

- Antennal segment 2 equal to 3
- Antennal segment 3 longer than 2

**Figure S2.** Phylogenetic tree reconstructed with IQ-TREE method based on amino acids of 13 PCGs-AA (18 species) under MFP + MERGE model. Newly sequenced species in this study are highlighted in red color. The numbers above nodes in the tree are the SH-aLRT (left) and bootstrap values (right). Tips of synonymous species are highlighted in black color. Different colored back-grounds represent the different genera.
