NOTE. PM, particulate matter; CI, confidence interval

* EI_r is the log transformation of the emphysema index.

⁺1-year: annual average PM_{2.5} concentrations for the previous one year at the time of enrollment from the baseline examination.

⁺⁺3-year: annual average PM_{2.5} concentrations for the previous three year at the time of enrollment from the baseline examination.

[#]5-year: annual average PM_{2.5} concentrations for the previous five year at the time of enrollment from the baseline examination.

Adjusted for age, gender, education, height, weight, smoking, pack-years, medication use, asthma history, and annual average PM_{2.5} concentration for survey year.

Table S2. Image measurements & PM_{2.5} concentration (per 5 ug/m³ increase) by overweight/obese.
