AG_FC/CG_FC, the change of functional connectivity between amygdala and right orbitofrontal cortex in acute exercise group or control group;

Table S4. Voxel-wised functional connectivity of bilateral amygdala to other brain regions.

Seed ROI	Cluster	Regions	Peak Coordinate (X Y Z)	Cluster Size (Voxels)	Peak Intensity (t value)
Right Amygdala	Cluster 1	right middle frontal gyrus (orbital part)	30 54 -6	42	6.26843
		right superior frontal gyrus (orbital part)			
	Cluster 2	right superior frontal gyrus (dorsolateral)	15 12 57	15	5.72954
		right supplementary motor area			
	Cluster 3	right median cingulate	12 15 33	11	5.42893
		left inferior frontal gyrus (orbital part)			
	Cluster 4	left middle frontal gyrus (orbital part)	-33 42 -3	9	6.22811
		right middle frontal gyrus (orbital part)			
Left Amygdala	Cluster 1	rights superior frontal gyrus (orbital part)	30 51 -3	9	4.76529

All were corrected for multiple comparisons with the Gaussian Random Field (GRF) theory ($p < 0.001$ at voxel-level, $p < 1$ at cluster level, two-tailed). Only the FC between right amygdala and Cluster 1 was statistically significant ($p < 0.01$ at cluster level).

Table S5. FC intensity and significant level before and after intervention in all participants and the acute exercise group.

The functional connection between the amygdala and the right orbitofrontal cortex was examined by a one sample t test.

Table S6. Correlations between changed FC, affect scores, and HR.
