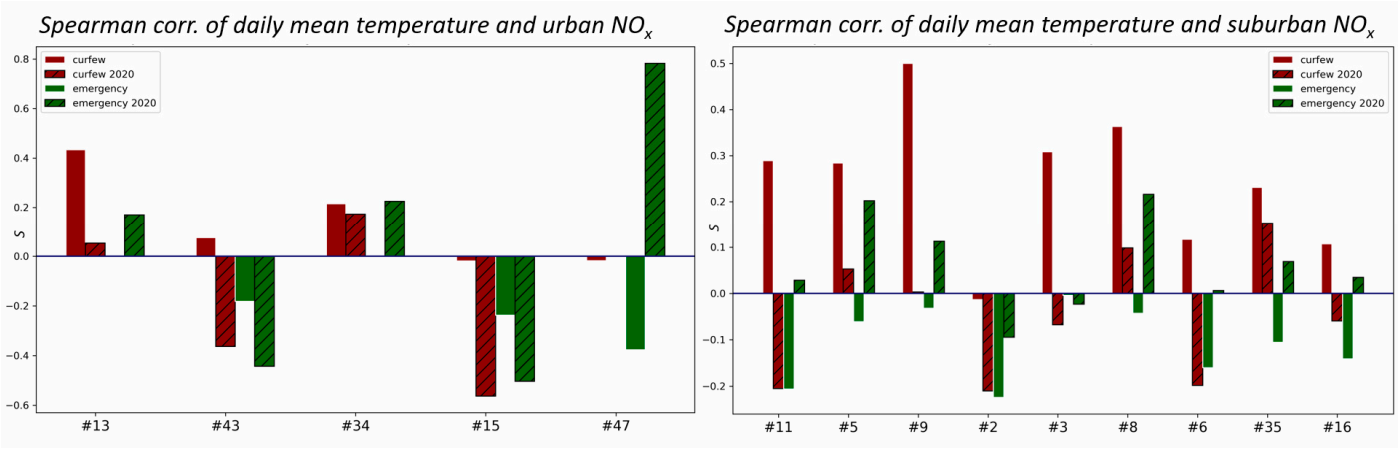

Figure S1. Spearman correlation between daily mean temperature and NO_x concentrations at selected urban (left) and suburban (right) monitoring sites. Solid red column: correlation in the curfew period 28 March – 4 May in the years 2014–2019. Solid green column: correlation in the emergency period 12 March – 16 June in the years 2014–2019. Striped columns: correlations obtained for the respective period in the year 2020.

Table S1. Spearman correlations and corresponding p-values between daily mean temperature and NO_x concentrations at selected monitoring sites in the years 2014–2019.

	Spearman correlation (p-value)	
Station	**Curfew period (28 March – 4 May)**	**Emergency period (12 March – 16 June)**
#12	*0.34 (<0.001)*	-0.06 (0.20)
#10	0.13 (0.16)	0.02 (0.76)
#13	*0.43 (<0.001)*	-0.002 (0.97)
#11	*0.29 (<0.001)*	*-0.21 (<0.001)*
#5	0.28 (0.09)	-0.06 (0.56)
#9	*0.50 (<0.001)*	-0.03 (0.47)
#2	-0.01 (0.93)	*-0.22 (0.03)*
#3	*0.31 (0.007)*	-0.004 (0.95)
#8	*0.36 (<0.001)*	-0.04 (0.49)
#6	0.12 (0.08)	*-0.16 (<0.001)*
#43	0.07 (0.26)	*-0.18 (<0.001)*
#35	*0.23 (<0.001)*	*-0.11 (0.02)*
#34	*0.22 (0.002)*	0.0006 (0.99)
#36	*0.16 (0.03)*	*-0.17 (<0.001)*
#15	-0.02 (0.77)	*-0.24 (<0.001)*
#16	0.11 (0.11)	*-0.14 (<0.001)*
#47	-0.02 (0.78)	*-0.38 (<0.001)*

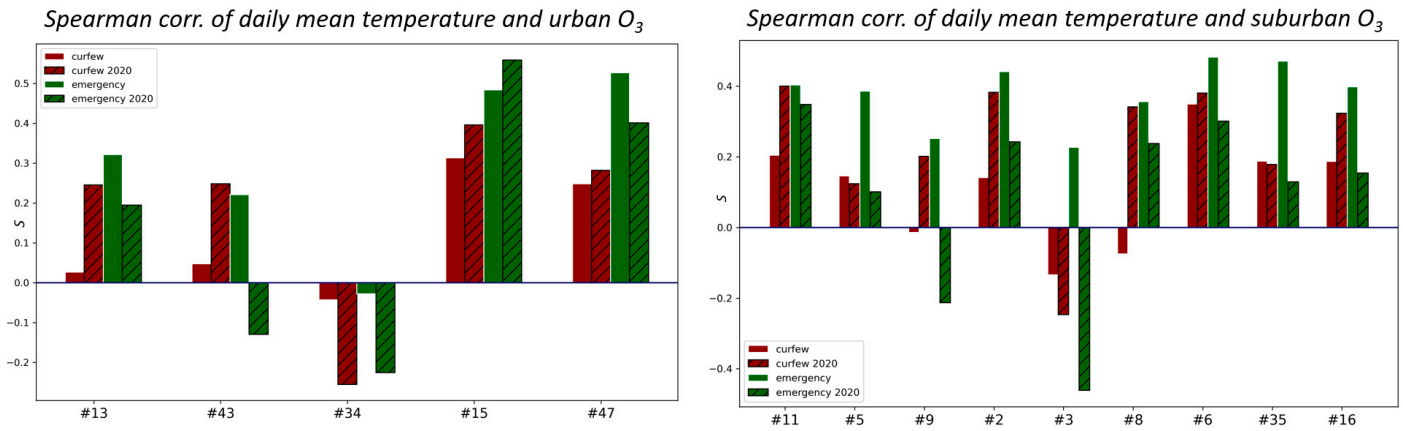

Figure S2. Spearman correlation between daily mean temperature and O_3 concentrations at selected urban (left) and suburban (right) monitoring sites. Solid red column: correlation in the curfew period 28 March – 4 May in the years 2014–2019. Solid green column: correlation in the emergency period 12 March – 16 June in the years 2014–2019. Striped columns: correlations obtained for the respective period in the year 2020.

Table S2. Spearman correlations and corresponding p-values between daily mean temperature and O_3 concentrations at selected monitoring sites in the years 2014–2019.

	Spearman correlation (p-value)
