GFP: green fluorescent protein

TEV: Tobacco Etch Virus protease cleavage site

Supplementary Table 2. Solubilization of selected human TRP channels. Two zwitterionic detergents (FC-12 and FC-16) and three non-ionic detergents (DDM, DM and LMNG) were used in solubilization screen. Solubilization efficacies (%) in FC-12 (at a concentration of 1 %), FC-16 (1 %), DDM (2 %), DM (2 %) and LMNG (2%) of crude *S. cerevisiae* membranes for selected TRP channels are shown. Solubilization was performed for 2 h at 4 °C and GFP fluorescence of the solubilized material (supernatant following ultracentrifugation) was used to calculate the percentage of extraction.

Target	Detergent	Concentration, %	Solubilization efficacy, %
TRPC4	FC-12	1	98,73
	FC-16	1	64,91
	DDM	2	43,40
	LMNG	2	29,09
TRPV3	FC-12	1	96,76
	FC-16	1	74,91
	DM	2	43,40
	LMNG	2	29,09
TRPML2	FC-12	1	85,09
	FC-16	1	47,33
	DDM	2	18,26
	LMNG	2	11,28
TRPM8	FC-12	1	95,09
	FC-16	1	84,73
	DDM	2	20,26
	LMNG	2	11,28
