

Supplementary Figure S2 Orth *et al.*

Percentage of samples with consistent classification in high/low expression accross both cores

consistent inconsistent

Marker combination
for EwS diagnosis

Supplementary Figure S2: BCL11B and GLG1 show moderate intra-tumoral staining heterogeneity in EwS. Pie charts indicating EwS samples with two cores evaluated in each staining ($n=96$) that were classified as high or low expressing the respective marker consistently (grey) or inconsistently (light red) across both cores.
