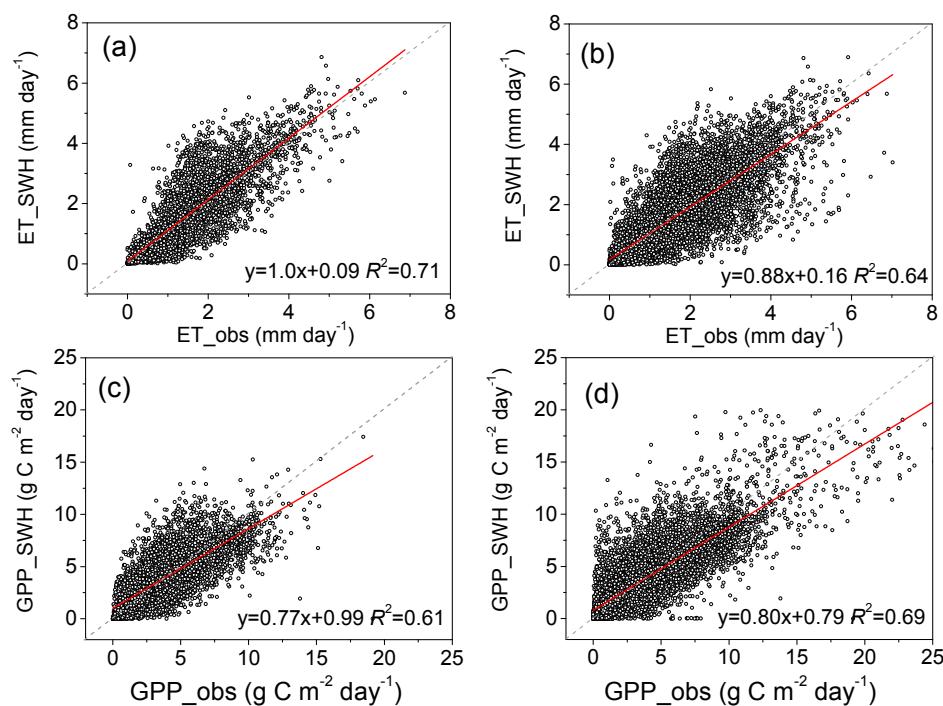

Figure S1. Performances of the SWH model in estimating ET (a,b) and GPP (c,d) at 32 sites, which were used for calibration (a,c) and the remaining sites for validation (b,d).

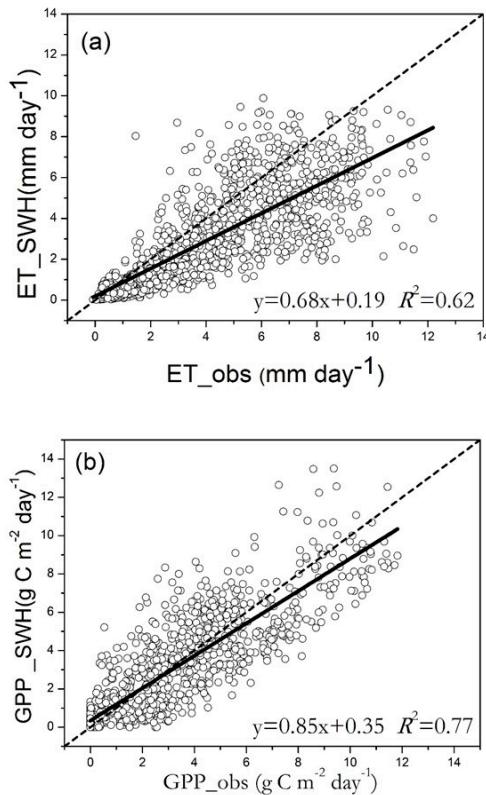

Figure S2. Comparisons of eight-day ET (a) and GPP (b) derived from eddy covariance and estimated by the regionalized SWH model, which was driven by the 10-km interpolated meteorological products.

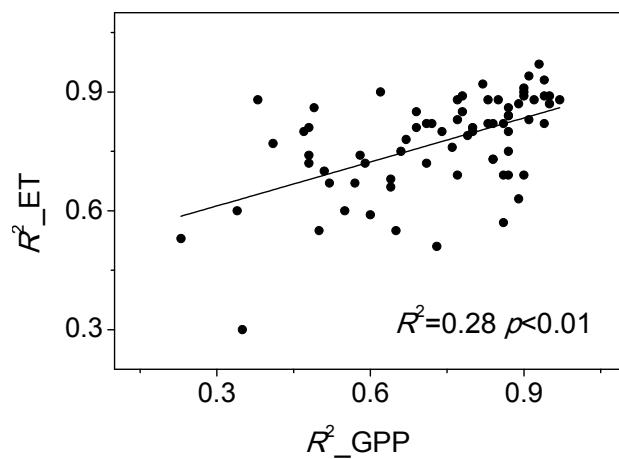

Figure S3. Correlation between the model performance on GPP simulation and ET simulation. R^2_{GPP} and R^2_{ET} are the determinant coefficient of the relationship between modeled and measured GPP and ET, respectively.
