

Supplementary Materials: Genetic Contribution to Alcohol Dependence: Investigation of a Heterogeneous German Sample of Individuals with Alcohol Dependence, Chronic Alcoholic Pancreatitis, and Alcohol-related Cirrhosis

Jens Treutlein, Josef Frank, Fabian Streit, Céline S. Reinbold, Dilafruz Juraeva, Franziska Degenhardt, Liz Rietschel, Stephanie H. Witt, Andreas J. Forstner, Monika Ridinger, Jana Strohmaier, Norbert Wodarz, Helene Dukal, Jerome C. Foo, Per Hoffmann, Stefan Herms, Stefanie Heilmann-Heimbach, Michael Soyka, Wolfgang Maier, Wolfgang Gaebel, Norbert Dahmen, Norbert Scherbaum, Bertram Müller-Myhsok, Susanne Lucae, Marcus Ising, Felix Stickel, Thomas Berg, Susanne Möbus, Karl-Heinz Jöckel, Henrike Scholz, Ulrich S. Zimmermann, Stephan Buch, Wolfgang H. Sommer, Rainer Spanagel, Benedikt Brors, Sven Cichon, Karl Mann, Falk Kiefer, Jochen Hampe, Jonas Rosendahl, Markus M. Nöthen, and Marcella Rietschel

Figure S1. Regional association plot of the alcohol dehydrogenase gene region in the combined sample. The strongest variant in this region, rs1789891, is located within +/-20kb of *ADH1B* and *ADH1C*, and therefore contributes to the gene-based *P*-values of both genes.

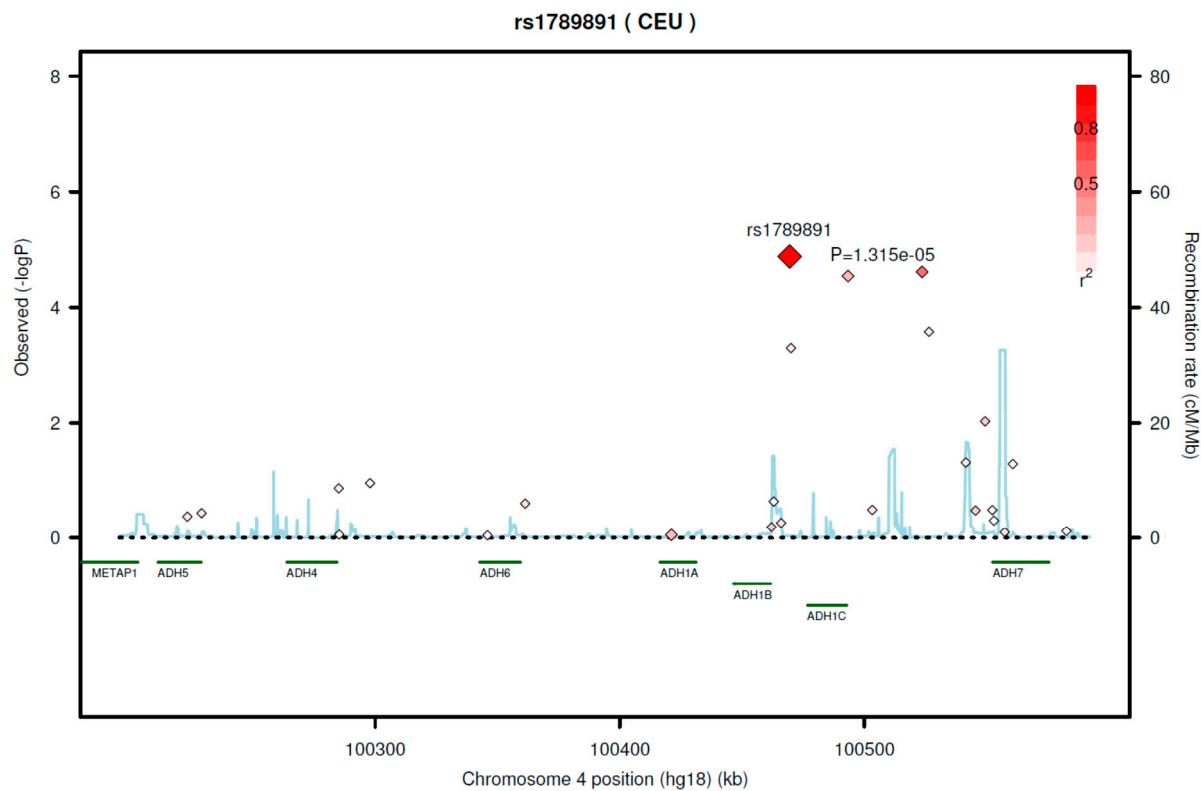

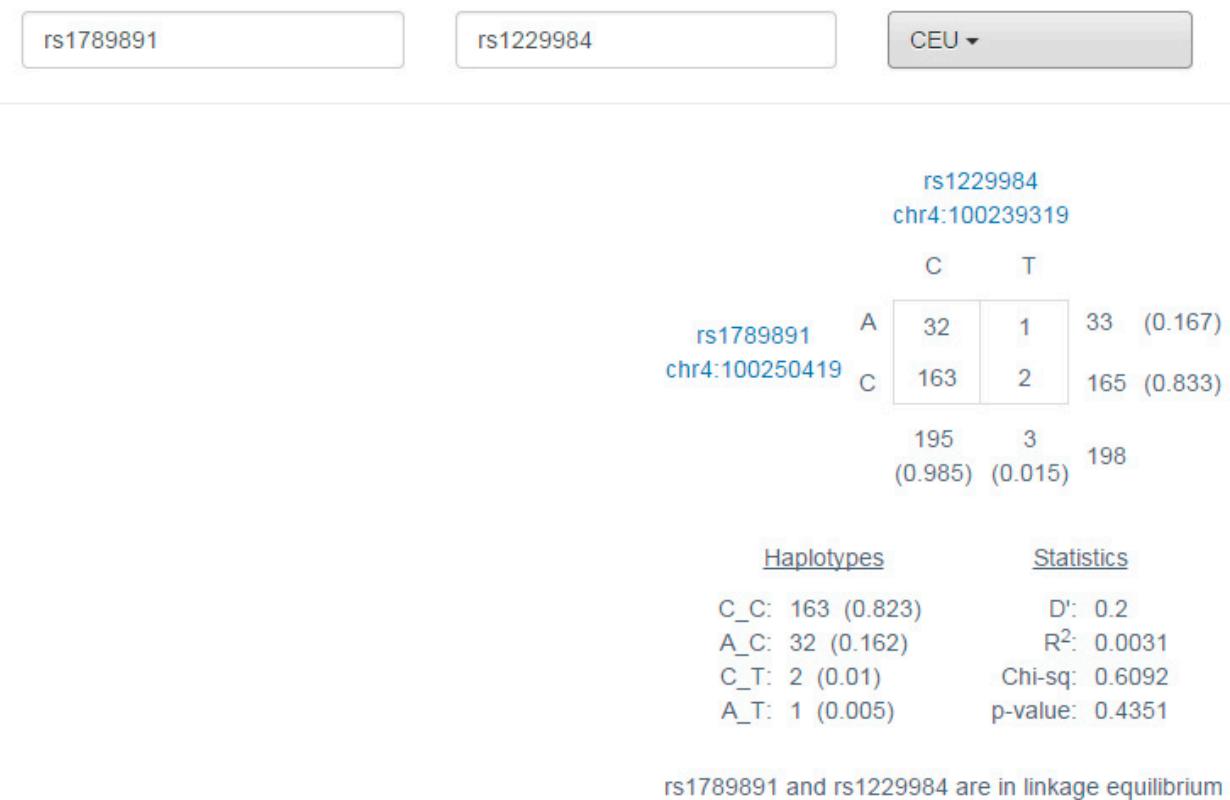

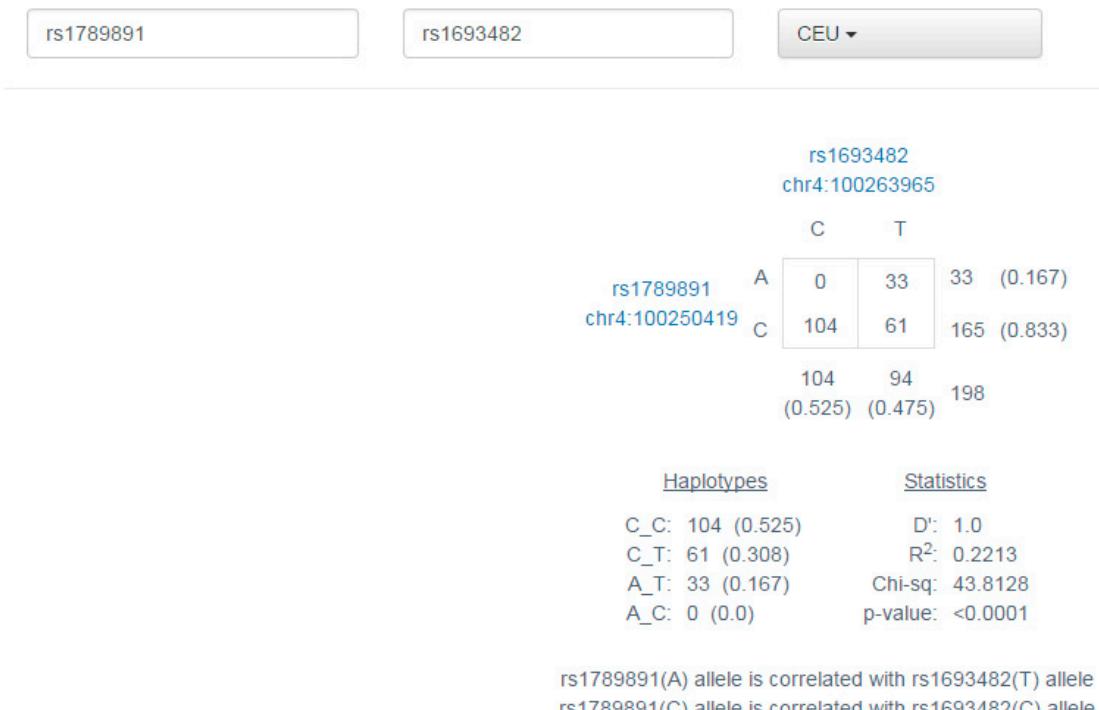

Figure S2. Linkage disequilibrium between: (a) rs1789891 and rs1229984 (*ADH1B*_Arg48His); (b) rs1789891 and rs1693482 (*ADH1C*_Arg272Gln); and (c) rs1789891 and rs698 (*ADH1C*_Ile350Val) (<https://analysis-tools.nci.nih.gov/LDlink/?tab=ldpair>; 1000 Genomes Phase 3 data).

- (a) The rs1229984 A-allele containing nucleotide triplet codes for the amino acid histidine (His), resulting in an *ADH1B* enzyme with an increased rate of turnover (opposite strand sequence of the rs1229984 T-allele in the figure below: CAC coding for His; https://www.ncbi.nlm.nih.gov/projects/SNP/snp_ref.cgi?rs=1229984). Linkage disequilibrium between rs1789891 and rs1229984 is low.

- (b) The rs1693482 C-allele containing nucleotide triplet codes for the amino acid arginine (Arg), which results in an ADH1C enzyme with an increased rate of turnover (opposite strand sequence of the rs1693482 C-allele in the figure below: **C_{GG}** coding for Arg; https://www.ncbi.nlm.nih.gov/projects/SNP/snp_ref.cgi?rs=1693482). The rs1789891 “protective” C-allele is correlated with the rs1693482 “protective” C-allele.

- (c) The rs698 A-allele containing nucleotide triplet codes for the amino acid isoleucine (Ile), which results in an ADH1C enzyme with an increased rate of turnover (opposite strand sequence of the rs698 T-allele in the figure below: **A_{TT}** coding for Ile; https://www.ncbi.nlm.nih.gov/projects/SNP/snp_ref.cgi?rs=698). The rs1789891 “protective” C-allele is correlated with the rs698 “protective” T-allele.

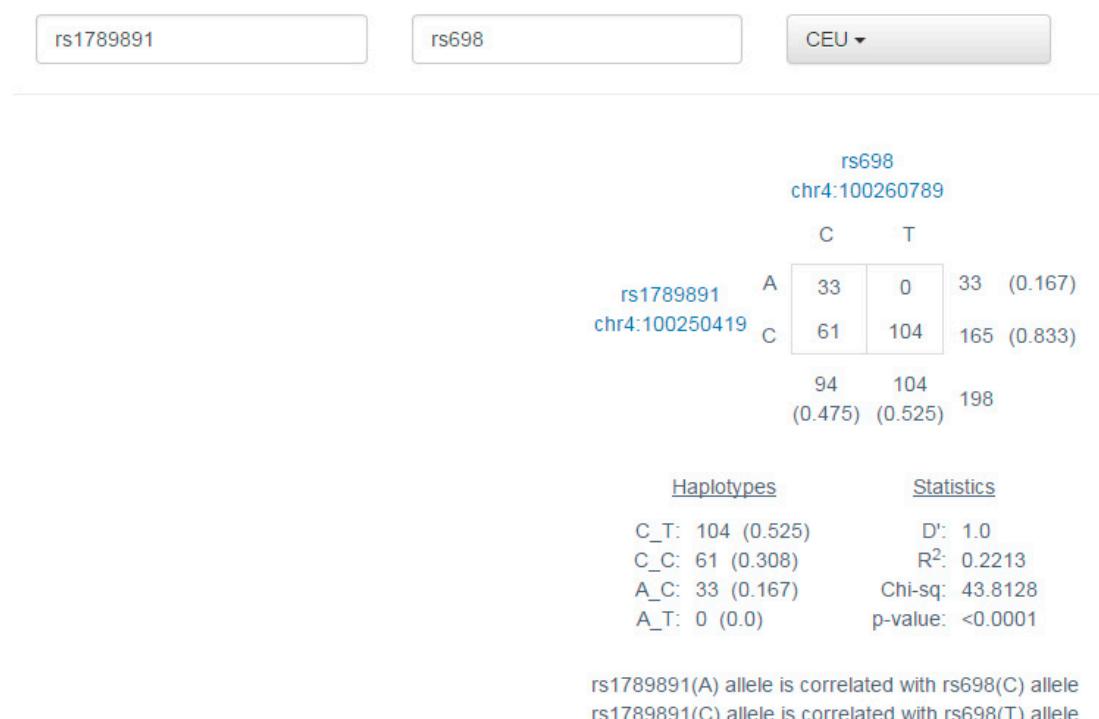

Table S1. Top SNPs from the single marker analysis in the combined sample, and their respective P-values in the subsamples. SNPs with $P_{\text{uncorrected}} < 1.00e-04$ are shown. SNP: Single Nucleotide Polymorphism; OR: Odds Ratio. MAF: minor allele frequency; AD: alcohol dependence; ACP: chronic alcoholic pancreatitis; ALC: alcohol-related cirrhosis; Chr: chromosome.

Gene (RefSeq)	Chr	SNP	Position	Effect allele in the combined sample	Combined sample (2841 cases, 3684 controls);		ACP+ALC subsample (1510 cases, 1750 controls)		AD subsample (1331 cases, 1934 controls)	
					P-Value [OR]	Genotype counts: All (MAF), Affected (MAF), Unaffected (MAF)	P-Value [OR]	Genotype counts: All (MAF), Affected (MAF), Unaffected (MAF)	P-Value [OR]	Genotype counts: All (MAF), Affected (MAF), Unaffected (MAF)
