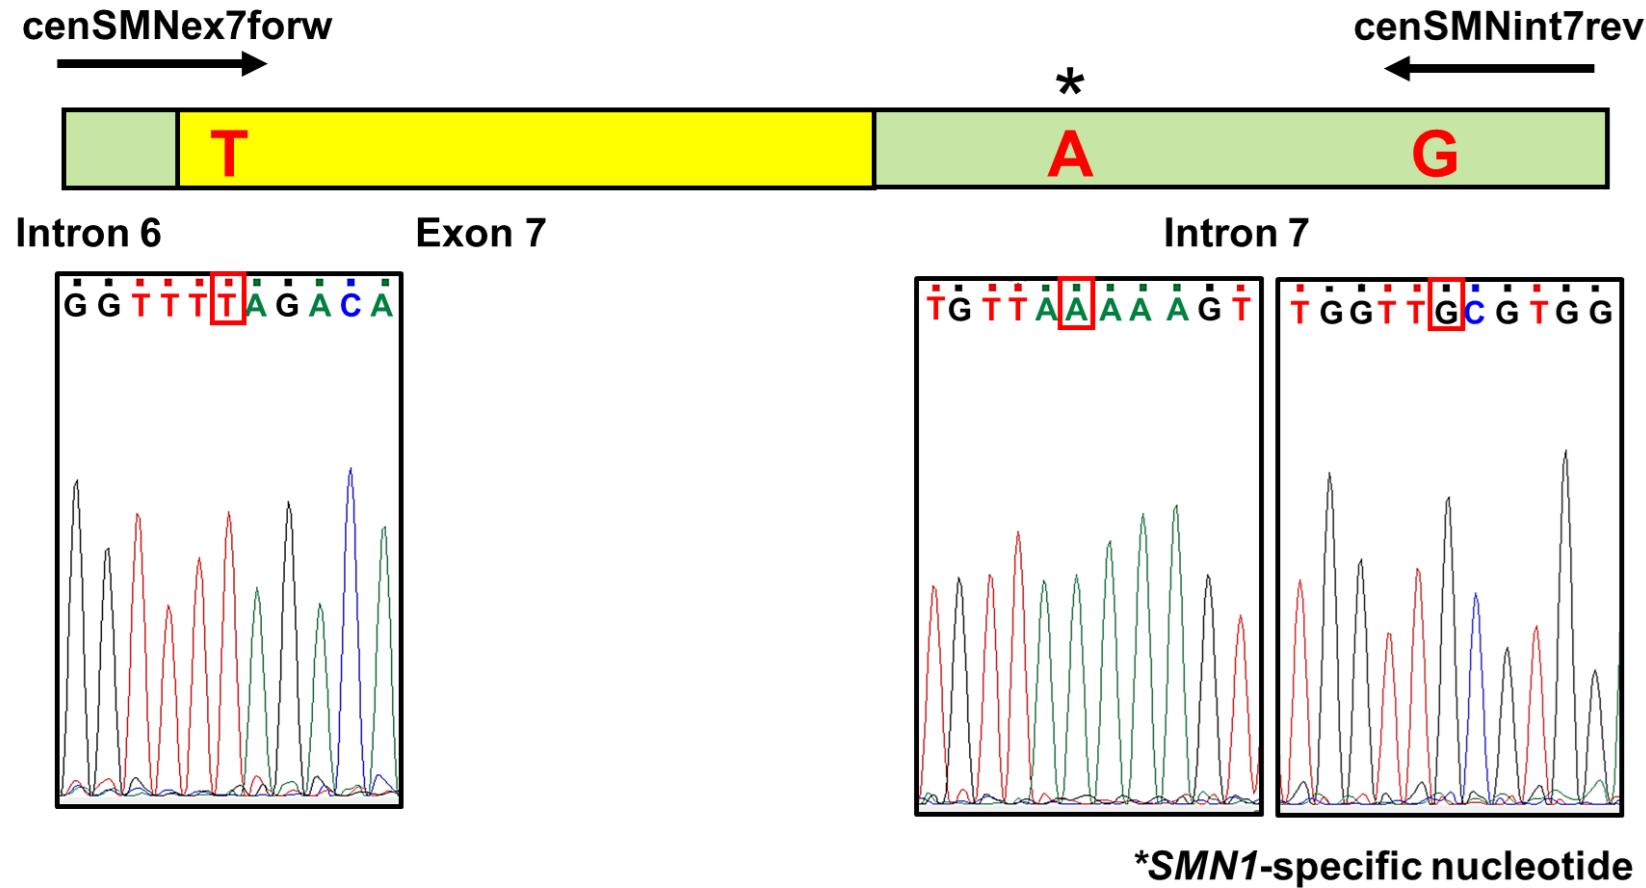

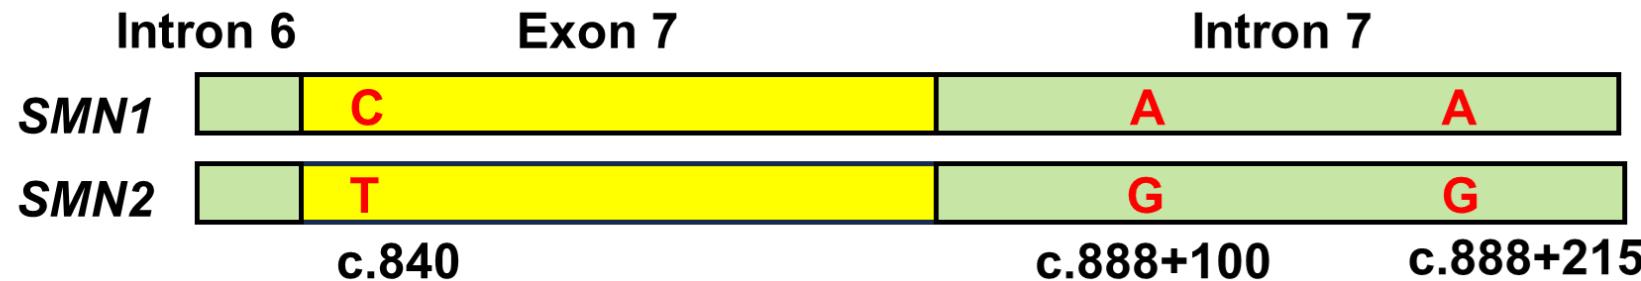

Figure S1. Sequencing analysis of amplified PCR products from DBS with *SMN2* deletion. PCR product from DBS with *SMN2* deletion showed the presence of an *SMN1*-specific nucleotide.

(1) Real-time PCR: Nucleotide sequences of *SMN1* and *SMN2*

(2) Real-time PCR: Amplified PCR products from DBS with *SMN2* deletion

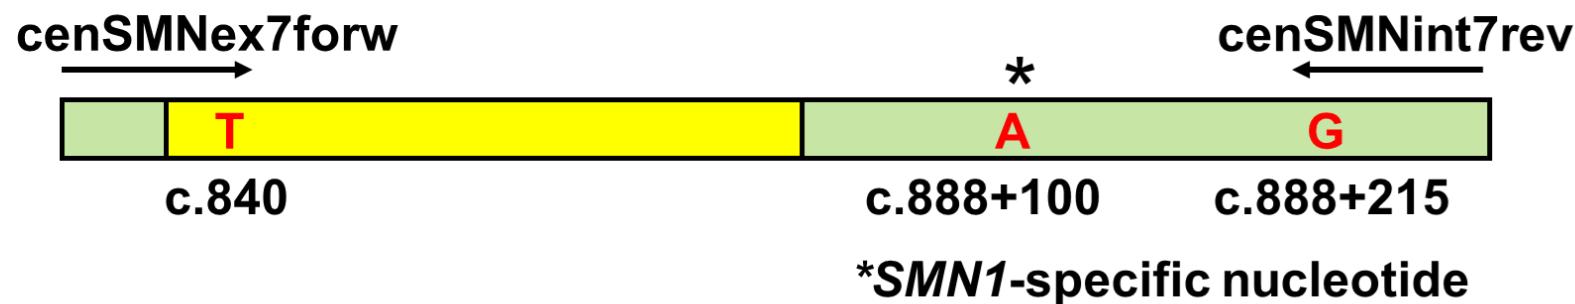

Figure S2. An *SMN1*-specific nucleotide identified in false-negative PCR products. *SMN2*-specific primers can amplify *SMN1* sequences by mis-annealing of the primers to *SMN1* sequence under some conditions including low annealing temperature.
