

Supplementary **Table 4.** Combination index (CI)

	IIF 10	Time
EGCG 20	<1	48 h
EGCG 20	>1	72 h

Supplementary Table 4: Synergy evaluation of EGCG ($\mu\text{g/mL}$) and IIF (μM) treatment effects with the combination index (CI). Vitality was assayed by Trypan blue in NCSC after 48 and 72 h treatment. Additive ($=1$), synergistic (<1) or antagonistic (>1) effects were evaluated as described in Materials and Methods.
