

Table S1. Meta-Analysis of Observational Studies in Epidemiology (MOOSE) checklist.

Section/topic	#	Checklist item	Reported on page #
TITLE			
Title	1	Identify the report as a systematic review, meta-analysis, or both.	1
ABSTRACT			
Structured summary	2	Provide a structured summary including, as applicable: background; objectives; data sources; study eligibility criteria, participants, and interventions; study appraisal and synthesis methods; results; limitations; conclusions and implications of key findings; systematic review registration number.	1
INTRODUCTION			
Rationale	3	Describe the rationale for the review in the context of what is already known.	1,2
Objectives	4	Provide an explicit statement of questions being addressed with reference to participants, interventions, comparisons, outcomes, and study design (PICOS).	1,2
METHODS			
Protocol and registration	5	Indicate if a review protocol exists, if and where it can be accessed (e.g., Web address), and, if available, provide registration information including registration number.	NA
Eligibility criteria	6	Specify study characteristics (e.g., PICOS, length of follow-up) and report characteristics (e.g., years considered, language, publication status) used as criteria for eligibility, giving rationale.	Table 1.
Information sources	7	Describe all information sources (e.g., databases with dates of coverage, contact with study authors to identify additional studies) in the search and date last searched.	2
Search	8	Present full electronic search strategy for at least one database, including any limits used, such that it could be repeated.	2, Figure 1, Table S2
Study selection	9	State the process for selecting studies (i.e., screening, eligibility, included in systematic review, and, if applicable, included in the meta-analysis).	2,3, Figure 1,

			Table S2
Data collection process	10	Describe method of data extraction from reports (e.g., piloted forms, independently, in duplicate) and any processes for obtaining and confirming data from investigators.	3
Data items	11	List and define all variables for which data were sought (e.g., PICOS, funding sources) and any assumptions and simplifications made.	3
Risk of bias in individual studies	12	Describe methods used for assessing risk of bias of individual studies (including specification of whether this was done at the study or outcome level), and how this information is to be used in any data synthesis.	3, 4
Summary measures	13	State the principal summary measures (e.g., risk ratio, difference in means).	3, 4
Synthesis of results	14	Describe the methods of handling data and combining results of studies, if done, including measures of consistency (e.g., I^2) for each meta-analysis.	3, 4
Risk of bias across studies	15	Specify any assessment of risk of bias that may affect the cumulative evidence (e.g., publication bias, selective reporting within studies).	3, 4
Additional analyses	16	Describe methods of additional analyses (e.g., sensitivity or subgroup analyses, meta-regression), if done, indicating which were pre-specified.	3, 4
RESULTS			
Study selection	17	Give numbers of studies screened, assessed for eligibility, and included in the review, with reasons for exclusions at each stage, ideally with a flow diagram.	4, 5
Study characteristics	18	For each study, present characteristics for which data were extracted (e.g., study size, PICOS, follow-up period) and provide the citations.	Table 1.
Risk of bias within studies	19	Present data on risk of bias of each study and, if available, any outcome level assessment (see item 12).	Figure S1, Figure S2
Results of individual studies	20	For all outcomes considered (benefits or harms), present, for each study: (a) simple summary data for each intervention group (b) effect estimates and confidence intervals, ideally with a forest plot.	9-13
Synthesis of results	21	Present results of each meta-analysis done, including confidence intervals and measures of consistency.	9-14
Risk of bias across studies	22	Present results of any assessment of risk of bias across studies (see Item 15).	Figure S1,

			Figure S2
Additional analysis	23	Give results of additional analyses, if done (e.g., sensitivity or subgroup analyses, meta-regression [see Item 16]).	Table 2
DISCUSSION			
Summary of evidence	24	Summarize the main findings including the strength of evidence for each main outcome; consider their relevance to key groups (e.g., healthcare providers, users, and policy makers).	15, 16
Limitations	25	Discuss limitations at study and outcome level (e.g., risk of bias), and at review-level (e.g., incomplete retrieval of identified research, reporting bias).	16
Conclusions	26	Provide a general interpretation of the results in the context of other evidence, and implications for future research.	16
FUNDING			
Funding	27	Describe sources of funding for the systematic review and other support (e.g., supply of data); role of funders for the systematic review.	16

Table S2. Search strategy.

Liver cancer

((("coffee"[MeSH Terms] OR "coffee"[All Fields]) OR
 ("tea"[MeSH Terms] OR "tea"[All Fields]) OR
 ("beverages"[MeSH Terms] OR "beverages"[All Fields])
 OR ("diet"[MeSH Terms] OR "diet"[All Fields]) OR
 ("diet"[MeSH Terms] OR "diet"[All Fields] OR
 "dietary"[All Fields])) AND (("liver"[MeSH Terms] OR
 "liver"[All Fields]) OR hepatocellular[All Fields])) AND
 (("neoplasms"[MeSH Terms] OR "neoplasms"[All Fields]
 OR "cancer"[All Fields]) OR ("carcinoma"[MeSH Terms]
 OR "carcinoma"[All Fields]))

Biliary tract cancer

((("coffee"[MeSH Terms] OR "coffee"[All Fields]) OR
 ("tea"[MeSH Terms] OR "tea"[All Fields]) OR
 ("beverages"[MeSH Terms] OR "beverages"[All Fields])
 OR ("diet"[MeSH Terms] OR "diet"[All Fields]) OR
 ("diet"[MeSH Terms] OR "diet"[All Fields] OR
 "dietary"[All Fields])) AND (("biliary tract"[MeSH Terms]
 OR ("biliary"[All Fields] AND "tract"[All Fields]) OR
 "biliary tract"[All Fields]) OR ("bile ducts"[MeSH Terms]
 OR ("bile"[All Fields] AND "ducts"[All Fields]) OR "bile
 ducts"[All Fields] OR ("bile"[All Fields] AND "duct"[All
 Fields]) OR "bile duct"[All Fields]) OR
 ("gallbladder"[MeSH Terms] OR "gallbladder"[All
 Fields])) AND (("neoplasms"[MeSH Terms] OR
 "neoplasms"[All Fields] OR "cancer"[All Fields]) OR
 ("carcinoma"[MeSH Terms] OR "carcinoma"[All Fields]))

Table S3. Excluded studies.

Study	Reasons for exclusion
<i>Liver cancer</i>	
Kurozawa, 2005	fatal cases; not sufficient coffee intake categories
Shimazu, 2005	not sufficient coffee intake categories
Michikawa, 2012	overlap with Inoue 2009; not sufficient coffee intake categories
La Vecchia, 1989	overlap with Gallus 2002
Kuper 2000	overlap with Gallus 2002
Ohfuji 2006	not sufficient coffee intake categories
Wakai, 2007	fatal cases; not sufficient coffee intake categories
Ohishi, 2008	not sufficient coffee intake categories
Kanazir, 2010	not sufficient coffee intake categories
Trichopoulos, 2011	not sufficient coffee intake categories
Jang, 2013	not sufficient coffee intake categories
Patil, 2013	not sufficient coffee intake categories
Aleksandrova, 2015	not sufficient coffee intake categories
<i>Biliary tract cancer</i>	
Kato, 1989	not sufficient coffee intake categories
Zatonski, 1992	not sufficient coffee intake categories
Ghadirian, 1993	not sufficient coffee intake categories
Strom, 1995	not sufficient coffee intake categories
Pandey, 2002	not sufficient coffee intake categories

Figure S1. Funnel plot for BTC risk of the highest *versus* lowest (reference) category of coffee consumption.

Figure S2. Funnel plot liver cancer risk of the highest *versus* lowest (reference) category of coffee consumption.
