

Supplementary Figure S1 – Ulk1 vs phosphorylated ULK1

Supplementary Figure S1. Identification of a post-translational modification of ULK1 in the transgenic SCA3 zebrafish. Protein samples of SCA3 zebrafish larvae aged 6 days post fertilization were immunoblotted and probed for phospho-ULK1 (ser777) and ULK1. Highlighted in red, the bands indicating phospho-ULK1 overlap with the 120 kDa band seen in the ULK1 membrane.
