**Supplemental Figure S1.** Forest plot of the association of magnesium with brain volumes in participants at visit 5.

*Multiple linear regression models adjusted for age, sex, race/center, education, total intracranial volume, LDL and HDL cholesterol, body-mass index, sodium, potassium, calcium, smoking status, hypertension, hypertension medication use, history of coronary heart disease and heart failure, diabetes, eGFR, c-reactive protein, APOE allele. 1-SD Mg: 0.2 mg/dL.

Supplemental Figure S2. Forest plot of the association of magnesium with subclinical cerebrovascular disease in participants at visit 5.

Odds ratios of subclinical cerebrovascular disease per 1-SD increase in serum Mg

	OR (95% CI)
Cortical Infarcts	
Overall	1.11 (0.90, 1.37)
Men	0.94 (0.63, 1.40)
Women	1.21 (0.91, 1.59)
Black	1.16 (0.77, 1.74)
White	1.16 (0.77, 1.74)
Subcortical Infarcts	
Overall	0.76 (0.64, 0.89)
Men	0.73 (0.54, 0.99)
Women	0.73 (0.60, 0.90)

Results from logistic regression (infarcts) and linear regression (WMH volume) adjusted for:

*Model 1: age, race/center, and education. 1-SD Mg: 0.2 mg/dL.

**Model 2: model 1, plus LDL and HDL cholesterol, body-mass index, sodium, potassium, calcium, smoking status, hypertension, hypertension medication use, history of coronary heart disease and heart failure, diabetes, eGFR, c-reactive protein, APOE allele. 1-SD Mg: 0.2 mg/dL.

† Additionally adjusted for total intracranial volume. WMH: white matter hyperintensities.

Results from logistic regression (infarcts) and linear regression (WMH volume) adjusted for:

*Model 1: age, sex, center, and education. 1-SD Mg: 0.2 mg/dL.

**Model 2: model 1, plus LDL and HDL cholesterol, body-mass index, sodium, potassium, calcium, smoking status, hypertension, hypertension medication use, history of coronary heart disease and heart failure, diabetes, eGFR, c-reactive protein, APOE allele. 1-SD Mg: 0.2 mg/dL.

† Additionally adjusted for total intracranial volume. WMH: white matter hyperintensities.
