

Supplementary **Table 3.** Combination Index (CI)

| | IIF 10 | Time |
|---------|--------|------|
| EGCG 20 | >1 | 24 h |
| EGCG 20 | <1 | 48 h |
| EGCG 20 | <1 | 72 h |

Supplementary Table 3. Synergy evaluation of EGCG ($\mu\text{g/mL}$) and IIF (μM) treatment effects with the combination index (CI). MTT assay data in BE(2)-C cells, after 24-48-72 h treatment, were used to calculate additive ($=1$), synergistic (<1) or antagonistic (>1) effects as described in Materials and Methods.
