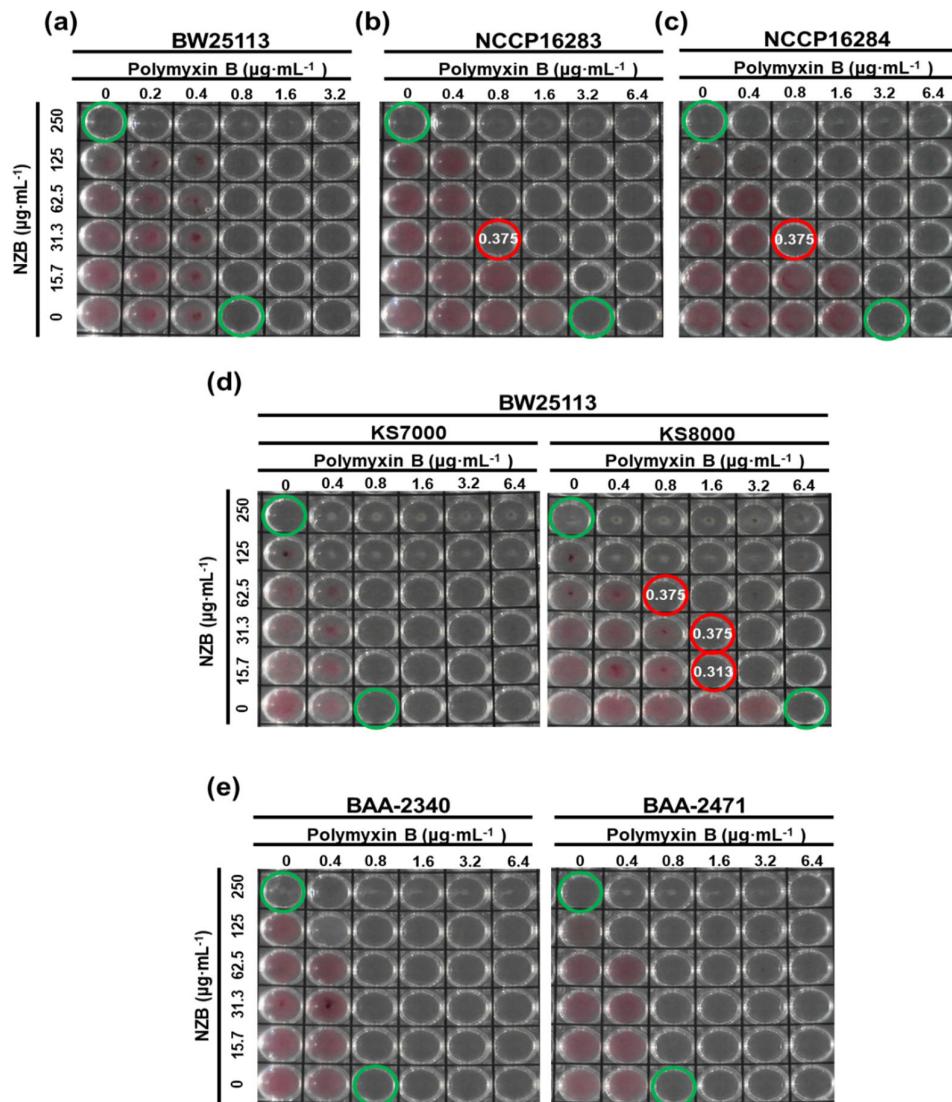

Figure S1. Synergy activity of NZB to polymyxin B (PolB) against *E. coli* cells. Checkerboard assays for (a) BW25113 and (b)–(d) *mcr-1* harboring *E. coli* cells either plasmid incorporated (pQE60 or pQE60-*mcr-1* in BW25113, i.e. KS7000 or KS8000, respectively) or clinical isolates (NCCP16283 and 16284), (e) MDR *E. coli* cells (BAA-2340 and -2471) were shown. The MIC point of NZB and PolB was shown in green circle. Synergistic positions (FICI < 0.5) were indicated with red circles. One of the representatives from $n = 3$ was shown. FICI values were indicated in Table 1. The strain information is available in Table S1.

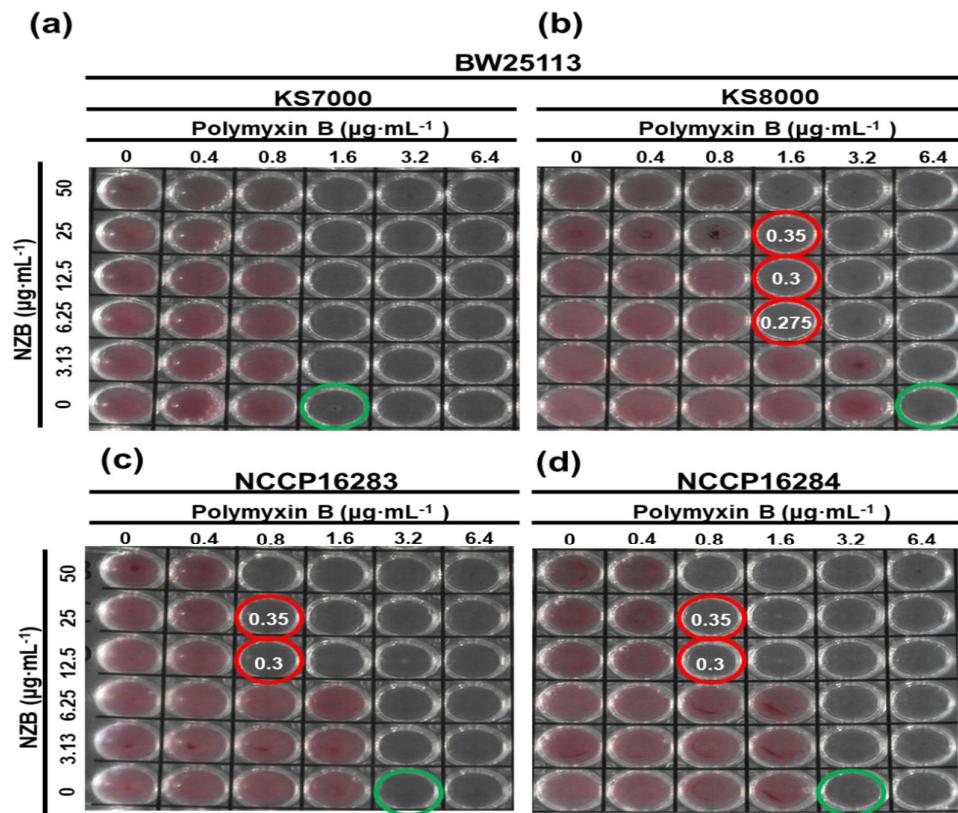

Figure S2. Synergistic activity of NZB to polymyxin B (PolB) against *Mcr-1* expressing *E. coli* cells. Checkerboard assays results for (a) KS7000 (pQE60 in BW25113; non-*mcr-1*), (b) KS8000 (pQE60-*mcr-1* in BW25113), (c) NCCP16283, and (d) NCCP16284 were shown. The MIC point of PolB was shown in green circle. Synergistic positions (FICI < 0.5) were indicated with red circles. One of the representatives from $n = 3$ was shown. The stain information is available in Table S2. FICI values were shown in Table 1.

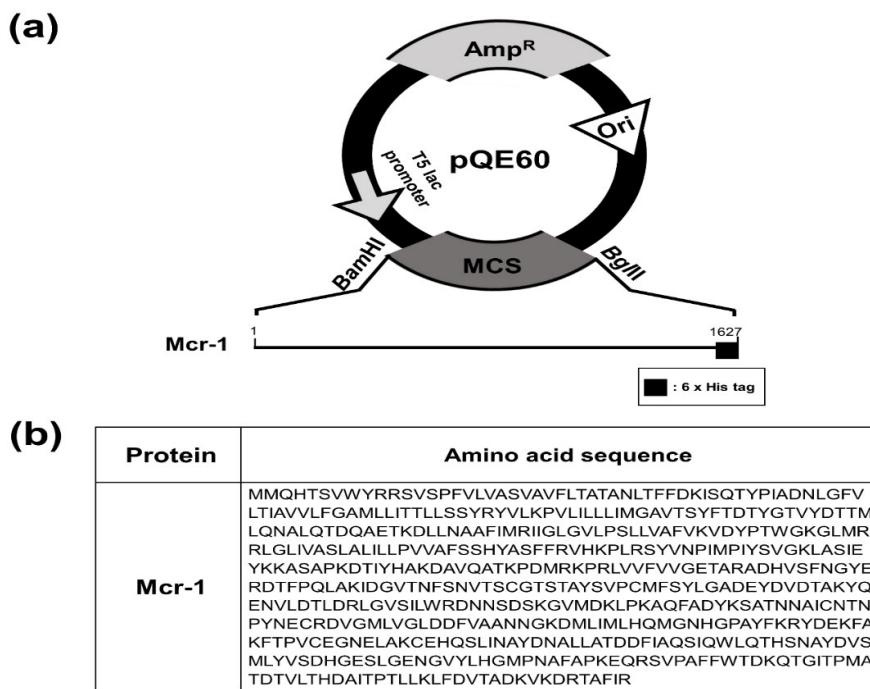

Figure S3. Features of Mcr-1 protein expression plasmid (pQE60-*mcr-1*). (a) Schematic representation of Mcr-1 protein coding regions with C-terminal histidine tag in pQE60 vector and (b) amino acid sequences of Mcr-1.

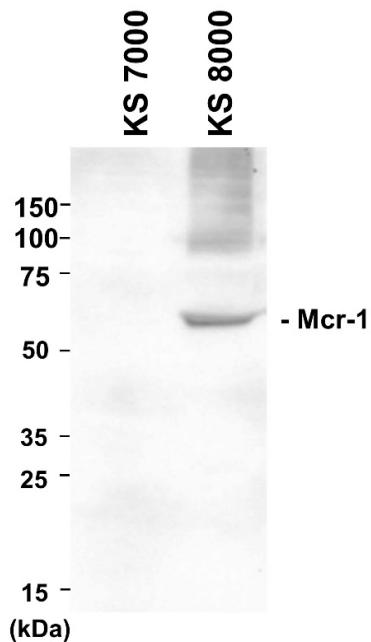

Figure S4. Expression of Mcr-1 protein. Mcr-1 expression from KS7000 (pQE60) and KS8000 (pQE60-*mcr-1*) strains was detected by western blotting with antibodies against His-tag. Image acquisition and the quantitative analysis were performed by using the ChemiDoc MP Imaging System (Bio-Rad, Hercules, CA, USA) and Image Lab (ver 5.2.1; Bio-Rad, Hercules, CA, USA).

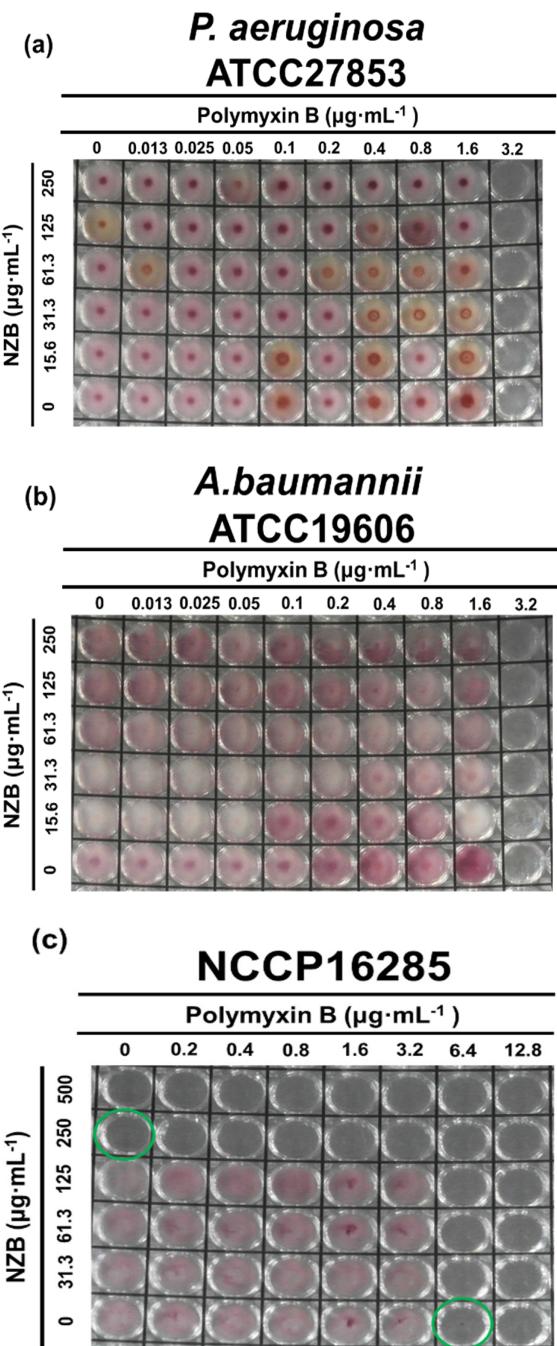

Figure S5. Synergistic activity of NZB to polymyxin B (PolB) against non-*E. coli* Gram-negative strains. Checkerboard assays results for (a) ATCC27853 (*P. aeruginosa*), (b) ATCC19606 (*A. baumannii*), and (c) NCCP16285 (*Klebsiella pneumoniae mcr-1* clinical isolates) were shown. One of the representatives from $n = 3$ was shown. The MIC point of PolB was shown in green circle. Synergistic positions ($\text{FICI} < 0.5$) were indicated with red circles. FICI values were indicated in Table 1.

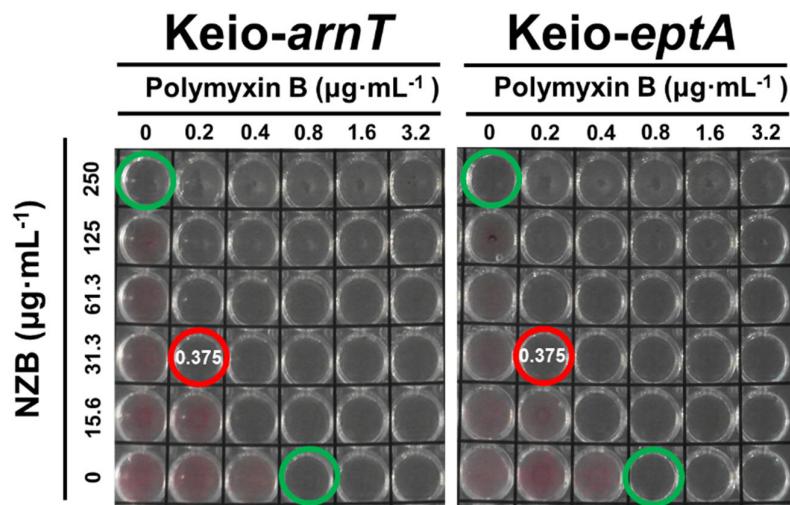

Figure S6. Evaluation of synergistic activity of Mcr-1 modified gene knockouts. Checkerboard assays for NZB and polymyxin B (PolB) against *Keio-arnT* (left) and *Keio-eptA* (right) were shown. One of the representatives from $n = 3$ was shown. The MIC point of PolB was shown in green circle. Synergistic positions ($\text{FICI} < 0.5$) were indicated with red circles. FICI values were shown in Table 1.
