

Figure S1. NAb titers distribution of different ages at two intervals. NAb titers were log₂ processed. *P* values were determined with a two-tailed One-way ANOVA. NAb: neutralizing antibodies; ANOVA: analysis of variance.

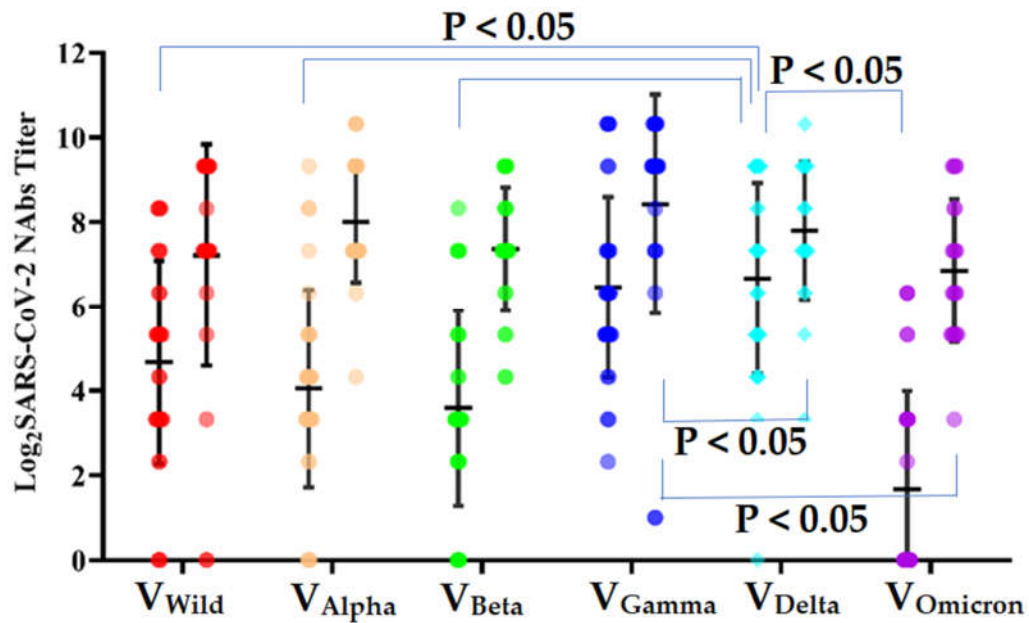

Figure S2. The NAb titers in the cross-reactive test. The first and second columns of each horizontal coordinate point presented *S*_{Delta} and *S*_{Omicron}, respectively. NAb titers were log₂ processed. *p* values were determined with a student's *t*-test. NAb: neutralizing antibodies.
