

Supplemental Figure S1. Localization of pcDNA3.1/HisC-AGAP2 in CHO-IIA cells. CHO-IIA cells transiently transfected with pcDNA3.1/HisC-AGAP2 were labeled with anti-AGAP2 antibody 1/250 (left panel) or with the pre-immune serum at the same concentration (right panel). Cells were examined under confocal microscopy at the same settings and a single confocal cross section of cells is represented. Bars, 20 μ m.
