

Supporting Information

Figure S1. Randomized block design with five replications.

TREATMENT - 66,00m²
BLOCK (1-5) - 330,00m²
PLANTED AREA - 1.980,00m² (0,1980 ha)
TOTAL AREA - 3.242,00m² (0,3242 ha)

Table S1. Results of Total Recoverable Sugar (TRS) analyses for each treatment (T).

	T1	TRS	T2	TRS	T3	TRS	T4	TRS	T5	TRS	T6	TRS
28/11/2019	B1	150.13	B1	157.91	B5	143.9	B1	158.83	B2	157.66	B1	163.21

*B - Block

Figure S2. (A) Base peak chromatogram (BPC) in negative ion mode of T1 (collection 4). (B). 2D Expansion showing the main ions present in sugarcane stem extract between 4–7.0 min by HPLC-DAD-ESI-MSⁿ.

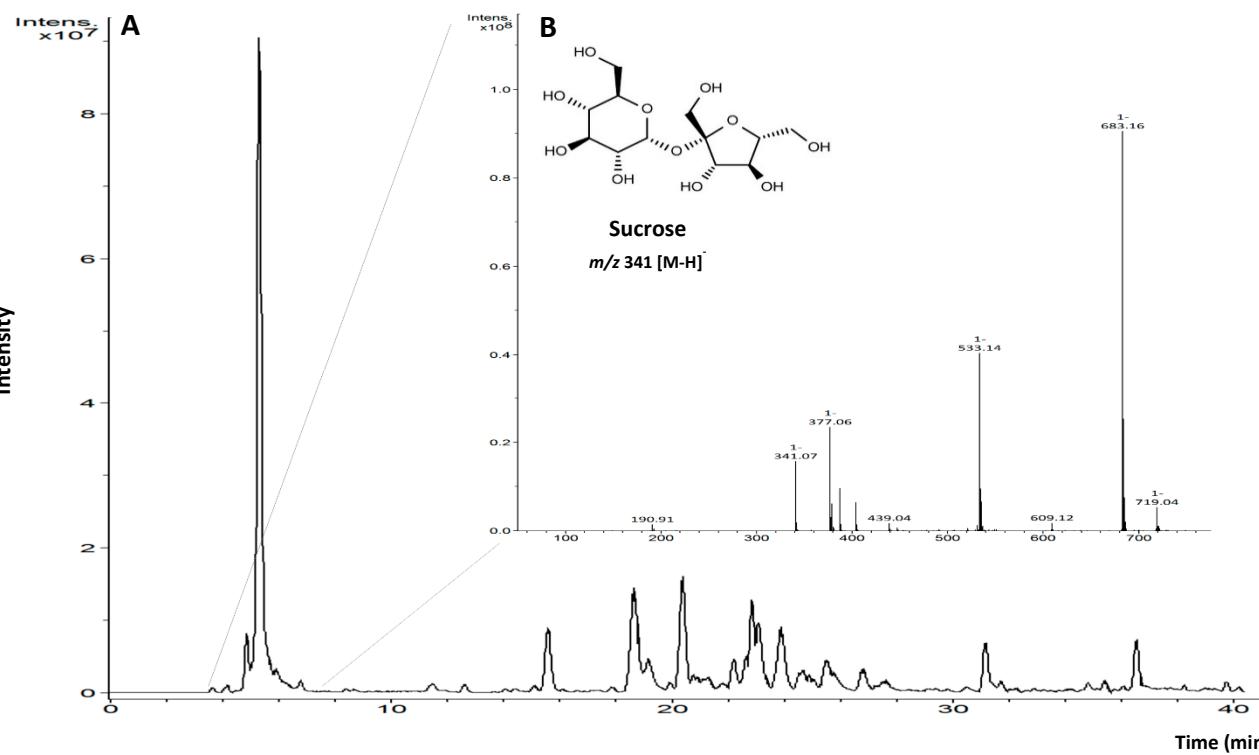

Figure S3. Expansion of the Base peak chromatogram (BPC) in negative ion mode between 4–7.0 min of T1 to T6. (collection 4) by HPLC-DAD-ESI-MSⁿ.

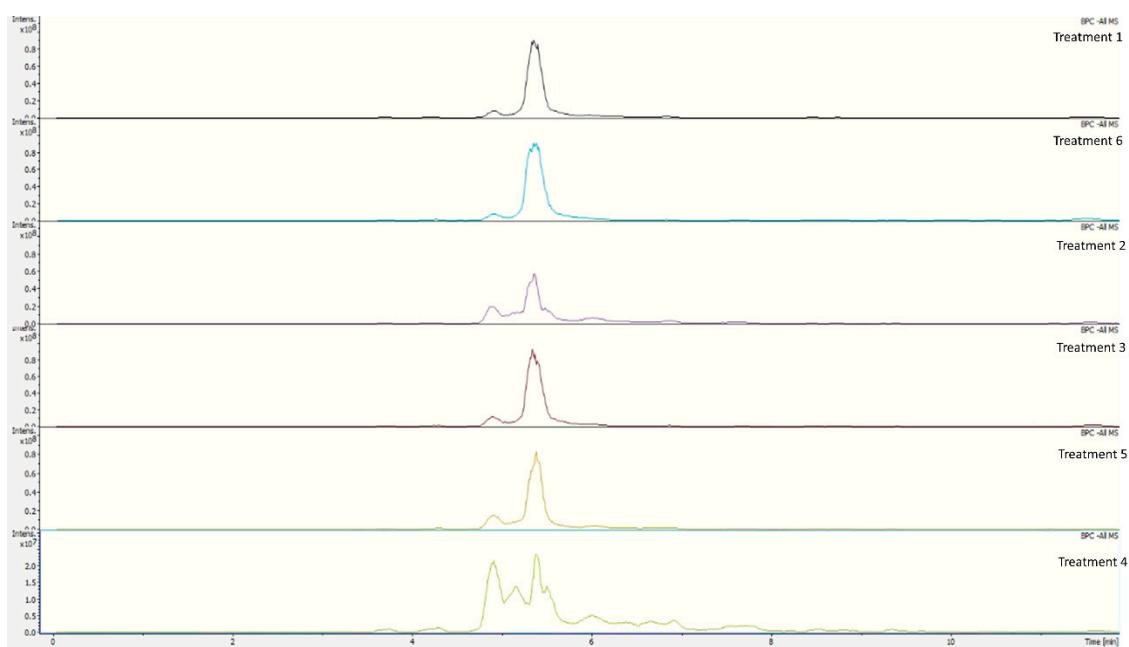

Figure S4. Graph of PCA scores (**left**) and loadings plots (PC1 vs. PC2) (**right**) for treatments 2 (red) and 4 (blue) analyzed by mass spectrometry.

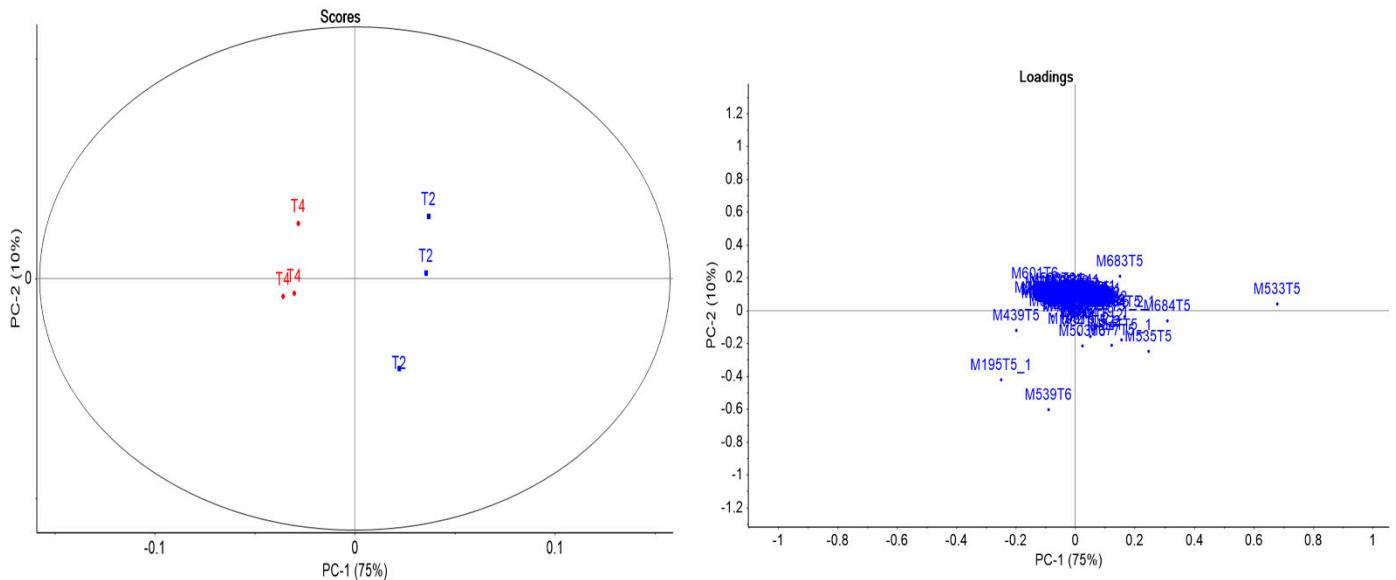

Figure S5 Graph of PCA scores (**left**) and loadings plots (PC1 vs. PC2) (**right**) for treatments 3 (red) and 6 (green) and 1 (blue) analyzed by mass spectrometry.

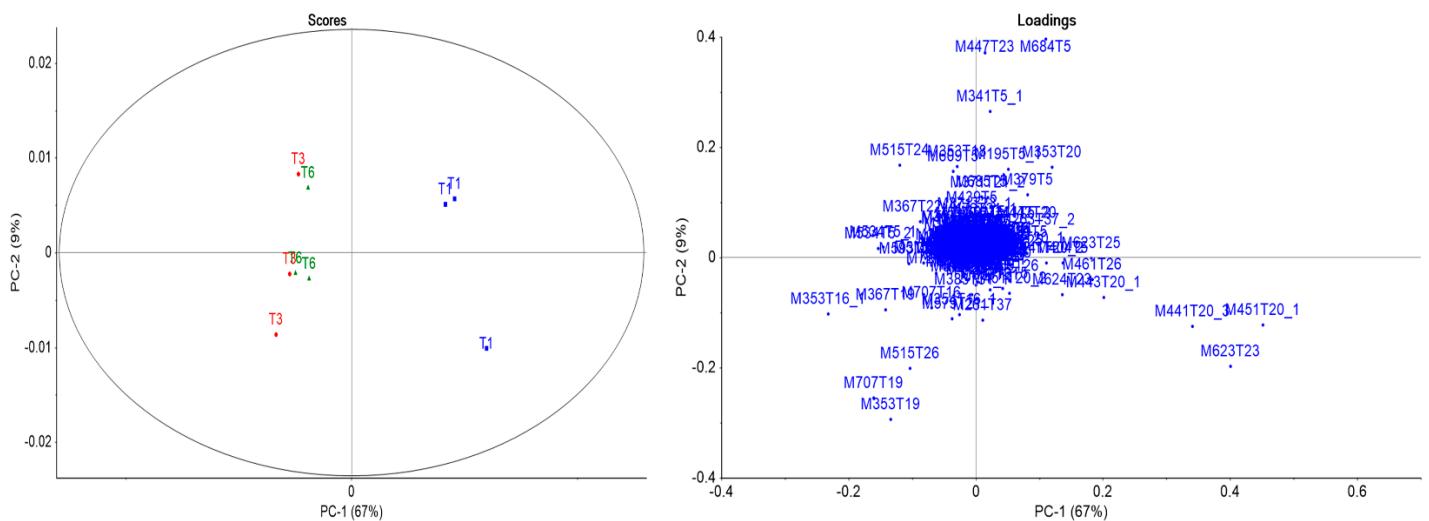

Figure S6. Graph of PCA scores (**left**) and loadings plots (PC1 vs. PC2) (**right**) for treatments 3 (blue) and 6 (red) analyzed by mass spectrometry.

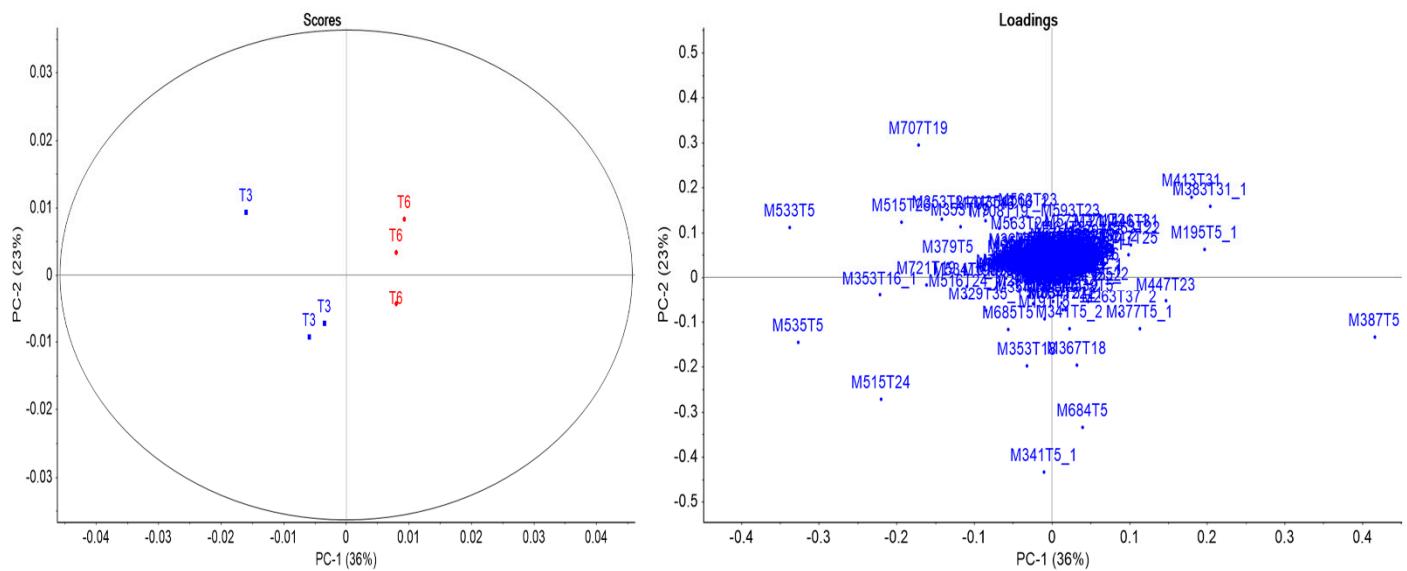

Figure S7. HRMS spectra of the main features annotated and listed in table 3. All the figures contain the molecular formula and retention time of each feature.
