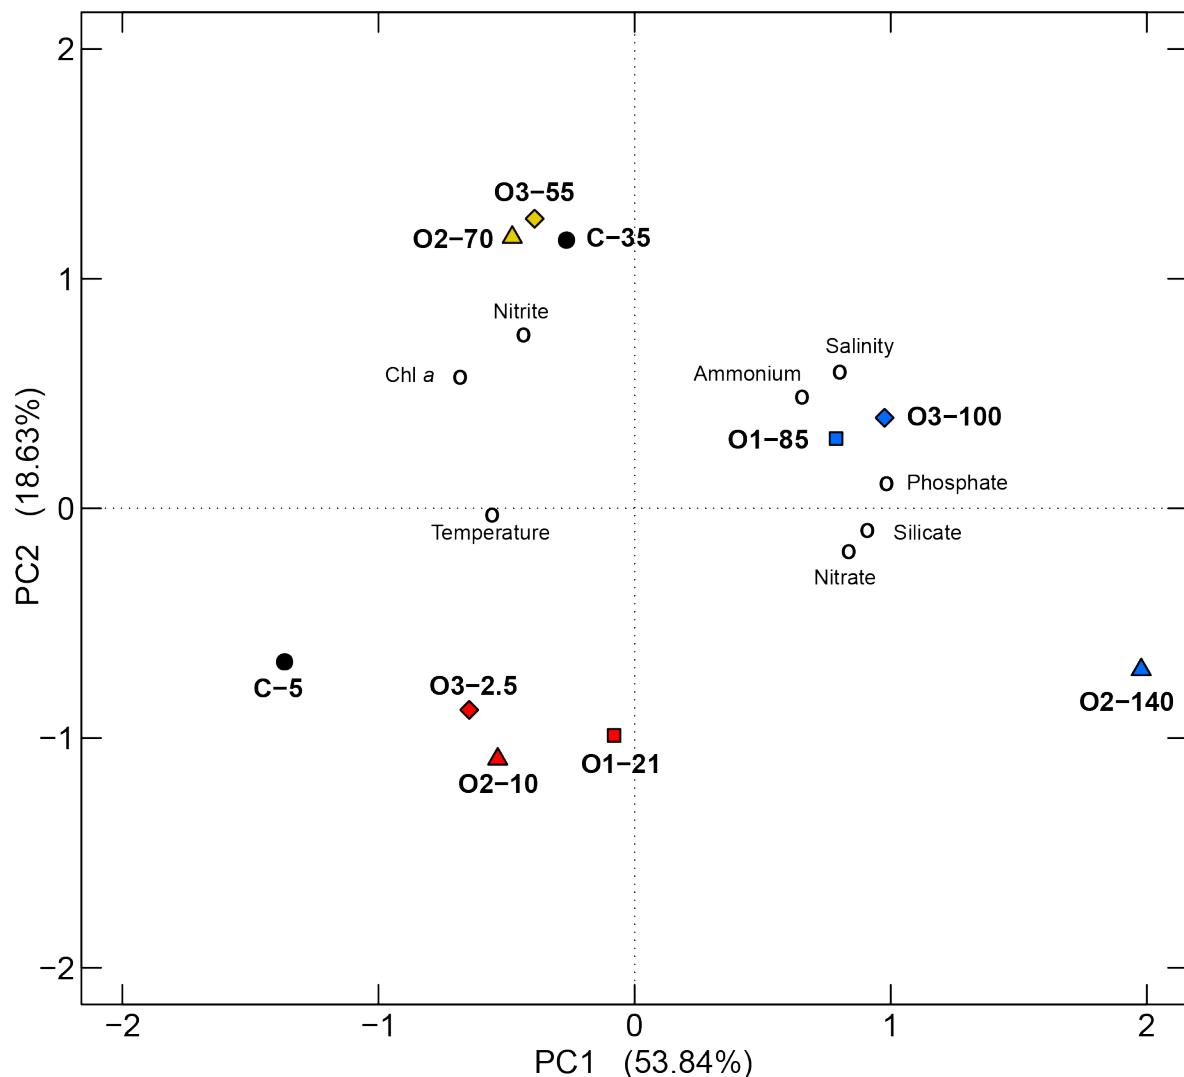

Figure S1. Principal component analysis (PCA) based on the physical and chemical properties of 10 samples. Sample O1-10 was not included due to lack of chemical data. The open circles represent the physical and chemical properties and the closed symbols represent the samples. The closed symbols are colored according to water mass: red, UPML; yellow, LPML; blue, PSW; black, coastal. The shapes represent different stations: C, circles; O1, squares; O2, triangles; O3, diamonds.

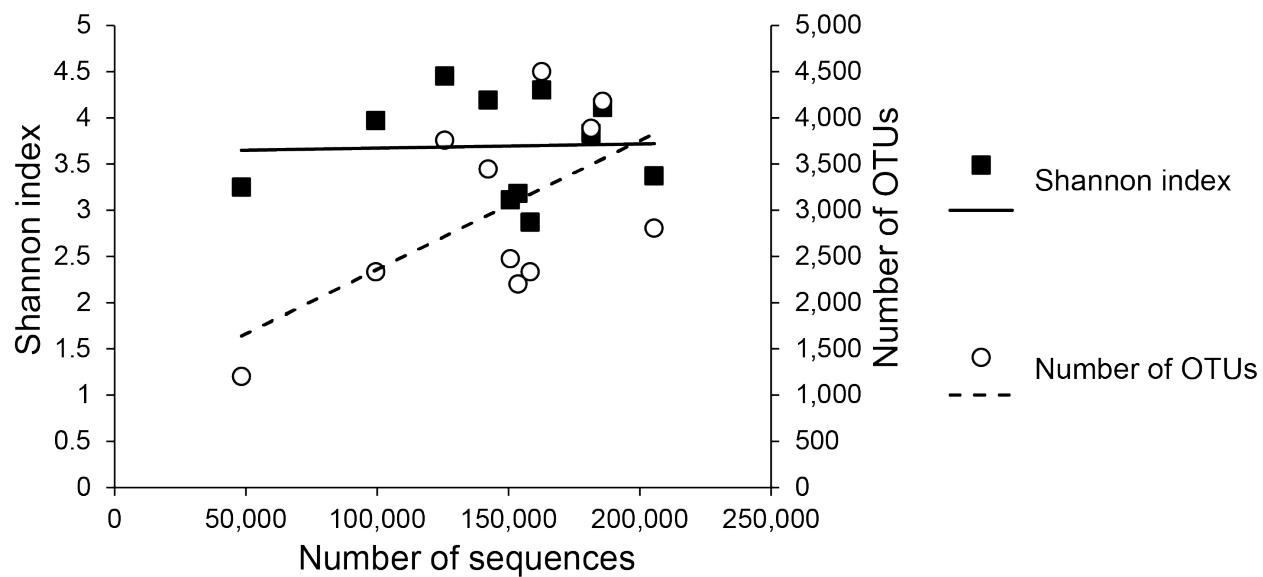

Figure S2. Relationship between sequencing effort and diversity metrics. The number of sequences included in the analyses for each sample are plotted against the number of OTUs (open circles) and the Shannon index (black squares).
