

Supplementary Materials

Figure S1. Representative comet images of human lymphocytes stained with ethidium bromide solution. (A) negative control (DMSO); (B) positive control (H_2O_2 , 30 mM); (C) NEW (4 $\mu\text{L}/\text{mL}$); (D) untreated aflatoxins (AF at 6 ng/mL); (E), aflatoxins treated with NEW (AF + NEW at 6 ng/mL). Inset at higher magnification shows the differences in DNA migration pattern.
