

Supplementary Material

The CAM model for *CIC-DUX4* sarcoma and its potential use for precision medicine

Aoi Komatsu, Kotaro Matsumoto, Yuki Yoshimatsu, Yooksil Sin, Arisa Kubota, Tomoki Saito, Ayaka Mizumoto, Shinya Ohashi, Manabu Muto, Rei Noguchi, Tadashi Kondo and Fuyuhiko Tamanoi

Supplementary Table S1: CD292 cell lines used in this study

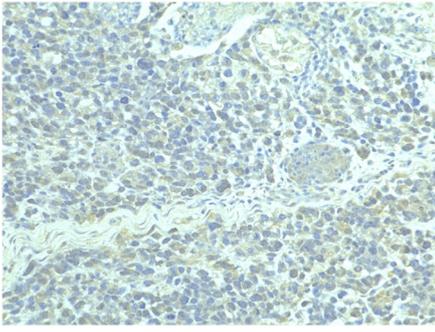

Cell line label	Patient records
CD-89A (NCC-CDS1-X1-C1)	29-year-old, female
CD-89C (NCC-CDS1-X3-C1)	29-year-old, female
CD-292 (NCC-CDS2-C1)	50-year-old, female

Supplementary Table S2: Primers used for the detection of the *CIC-DUX4* gene

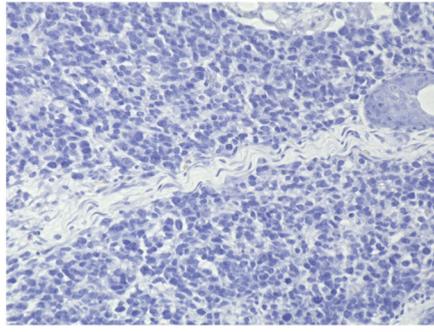

#	Sample name	Forward Primer Sequence (5'-----3')	Reverse Primer Sequence (5'-----3')	Enzyme
1	CAM tumor #3	ATCATGCAGGCTGCCACT	ATGCCTTGCATCTGCCC	Platinum Taq DNA Polymerase High Fidelity
2	CAM tumor #4	ATCATGCAGGCTGCCACT	ATGCCTTGCATCTGCCC	Platinum Taq DNA Polymerase High Fidelity
3	CD-292 cell line	ATCATGCAGGCTGCCACT	ATGCCTTGCATCTGCCC	Platinum Taq DNA Polymerase High Fidelity
4	Only CAM	ATCATGCAGGCTGCCACT	ATGCCTTGCATCTGCCC	Platinum Taq DNA Polymerase High Fidelity
5	CAM organoid	ATCATGCAGGCTGCCACT	ATGCCTTGCATCTGCCC	KOD-Plus-Neo DNA polymerase
6	CD-292 TP-10 (Passage tumor)	GGGGACATCTTCACCTTTGA	CCAGGAAAGAATGGCAGTTC	Platinum Taq DNA Polymerase High Fidelity

Supplementary Figure S1

Fibroblast

Negative control

CAM tumor derived from CIC-DUX4 sarcoma cells was stained for the presence of fibroblast using C1 antibody as described in Materials and Methods. Negative control shows staining without the antibody. A scale bar represents 0.05 mm.
