Characterisation of Ovarian Cancer Cell Line NIH-OVCAR3 and Implications of Genomic, Transcriptomic, Proteomic and Functional DNA Damage Response Biomarkers for Therapeutic Targeting

Alice Bradbury, Rachel O'Donnell, Yvette Drew, Nicola J Curtin and Sweta Sharma Saha

Figure S1. Sensitivity of NIH-OVCAR3 cells to Cisplatin. NIH-OVCAR3 cells were exposed to Cisplatin for 48 hrs. Media was replaced with drug free media for 21 days to allow colony formation. Data are the mean and standard deviation of at least three independent experiments.

Figure S2. Confirmation of loss of TP53 function in NIH-OVCAR3 cells. NIH-OVCAR3 and A2780 cells were exposed to Nutlin-3 at indicated concentrations for 4 hrs before western blotting. The blots were cut at appropriate molecular weight markers before chemiluminescent detection of protein bands.

Figure S3. Figure 2 (Original western blot images): Western blot confirming the loss of TP53 function in NIH-OVCAR3 cells. Densitometry calculated using ImageJ software, value given is AUC – background to 1 decimal place. The blots were cut at appropriate molecular weight markers before chemiluminescent detection of protein bands.

Figure S4. Figure 3A (Original western blot images): Western blot of ATR activation and inhibition by 4NQO ± VE-821 in NIH-OVCAR3 cells. Densitometry value to nearest whole number given under each band. The blots were cut at appropriate molecular weight markers before chemiluminescent detection of protein bands.

Figure S5. Figure 3C (Original western blot images): Western blot of baseline protein expression in panel of ovarian cancer cell lines. Densitometry calculated using ImageJ software, value given is AUC – background to 1 decimal place. The blots were cut at appropriate molecular weight markers before chemiluminescent detection of protein bands.

Table S1. Cisplatin sensitivity. Cells were exposed to cisplatin for 48 hrs then medium was replaced with drug free medium for up to 21 days to allow colony formation. Data are the mean and standard deviation of at least three independent experiments in NIH-OVCAR3 cells and the mean and standard deviation of two comparative ovarian cancer cell lines.

Cell Line	Cisplatin LC ₅₀ ± SD (µM)
NIH-OVCAR3	0.18 ± 0.08
2 ovarian cancer cell lines	0.70 ± 0.32

Table S2. Additional drug sensitivity. Cells were exposed to doxorubicin, gemcitabine, paclitaxel or Table 24. hrs then medium was replaced with drug free medium for up to 21 days to allow colony formation. Data are the mean and standard deviation of at least three independent experiments in NIH-OVCAR3 cells and the mean and standard deviation of 12 comparative ovarian cancer cell lines.

Cell Line	Doxorubicin LC ₅₀ ± SD (nM)	Gemcitabine LC ₅₀ ± SD (nM)	Topotecan LC ₅₀ ± SD (nM)	Paclitaxel LC ₅₀ ± SD (nM)
NIH-OVCAR3	55.03 ± 1.97	41.55 ± 1.2	7.2 ± 0.36	2.71 ± 0.08
12 ovarian cancer cell lines	44.46 ± 15.54	28.69 ± 27.92	15.6 ± 9.32	3.37 ± 2.41

Table S3. Culture medium of additional 12 ovarian cancer cell lines used for comparison to the NIH-OVCAR3 cell line.

Cell lines	Culture Media
COV362	DMEM, 10% FBS
COV318	DMEM, 10% FBS
CAOV3	DMEM, 10% FBS
ES2	RPMI 1640, 10 % FBS
OAW42	RPMI 1640, 10 % FBS
A2780	RPMI 1640, 10 % FBS
CP70-B1	RPMI 1640, 10 % FBS + 200 µg/ml Hygromycin B
CP70-A2	RPMI 1640, 10 % FBS + 200 µg/ml Hygromycin B
IGROV1	RPMI 1640, 10 % FBS
UWB1.289	50% RPMI-1640 + 50% MEGM Bullet Kit medium
UWB1.289+BRCA1	50% RPMI-1640 + 50% MEGM Bullet Kit medium + 200 µg/ml G-418
NUCOLL43	RPMI 1640, 20 % FBS

Table S4. mRNA expression in platinum-sensitive and -resistant groups. Mean log-transformed RSEM values of 37 genes (gene expression data for RAD51D was not available) in the platinum sensitive and resistant subgroups from the TCGA pan-cancer cohort and the corresponding p-value for estimation of any statistically significant difference.

Gene name	Platinum-sensitive (Mean log2RSEM values)	Platinum-resistant (Mean log2RSEM values)	p-value
ATM	9.33	9.38	0.65
ATR	9.23	9.21	0.69
CHEK1	8.52	8.35	0.45
